

# **Analysis Task with the implementation of Hybrid Track Cuts for pp collisions at $\sqrt{s_{\text{NN}}} = 5.02 \text{ TeV}$**

**Tutor: Dr. Antonio Ortiz Velásquez**

**Luz Tiscareño (UPA)**

**Friday, April 16<sup>th</sup> 2021**

# Objective

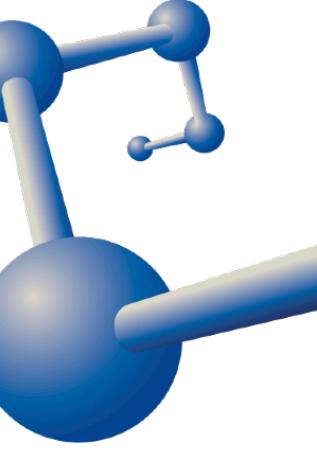

**Modify an Analysis Task (AliAnalysisTaskMcKno):** For  $pT$  leading and multiplicity in transverse region, replace the standard 2015 track cuts with the hybrid track cuts.

ALICE

# Weekly report

Instituto de  
Ciencias  
Nucleares  
UNAM

- Identify the histograms that are called in the unfolding program (response matrices, reconstructed true distributions, and so on).
- Analyze where these histograms fill in and the overall structure of the program.
- Visualize in which part of the program 50% of the statistics is selected.
- Search about the ITS and the SPD.
- Replace standard 2015 track cuts with hybrid track cuts.
- Plot the azimuthal distribution of  $\phi$ .

## AliAnalysisTaskMcKno.cxx

UPA

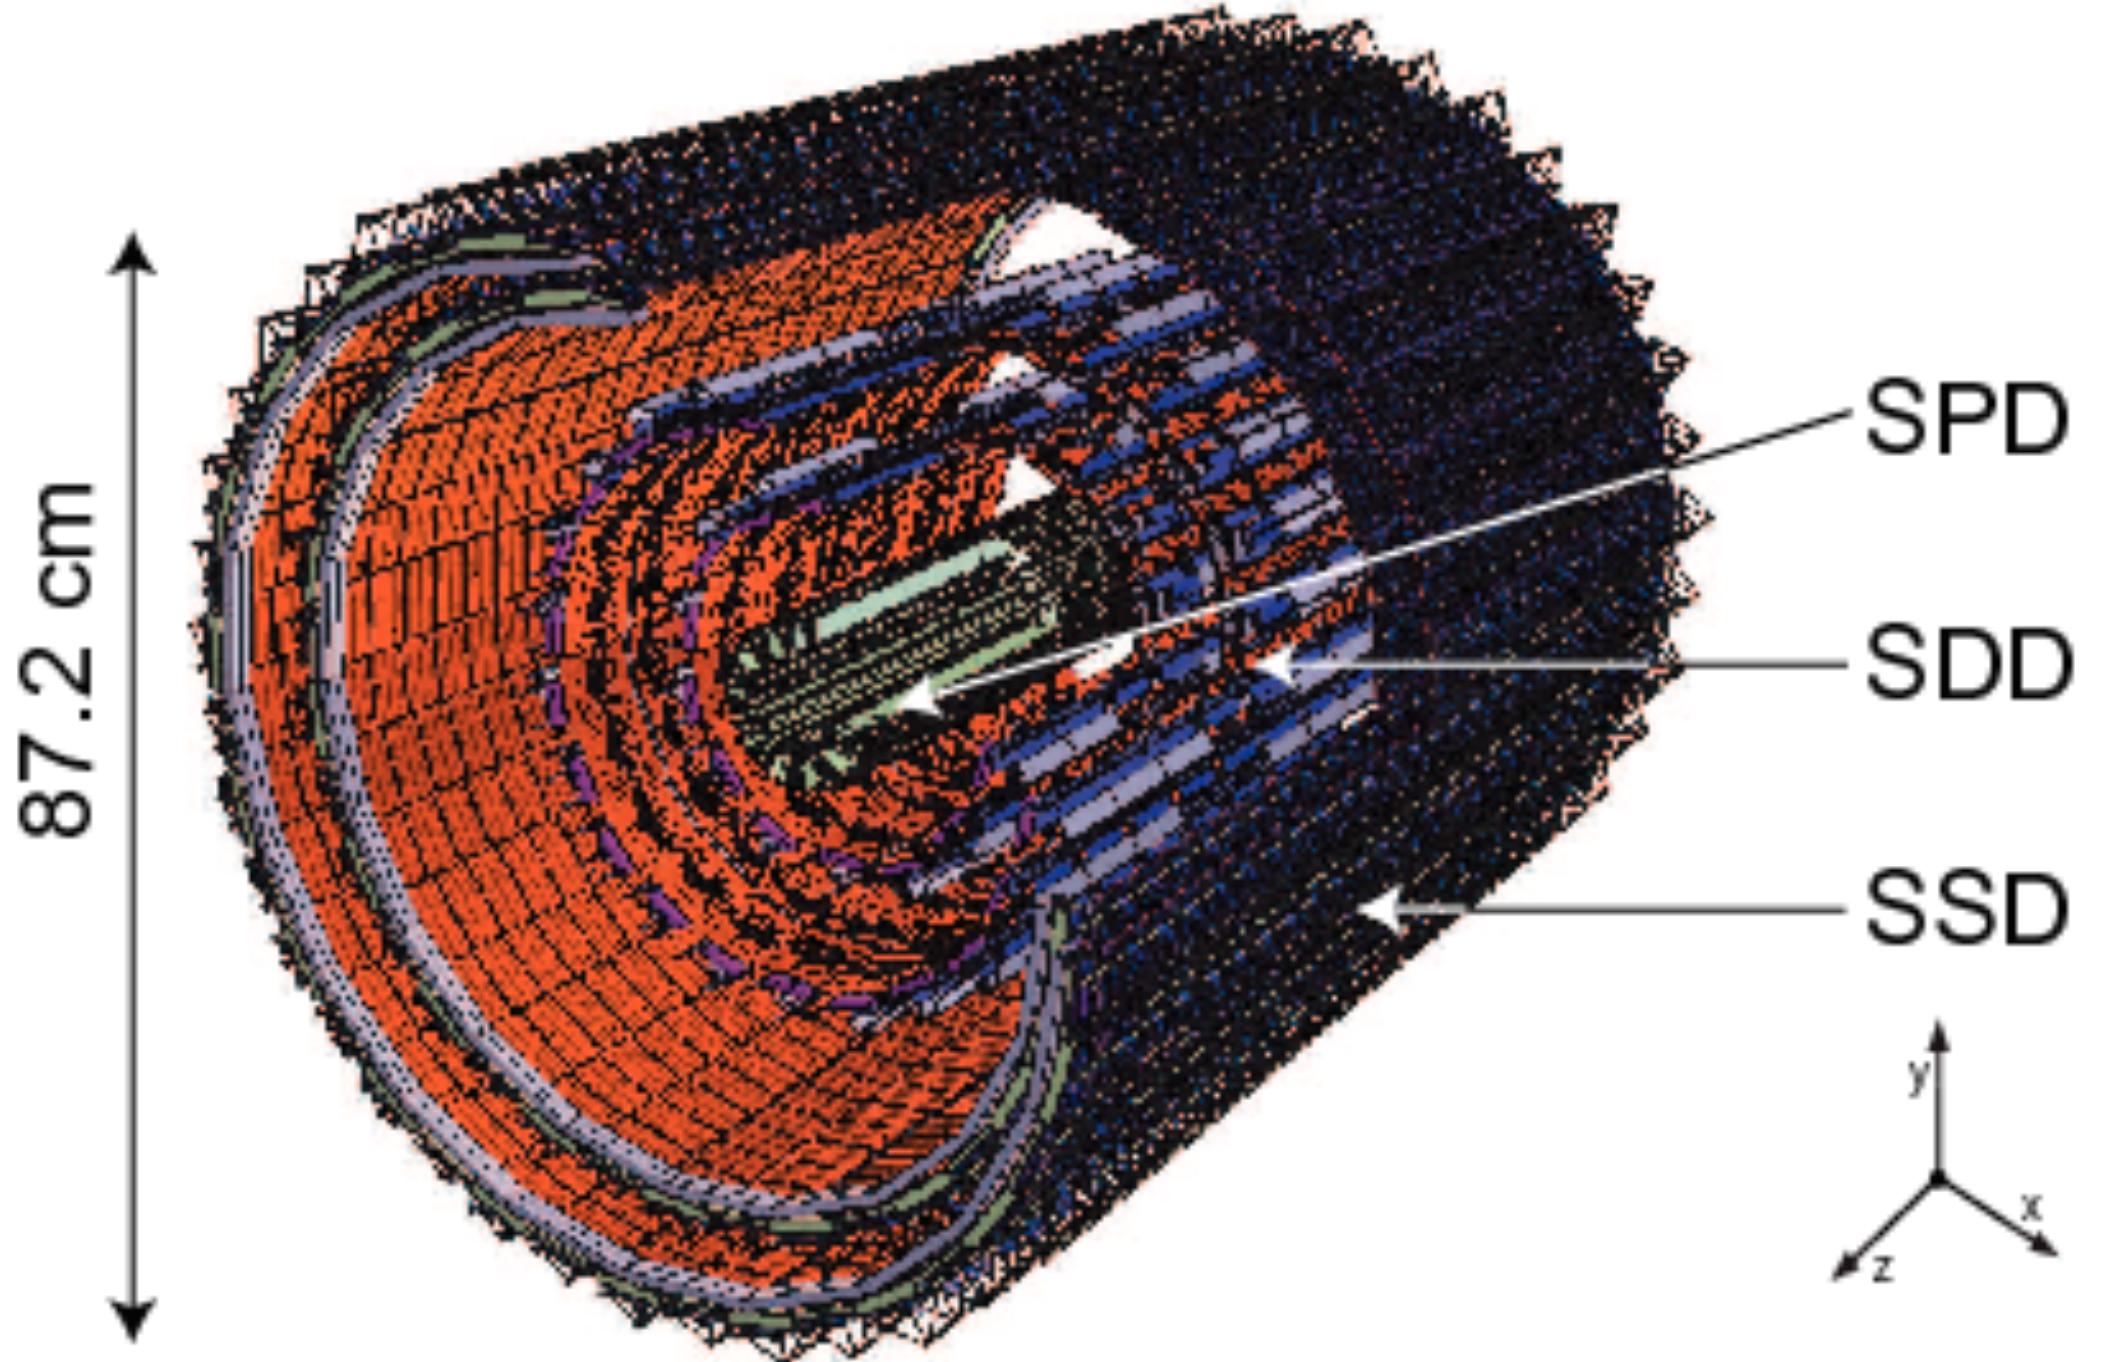

UNIVERSIDAD POLITÉCNICA  
DE AGUASCALIENTES

# Inner Tracking System (ITS)

## Basic functions:

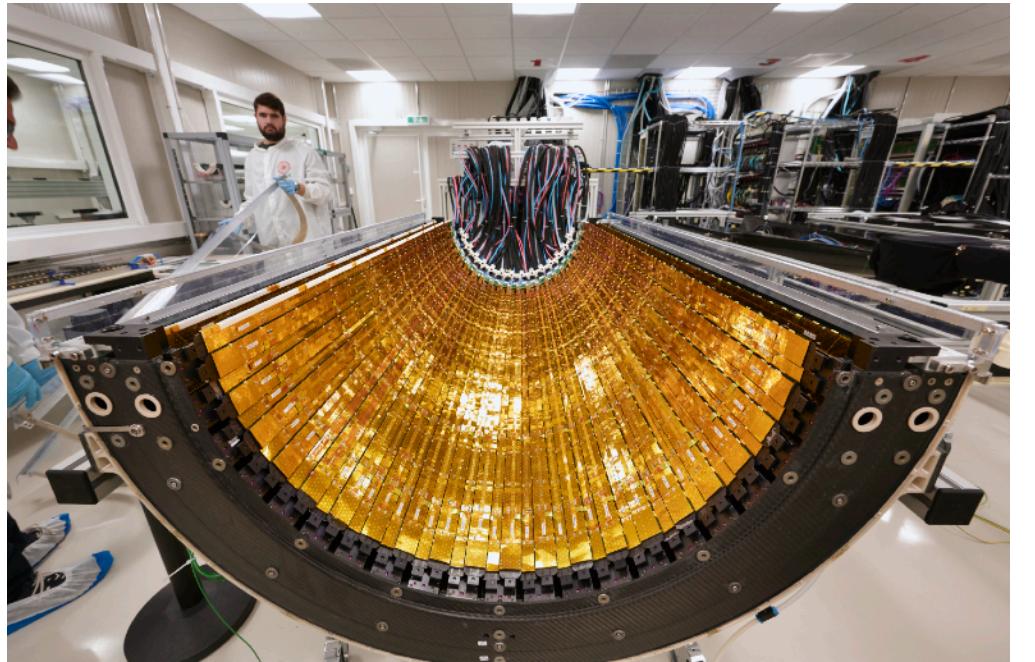

- Determination of the primary vertex (better than  $100 \mu m$ ).
- Reconstruction of the secondary vertex.
  - ♦ Necessary for the reconstruction of charm and hyperon decays.
- To identify and to track particles with low-momentum.

# ALICE ITS

## Inner Tracking System (ITS)

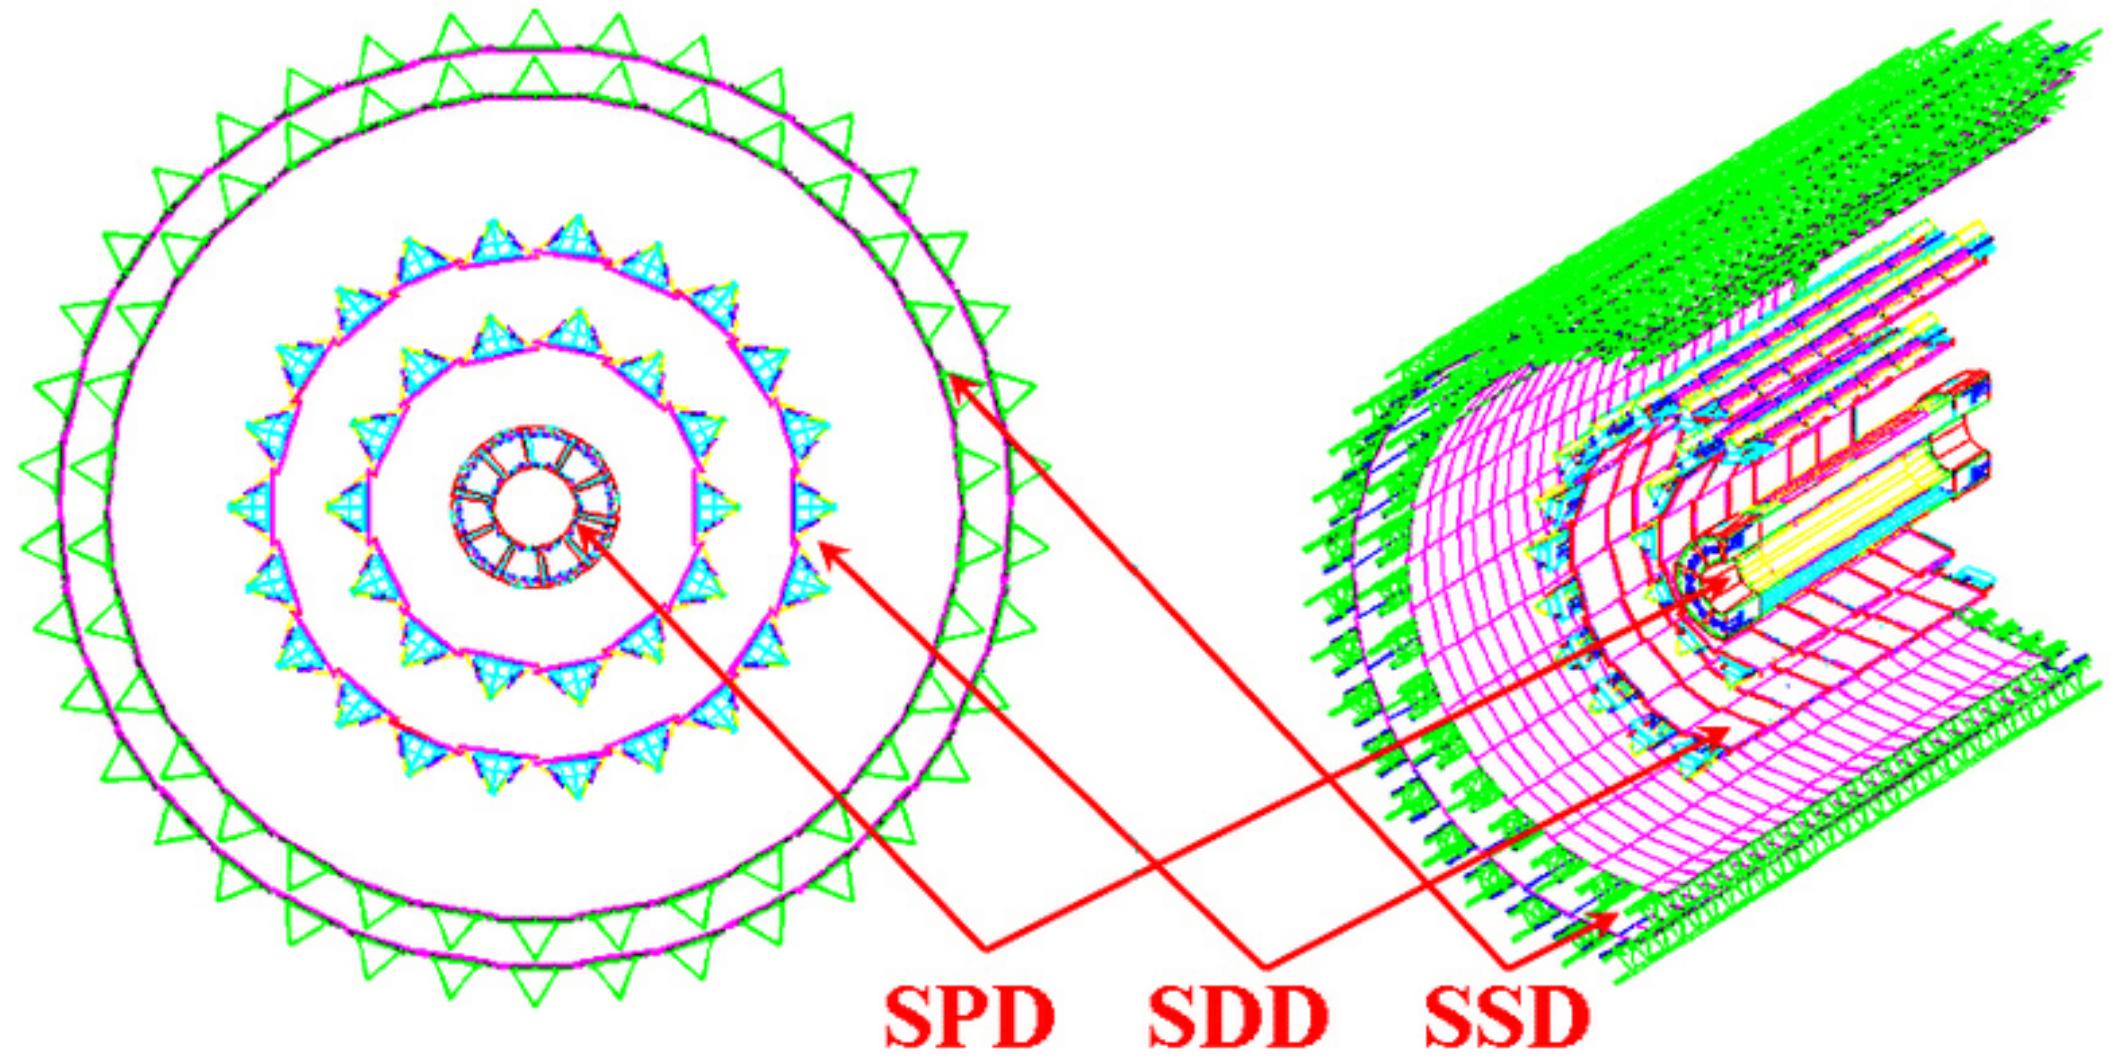

### Silicon Pixel Detectors (SPD)

### Silicon Drift Detectors (SDD)

### Silicon Strip Detectors (SSD)

\*The central most detector

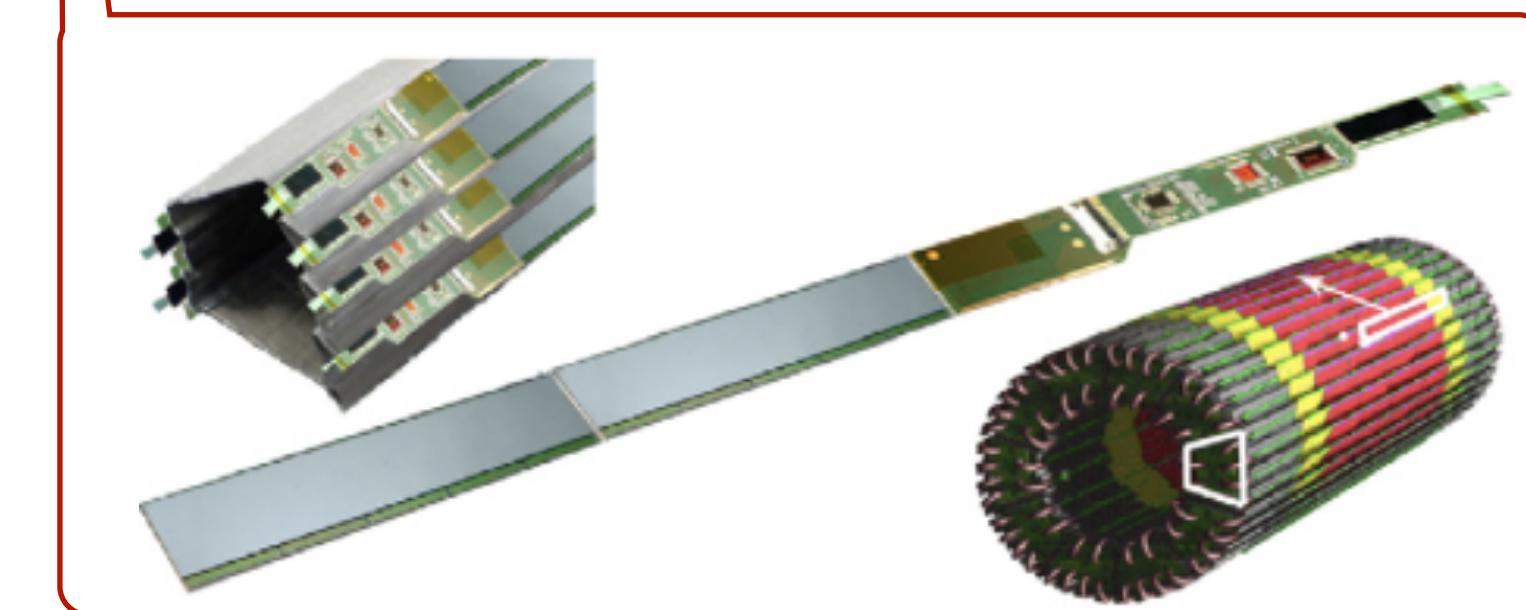

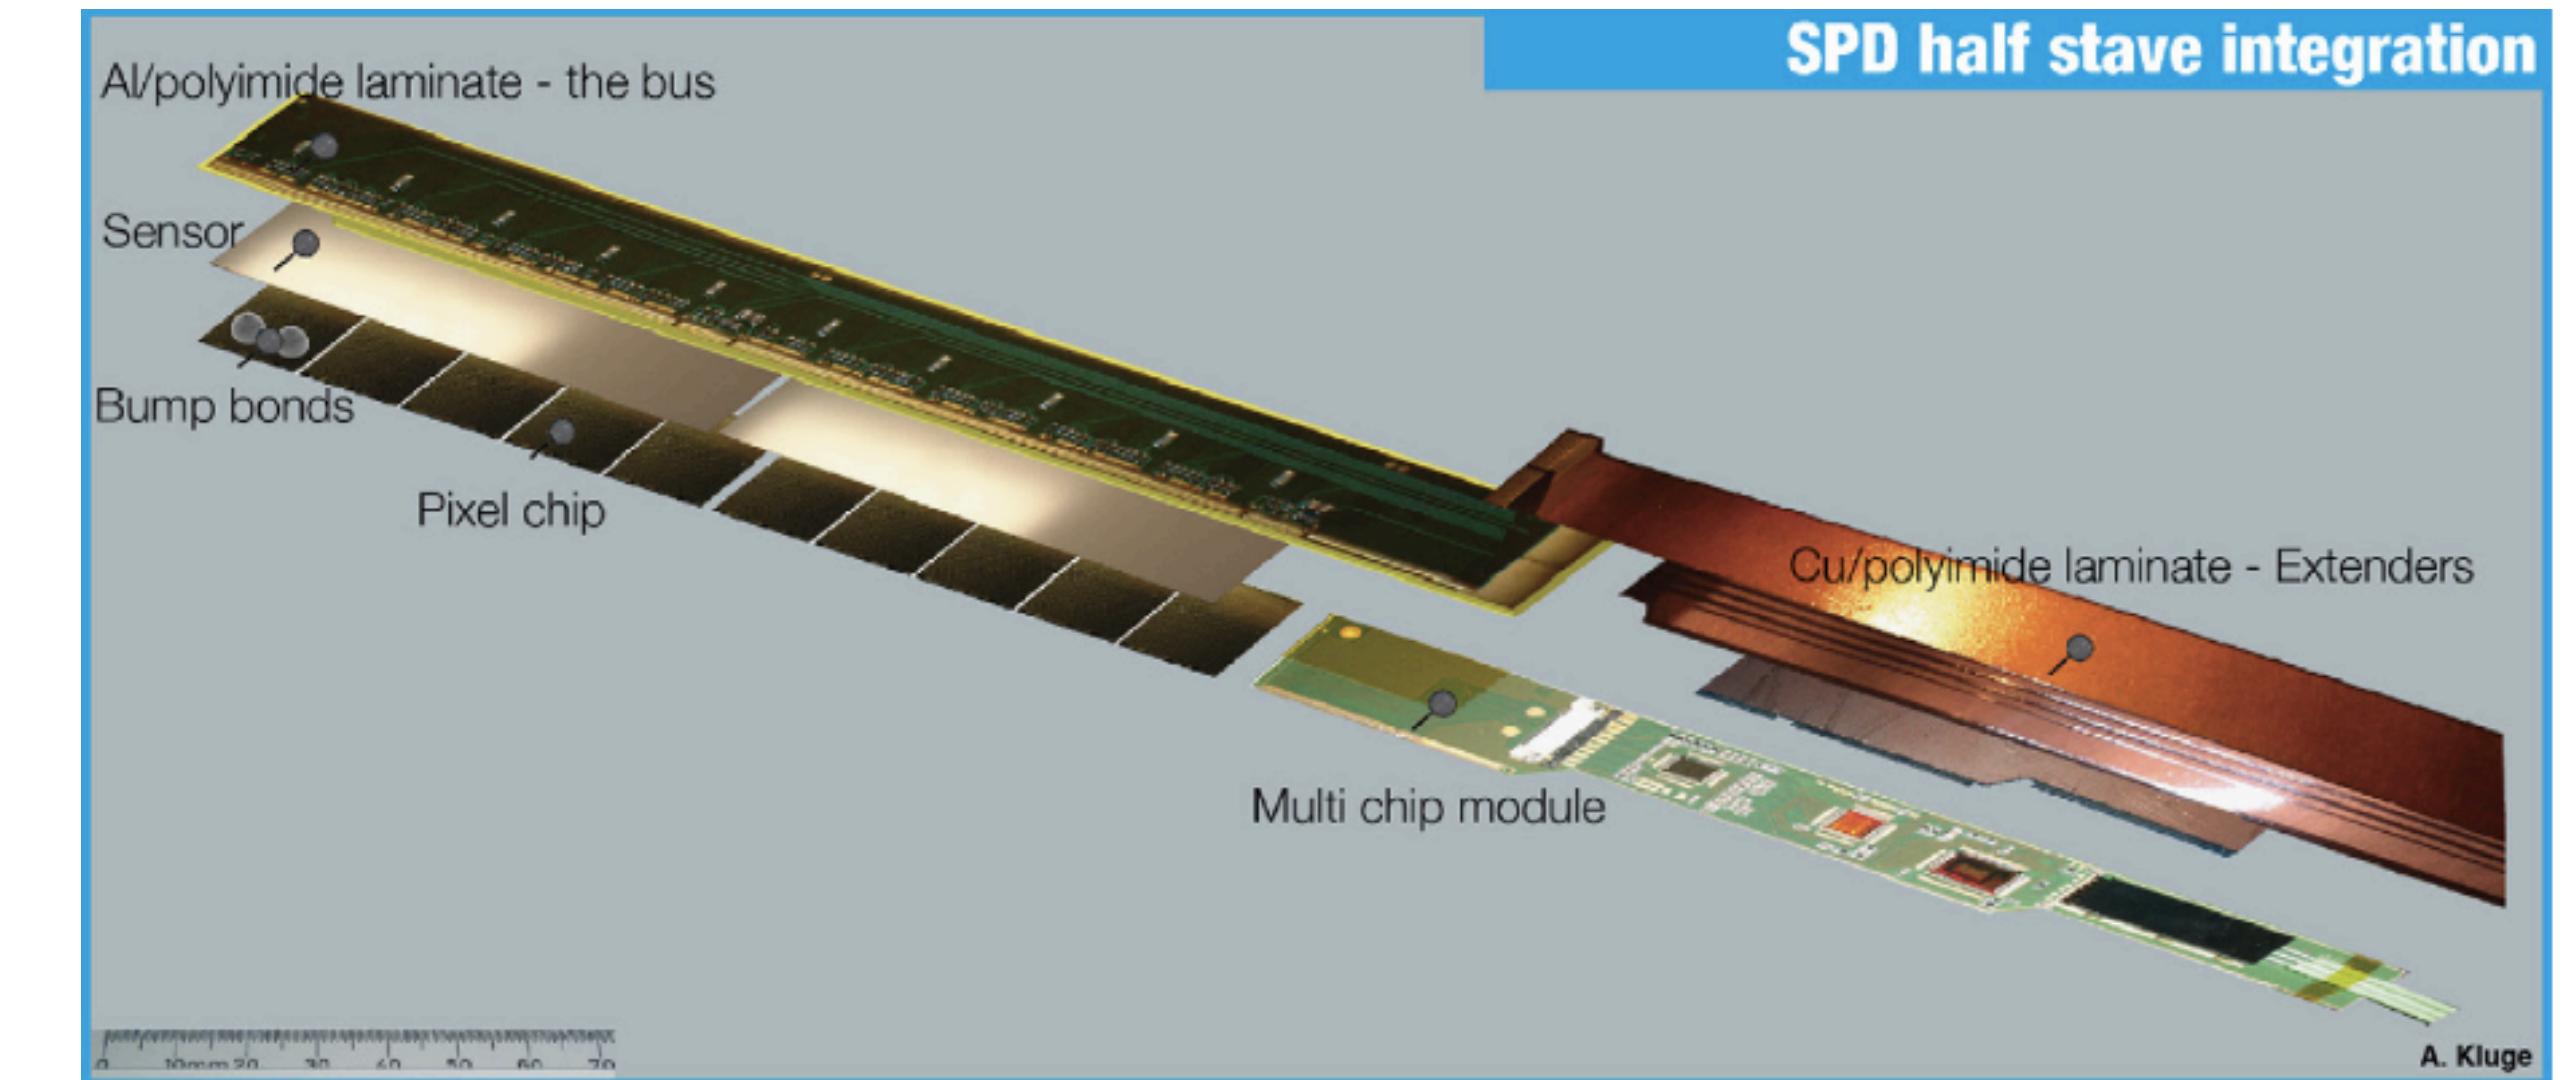

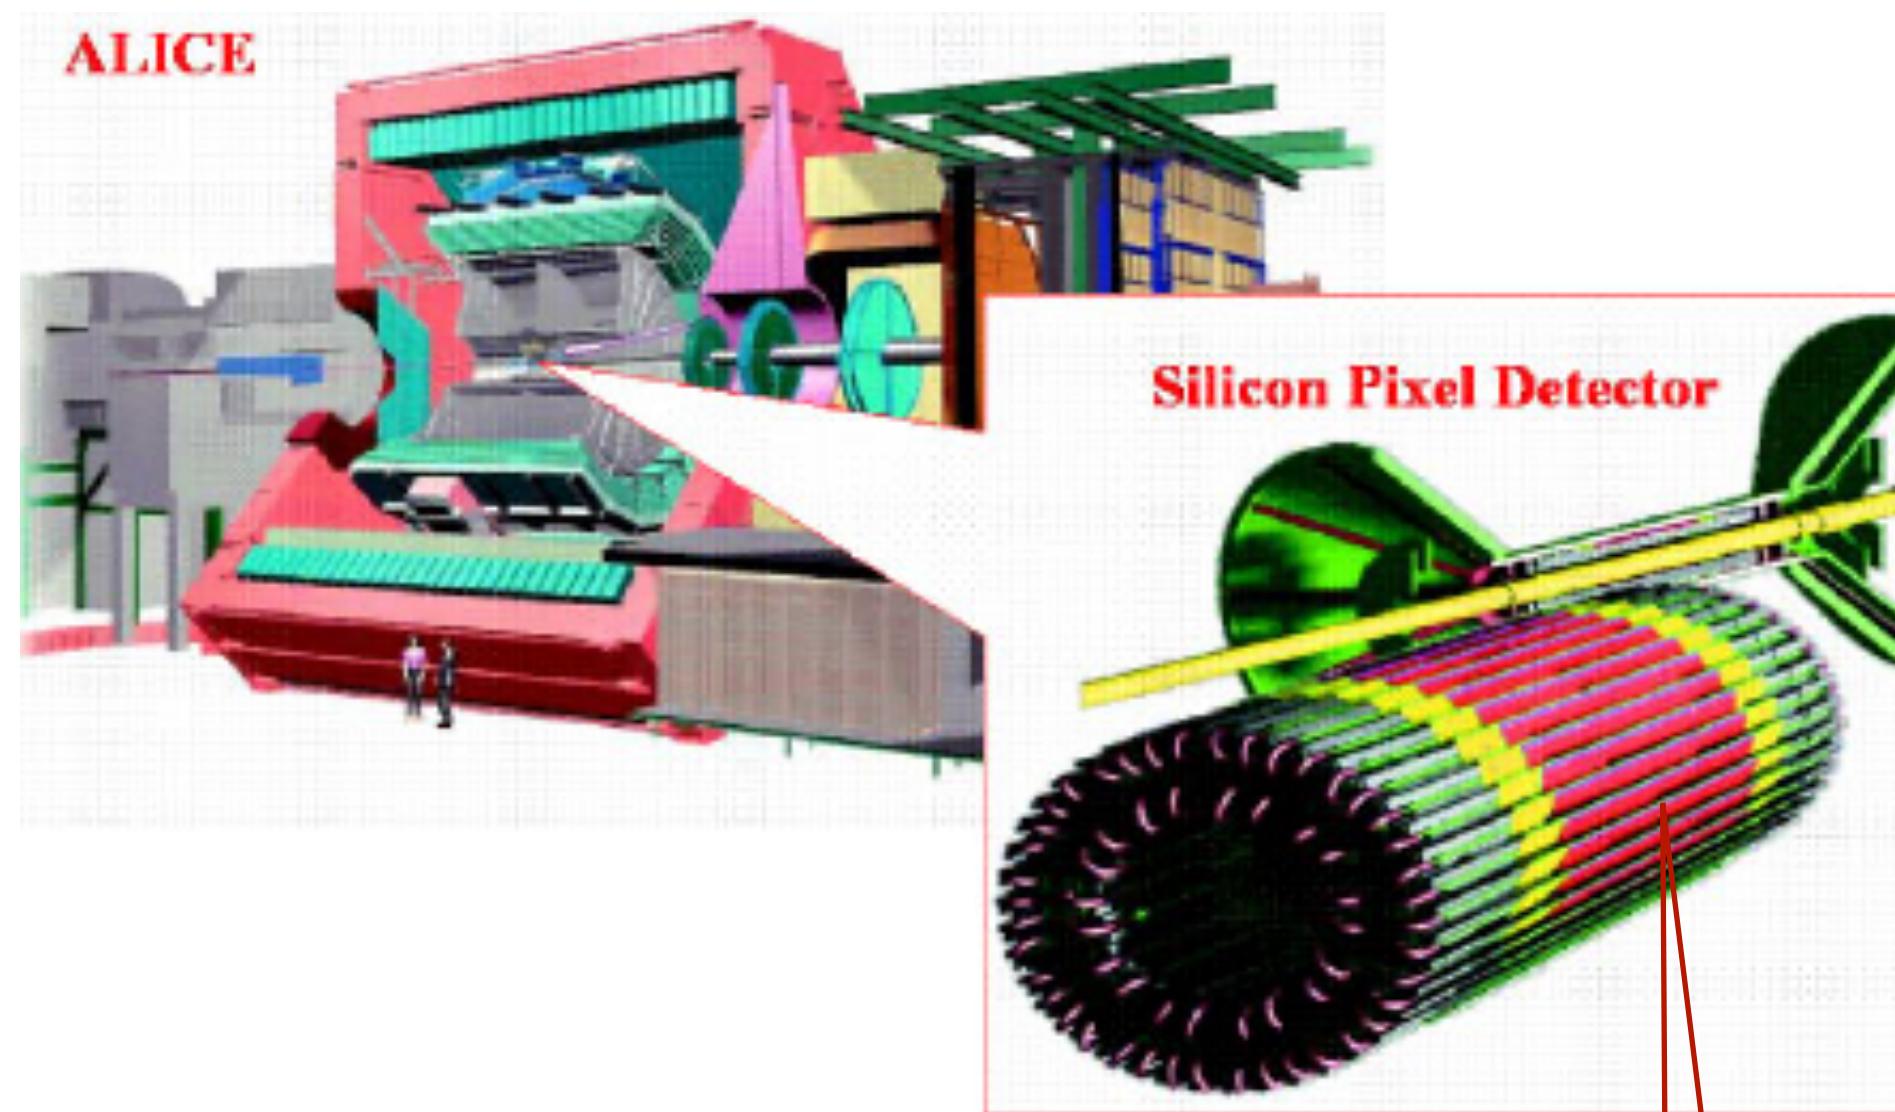

# Silicon Pixel Detector (SPD)

\*The SPD contains  $9.8 \times 10^6$  pixels on 1200 reading chips covering an area of  $0.2 \text{ m}^2$ .

## All on-detector components

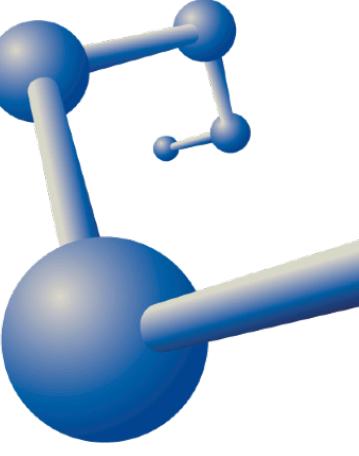

\*SPD is the most internal part of ITS

# Hybrid Track Cuts

The tracks need to be **rebuilt uniformly** with **good moment resolution**. To meet this uniformity requirement, ALICE contains two different classes of tracks called **hybrid tracks** that provide the desired properties when combined.

In a nutshell, hybrid tracks take **different sets of tracks** (for example, with or without the SPD) with the objective that the sum of all these contributions gives us something "flat".

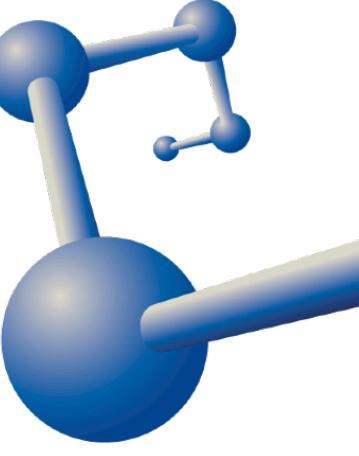

# Event Selection

Standard physics selection using the **kINT7 trigger**

- Track Selection (multiplicity in transverse region)  $|\eta| < 0.8, p_T > 0.5 \text{ GeV}/c, 5 < p_T^{\text{leading}} < 40 \text{ GeV}/c$

# Selection of associated pions, kaons, and protons

Cuts:

- $5 < p_T^{\text{leading}} < 40 \text{ GeV}/c$  ( $p_T > 0.5 \text{ GeV}/c$  for protons)
- $|\eta| < 0.8$
- $\text{DCA}_{xy} < 0.0105 + 0.0350 p_T^{-1.1}$
- $|n\sigma_{\text{TPC}}^i| < 4$  for either of  $i = \pi, K, p, e$
- Geometrical cut (for leading track):

|   |   |         |
|---|---|---------|
| 1 | SetCutGeoNcrNcl(3, 130, 1.5, 0.85, 0.7) | Default |
|---|---|---------|

Detectors used:

- ITS and TPC are used for track reconstruction

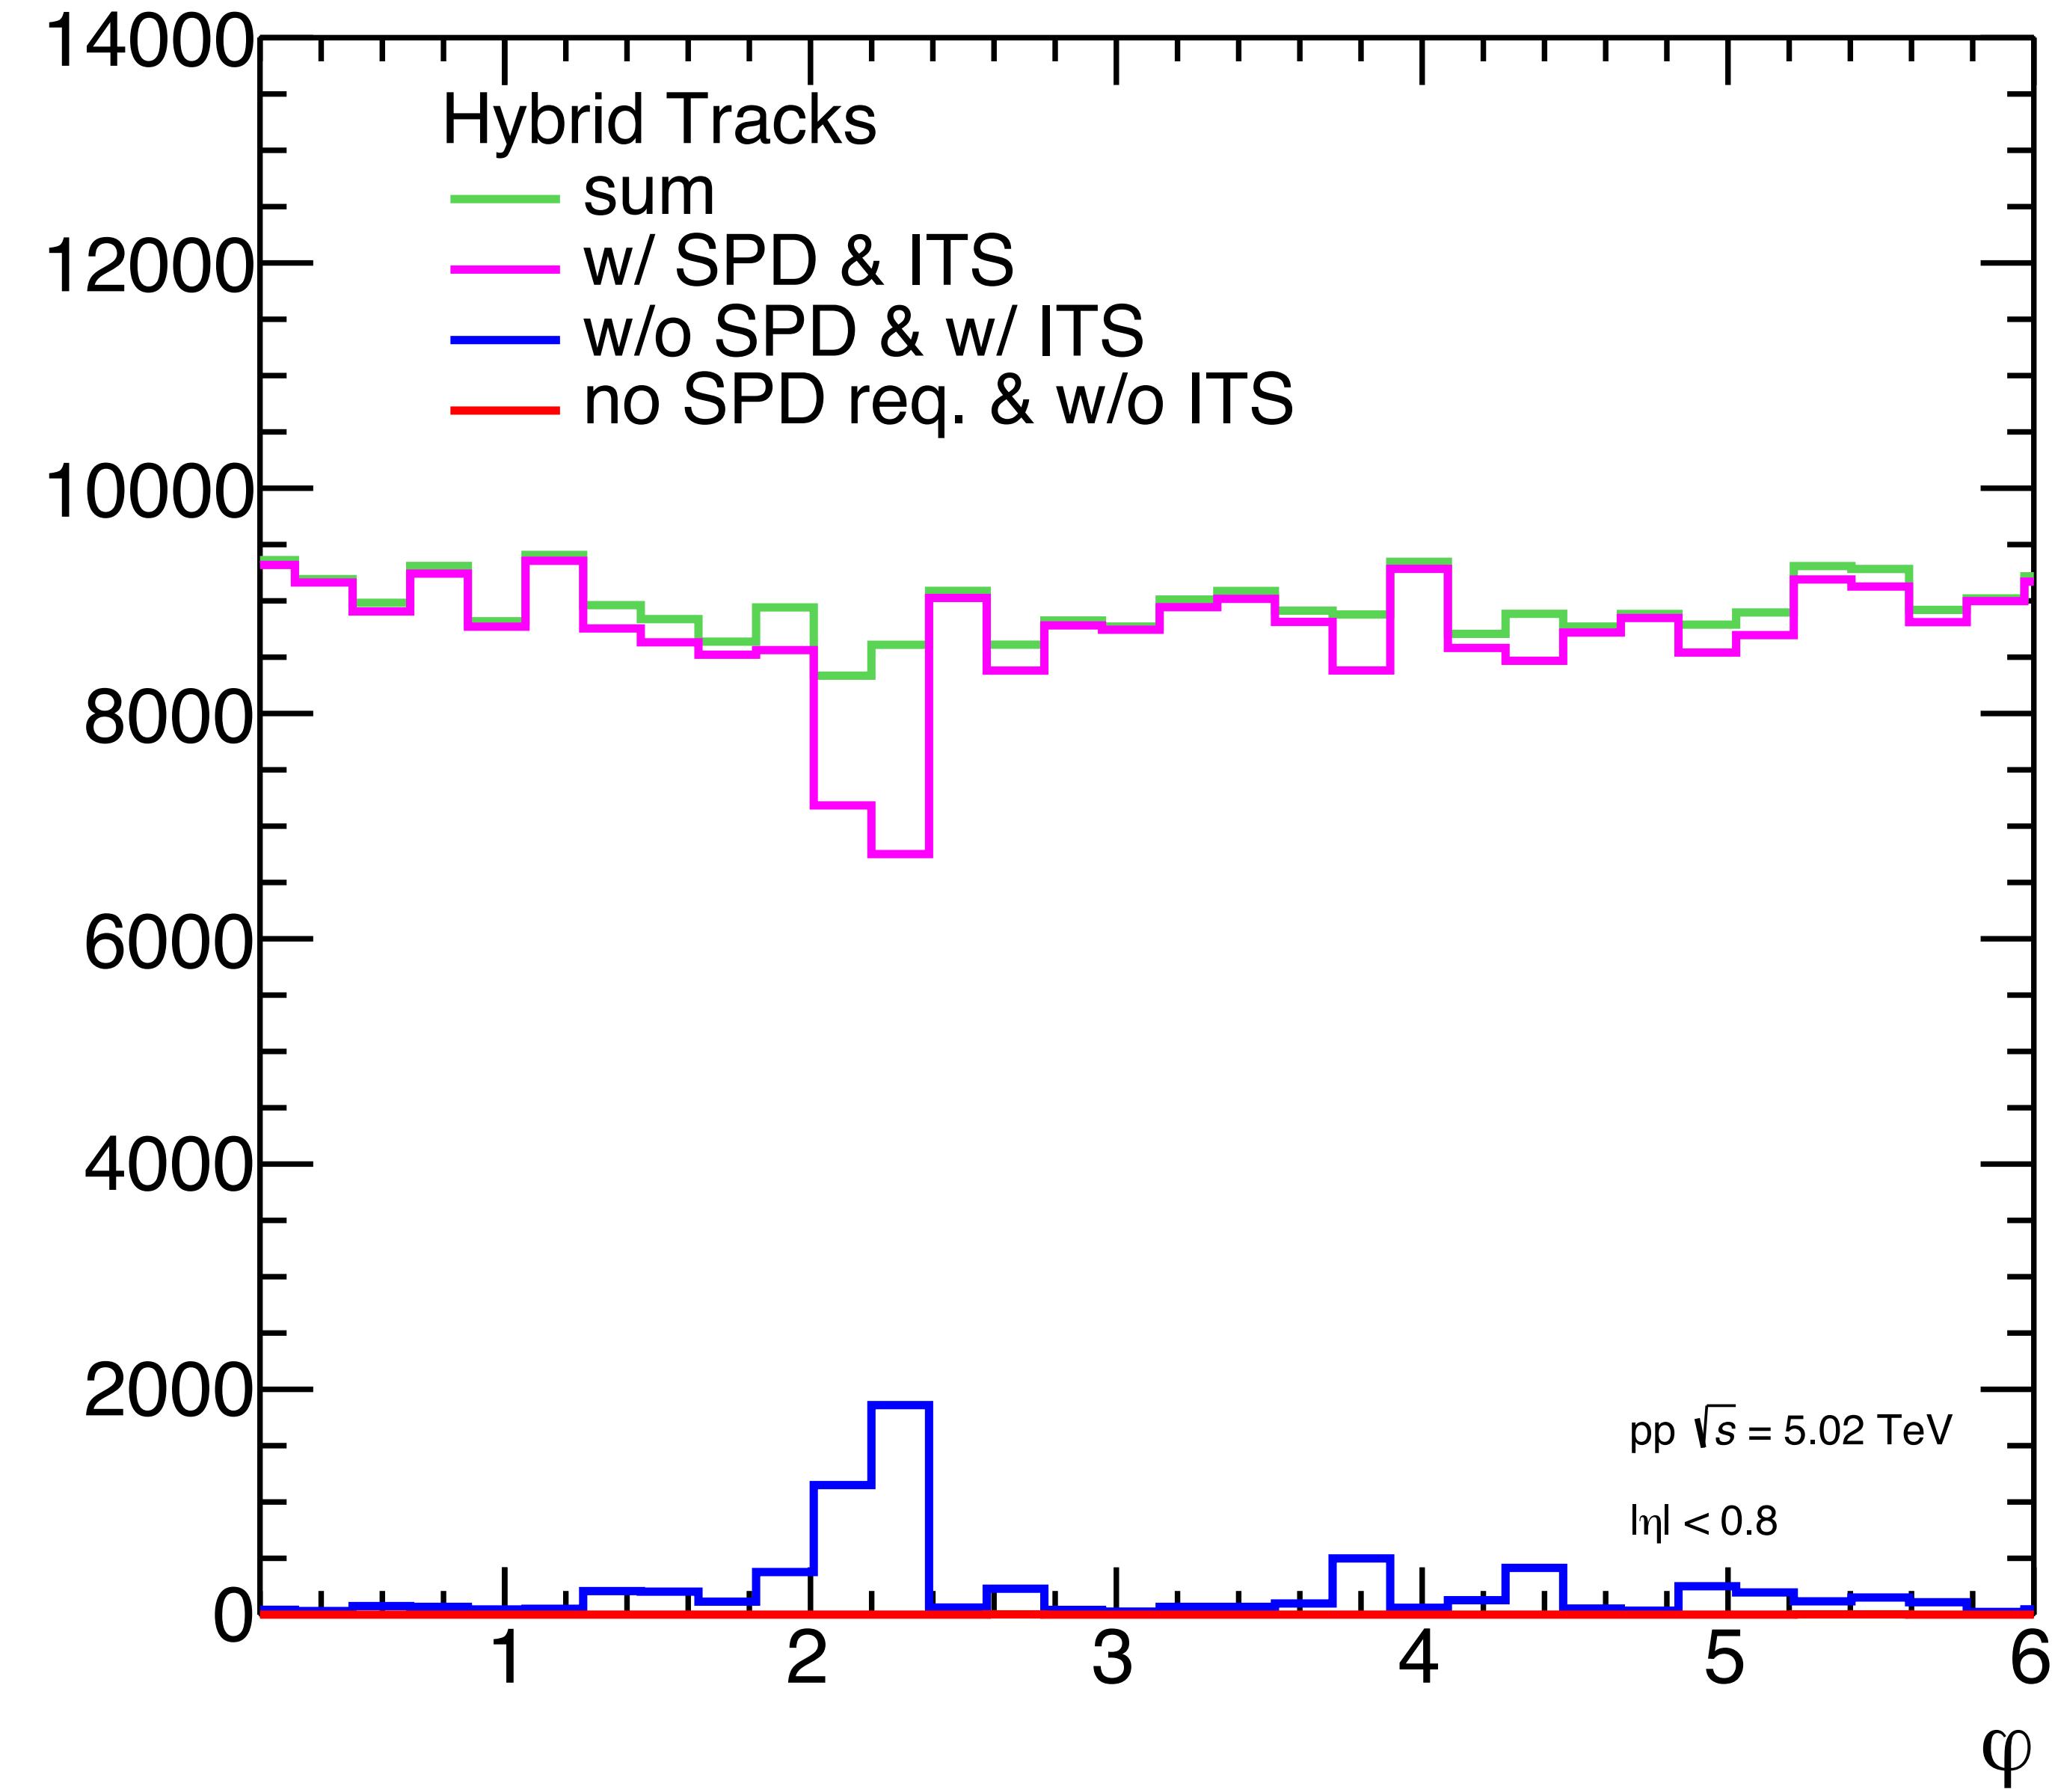

ALICE

- MC production cycle  
**LHC17e2** (62 AliESDs.root).

### Wagons:

- NchTSpTLeadAnalysis\_MC\_pp\_MCclosure\_HybridTrks
- NchTSpTLeadAnalysis\_MC\_pp\_MCclosure\_TPC

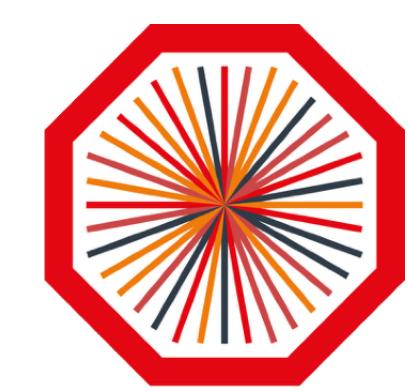

**UPA**

UNIVERSIDAD POLITÉCNICA  
DE AGUASCALIENTES

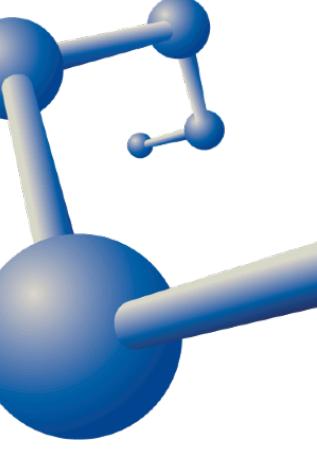

# To do

- Wait for the statistics (data - LHC16kl\_pass2 and LHC17e2).
- Compare the results of the two wagons to corroborate the analysis task.

ALICE
