Some work on Liquid Argon at Fermilab :

Thursday 9 June 2011 16:40 (20 minutes)

Liquid argon is an attractive target medium for both dark matter and neutrino detectors. The work done at Fermilab to understand and address the issues of producing and maintaining Argon with the purity needed for long electron drift-lifetime will be described.

W. Jaskierny, C. Kendziora, S.Pordes, R.L. Schmitt, E. Skup, T. Tope:
Fermilab

Author: PORDES, stephen (Fermilab)

Co-authors: KENDZIORA, C (Fermilab); SKUP, E. (Fermilab); SCHMITT, R. L. (Fermilab); TOPE, T. (Fermilab); JASKIERNY, W (Fermilab); TANG, Z. (Fermilab)

Presenter: PORDES, stephen (Fermilab)

Session Classification: Detector for Neutrinos

Track Classification: Detectors for neutrino physics
