# Armenian Grid Infrastructure: ASNET AM Network

---

**ASNET-AM** was started to develop and realize since 1994 by the **Institute for Informatics and Automation Problems (IIAP NAS RA)**.

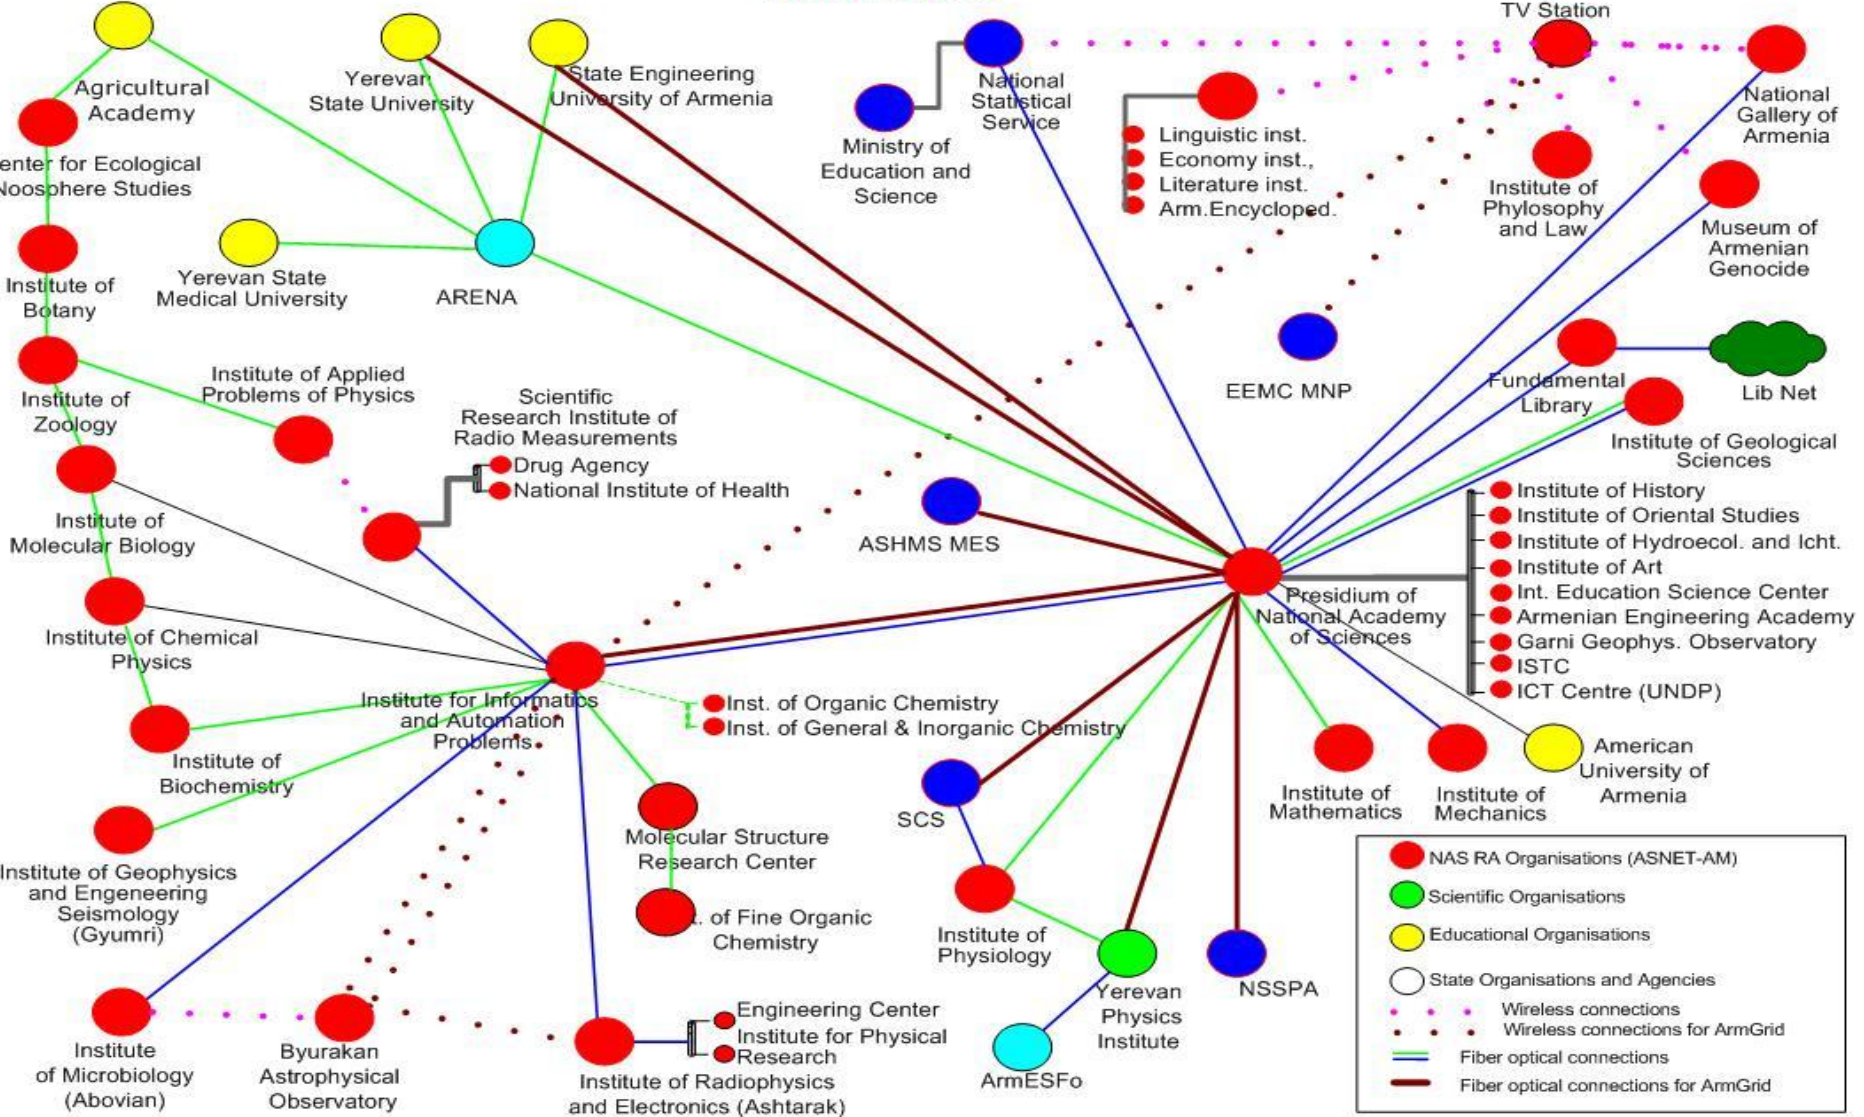

ASNET-AM interconnects scientific-research and educational organizations in the major cities of Armenia, such as Yerevan, Ashtarak, Byurakan, Abovian, Gyumri.

The international connection for ASNET-AM is provided by GEANT, as well as dedicated channel rented from the local telecom companies (Arminco, ADC).

ASNET-AM unifies more than 50 academic, research and educational organizations.

## The First High Performance Computational System (ArmCluster) in the South Caucasus

Date installed: 04.04.2004

- Nodes/Processors: 64/128
- Processor: Type: Intel Xeon 3.06.GHz
- Interconnect Type: Myrinet, Gigabit Ethernet
- Peak Performance: 783.36 Gflops
- Measured Performance: 523.6 Gflops

Cluster configuration  
64 nodes with two Xeon 3GHz processors

# Armenian National Grid Initiative: Goals

---

Agreement of Establishment of Armenian Grid Joint Research Unit  
was signed in September 2007

Main goals:

- To establish a Armenian Infrastructure presence in international Grid infrastructures.
- To develop local know-how and expertise on the development and operation of Grid technologies.
- To promote the uptake of Grid technologies in Armenia, the interconnection of existing and future resources, and the deployment of new applications.
- To support research in Grid and Global Computing.

# Armenian National Grid Initiative: Overview

- ArmNGI Foundation Kick-off meeting in October 2008.
- Governmental decision, 2010
- State Scientific Committee
- National Academy of Sciences
- State Engineering University of Armenia
- Yerevan State University
- Yerevan Physics Institute after A. Alikhanian
- Institute for Informatics and Automation Problems of the National Academy of Sciences
- Armenian e-Science Foundation

# Armenian National Grid Initiative: Activities

---

- Infrastructure Management and Operation
  - Grid service in Armenia as of 2008
  - Production-quality service as of 2009
- Certification Authority and User Access
  - Security and Digital Certificates (keys to the Grid)
- Application Deployment
  - Help Armenian scientists to gain access to and make use of the Grid
  - Invite and support local applications: medicine (IC), computer science, applied mathematics, chemistry, physics
- Training and Dissemination

# Armenian National Grid Initiative: Structures

ArmGrid software comprises:

- user tools (portals, systems for applications management and monitoring, result visualization and other purposes, compatible with the lower-layer software used in ArmGrid);
- software libraries;
- virtual organization systems: certificates, accounting, security;
- data management systems: metadata catalogues, replica management, file transfer;
- resource management systems: job management, applications, grid services and infrastructure monitoring, license management, local resource management.

- Armenian Grid Infrastructure
- Armenian National Grid Initiative
- **International and National Projects: Recent & Upcoming**
- Heavy User Communities

# International and National Projects: Introduction

**Overview: scientific data e-Infrastructure**

The diagram illustrates the layers of scientific data e-Infrastructure:

- scientific data infrastructure** (top layer)
- distributed computing/software infrastructure** (middle layer)
- network infrastructure, GÉANT** (bottom layer)

Scientific domains and projects shown include:

- Earth Obs
- Climate
- biology
- astro
- Chemistry
- IMPACT
- 4D4Life
- Geo-Seas
- GENESI-OR
- metafor
- EUROVO
- HELIO
- MMB
- driver
- SEALS
- fao

Logos for PESI, VAMDC, and the European Commission are also present.

## Creation of High-Performance Computation Cluster and Databases in Armenia (2003-2006)

### Participants

- Armenia - Institute for Informatics and Automation Problems, Yerevan Automated Control Systems Scientific Research Institute, Institute for Physical Research, National Survey for Seismic Protection of RA, Byurakan Astrophysical Observatory, Institute of Mathematics, Center of Scientific Information, Institute of Geological Sciences
- Georgia - Tbilisi State University

### Expected Main Results

- A system of intellectual software packages to support the advance in the field of modeling and analysis of quantum systems, signal and image processing, theory of radiation transfer, calculation of time constants for bimolecular chemical reactions. A system of mathematically proved methods, fast algorithms and programs for solving of certain classes of problems in linear algebra, calculus, algebraic reconditibility, test-checkable design of the built-in control circuits in the machine cluster environment
- Software environment for design and real-time verification of the Global Automatic Control Systems is based on primitives, where design and verification processes are integrated. The proposed methods will be tested on a specific ACS. Separate components (such as access-classification system design means for distributed users) may be used independently.

## Creation of Armenian State Experimental Computing System (2005-2006)

### Participants

- Institute for Informatics and Automation Problems, NAS RA; Yerevan State University (YSU); State Engineering University of Armenia (SEUA); Linguistic Institute, NAS RA

### Main Results

- Providing network interaction between distributed computing resources of IIAP NAS RA, YSU and SEUA, realization of experimental fragment and development of software.
- Development of Armenian UNL module, as well as multilingual modules.

# International and National Projects: Recent

**BSI (Black Sea Interconnection)** project intends bridging the digital divide that exists between the South Caucasus countries and Europe by establishing a regional research and education network in the South Caucasus and connecting it to GÉANT2.

The project involves the development of strategies for interconnecting the existing infrastructures in the region, realization of the connections and supplying operational support for the established network.

The existence of interconnections between the South Caucasus countries and connection to GÉANT2 with reasonable capacities will enable introduction of new services to the region and will be an important step towards the integration of the scientific potential in the region with Europe.

## Development of Scientific Computing Grid on the Base of Armcluster for South Caucasus Region (2007-2009)

### Participants

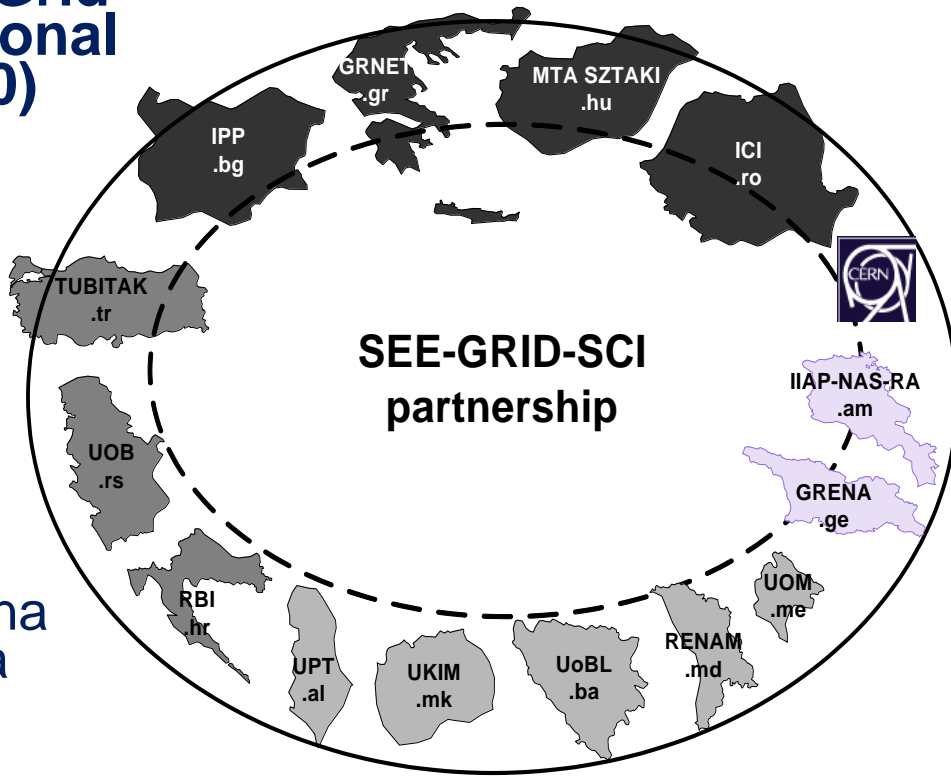

- Institute for Informatics and Automation Problems NAS RA; Yerevan State University; State Engineering University of Armenia; Institute of Radiophysics and Electronics NAS RA; Byurakan Astrophysical Observatory NAS RA; Institute for Physical Research NAS RA

### Main Results

- General framework in the following R&D areas: quantum physics, astrophysics, molecular dynamics, 3D periodic artificial microwave structures, IT infrastructure library performance, quantum 3D reactive scattering in the 3-body system, identification and recognition of objects from video images by using digital signal and image processing methods, two-dimensional cellular automata, decision-making and nonlinear boundary parallel algorithms.

## Development of Armenian-Georgian Grid Infrastructure and applications in the Fields of High Energy Physics, Astrophysics and Quantum Physics (2008-2010)

### Participants

- Armenia: Institute for Informatics and Automation Problems NAS RA; Yerevan Physics Institute; Yerevan State University; Byurakan Astrophysical Observatory NAS RA
- Georgia: Georgian Research and Educational Networking Association; Georgian E.Kharadze National Astrophysical Observatory; Ivane Javakhishvili Tbilisi State University

### Expected Main Results

- High Energy Physics: The calculation of NNLL QCD corrections for  $B \rightarrow X_s \gamma$  decay; Monte Carlo production for the HERMES; Determination of the spin structure of nucleon-nucleon interaction; Spin-filtering experiment; Astrophysics: Development of Armenian-Georgian Virtual Observatory; Quantum Physics: High performance computer modeling of quantum optical devices and microstructured Nonlinear Materials

## State Target Project entitled Deployment of Armenian National Grid Infrastructure (2010-2012)

### Participants

## **European Grid Initiative: Integrated Sustainable Pan-European Infrastructure for Researchers in Europe (39 EU countries + CERN) (2010-2014)**

Central to this proposal and key to coordinating an Integrated Sustainable Pan-European Infrastructure for Researchers in Europe (InSPIRE) is a new legal organisation EGI.eu which will be the lead partner in the EGI-InSPIRE project. Currently, being established in Amsterdam, EGI.eu's focus is coordinating the continued operation and expansion of today's production grid infrastructure that supports over 13,000 researchers, many of them already heavy users of the infrastructure, across diverse disciplines such as Earth Science, Astronomy & Astrophysics, Fusion research, Computational Chemistry, Materials Science, Life Sciences and High Energy Physics.

# International and National Projects: Recent

## High-Performance Computing Infrastructure for South East Europe's Research Communities (14 countries) (2010-2012)

HP-SEE focuses on a number of strategic actions. First, it will link existing and upcoming HPC facilities in the region in a common infrastructure, and provide operational solutions for it. As a complementary action, the project will establish and maintain GEANT link for Caucasus. Second, it will open this HPC infrastructure to a wide range of new user communities, including those of less resourced countries, fostering collaboration and providing advanced capabilities to researchers, with an emphasis on strategic groups in computational physics, chemistry and life sciences. Finally, it will ensure establishment of national HPC initiatives, and act as a SEE bridge for PRACE.

- **Armenian National Grid Initiative**
- **International and National Projects: Recent & Upcoming**
- **Heavy User Communities**

# Heavy User Communities: Life Sciences

A series of long simulations have been done including both biological and surfactant systems. Previously, a 150ns of MD simulation of human red blood erythrocyte membrane was carried out and the main structural and dynamical parameters were calculated and compared with existing experimental findings. The heterogeneous erythrocyte membrane model included two types of phospholipids with different hydrocarbon chains,

# Heavy User Communities: Numerical Weather Prediction

The Weather Research and Forecasting model implemented and operationally used for the territory of Armenia by Armenian State Hydrometeorological and Monitoring Service. Initial condition data is taken from Meteo (downloaded from National Center for Environmental Prediction) database and the results of calculations are stored in the forecast database.

Cloud ceiling

# Heavy User Communities: Environmental Protection

---

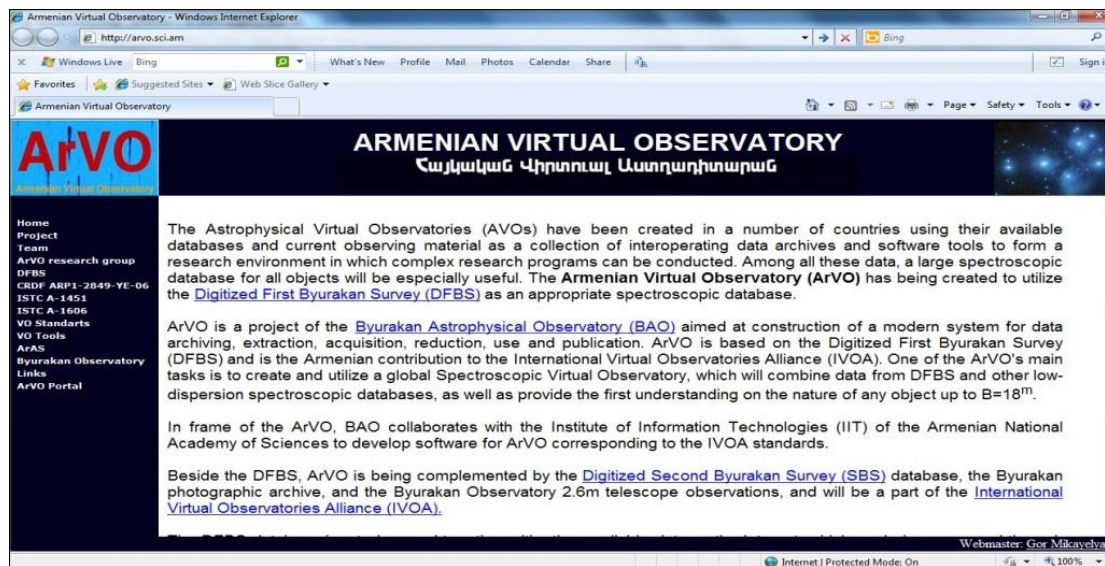

The core of the air pollution system is the Air Quality (Community Multiscale Air Quality, CMAQ) modeling system, which has been designed to approach air quality as a whole by including state-of-the-science capabilities for modeling multiple air quality issues, including tropospheric ozone, fine particles, toxics, acid deposition, and visibility degradation.

The first experiments have been done in the Hrazdan region of Armenia.

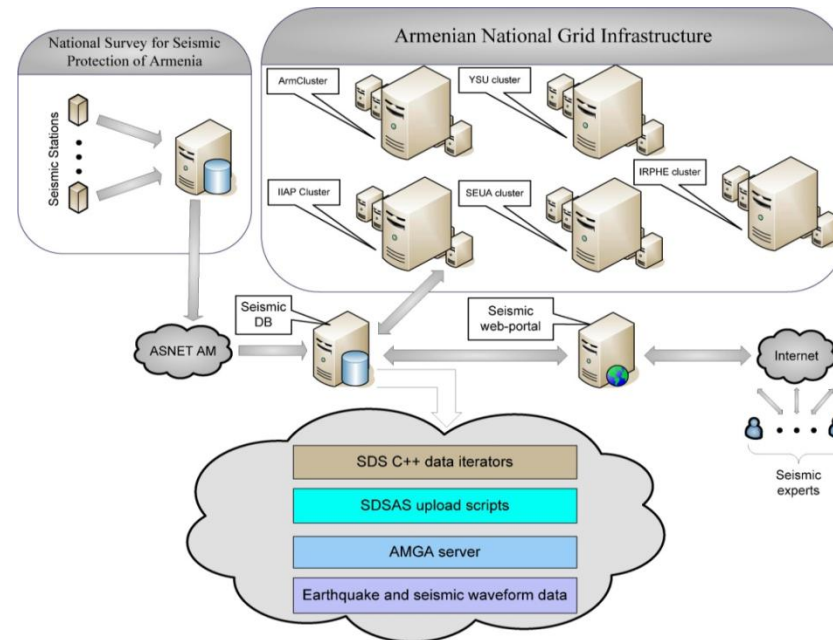

# Heavy User Communities: Astrophysics

At present the International Virtual Observatories Alliance unifies 17 national VO projects and serves for coordination of the homogeneity and interoperability of existing astronomical data (images, spectra, catalogs, literature, etc.). The Armenian VO project is being developed since 2005 and is a part of the International Virtual Observatory Alliance.

# Heavy User Communities: Seismology

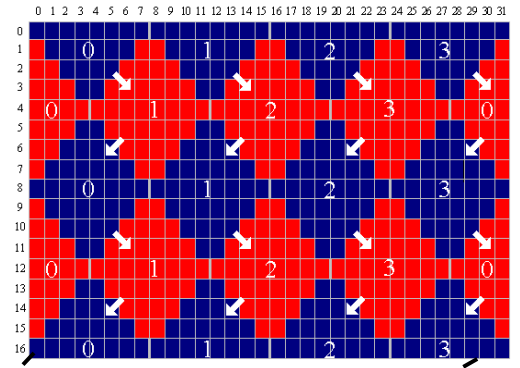

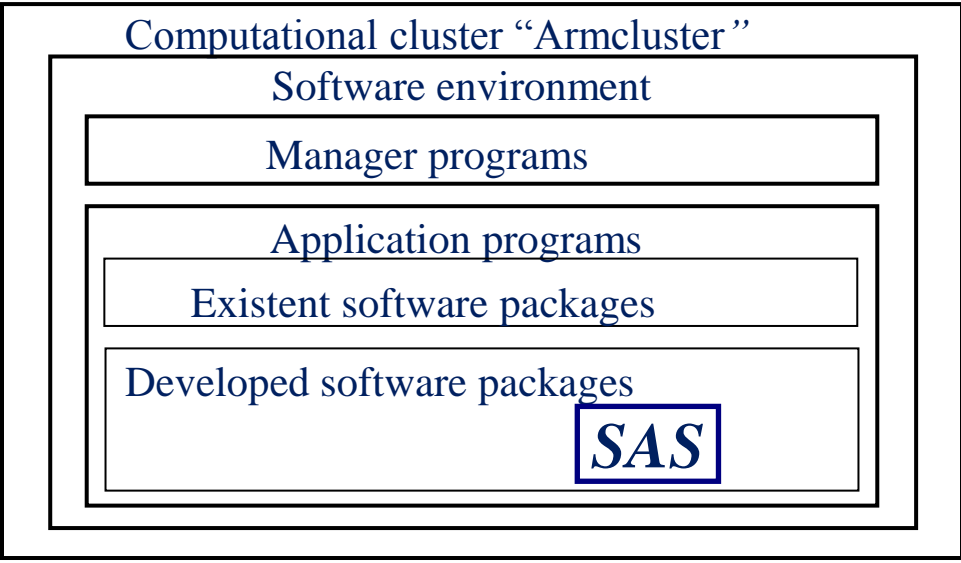

In Armenia the seismological data are collected from about thirty stations and stored at the servers of National Survey for Seismic Protection of Armenia. The seismology platform consists of the seismic data, AMGA Metadata Catalog, programming tools and applications (ELF, SRA, etc.) developed within the EU FP7 SEE GRID SCI Project.

# Heavy User Communities: Physics

- Grid infrastructure in the field of quantum information technologies and new nonlinear materials
- Coding of the full chain for the Monte Carlo production for physics analyses of HERMES experiment using
- Implementation of matrix pseudo-random generator and numerical solution of very complicated physics(ongoing)
- The calculation of NNLL QCD corrections for  $B \rightarrow X_s \gamma$  decay(ongoing)
- Extend of NNLL QCD corrections calculation methods using parallel computing and GRID technology
- Accelerator physics, beam dynamics special studies - Accelerators design
- Accelerator physics, beam dynamics special studies - FEL radiation simulations

# Heavy User Communities: Mathematics

**SAD** – description of one (two)-dimensional systolic array

**PM** – cluster based programming module

## Welcome to the Official web-site of the Armenian National Grid Initiative Foundation

The grid infrastructure is recognized today in Europe and worldwide, together with the highspeed networking, as one of the basic components of the e-Infrastructure of research and education and soon of the entire knowledge-based society. The starting point of such perception of the grid infrastructure is the paradigm of the grid itself, which offers a flexible organization of geographically distributed resources (computing, data and information resources as well as, for instance, laboratory and experimental devices and equipment), with a consistent and simple access option and possibility to co-ordinately share them within collaborating virtual teams and organizations.

The Armenian National Grid Initiative (ArmNGI) represents an effort to establish a sustainable grid infrastructure in Armenia. The establishment of ArmNGI foundation is in process. Main aims of the initiative are;

- create a national GRID development policy
- to build up the national grid infrastructure
- to expand the high performance computing resources with collaboration of academic and commercial participants
- to give the information to the national user community about high performance computing, grid infrastructure and international grid projects
- to improve national applications
- to take place the international grid projects actively

### ArmNGI Partners
