

# HL-LHC Analysis Mini-Workshop

---

Graeme and Liz

# A mini-introduction for a mini-workshop...

- HL-LHC [review mandate](#) now well known to us all
- Need for a final document by 1 October drives us to a *first version by 30 June*
  - We will have two parts: one from ROOT, one from Python Data Science
- We organised today's workshop to start to discuss the longer term goals between the experiments and the projects
  - Focus on what we understand by *agreed functionality and performance*
  - The timescale is HL-LHC - next 5+ years of development
  - [Live notes](#) should record important discussion points and questions to follow-up
    - Can organise further short meetings (HSF Analysis WG?) if needed
- Thanks in advance for all the presentations and the productive discussions we anticipate...
