The Argon Dark Matter experiment

Saturday 11 June 2011 16:30 (30 minutes)

The ArDM experiment is a double phase argon TPC/calorimeter soon to be operated at LSC (Laboratorio Subterraneo de Canfranc, Spain). It's aim is the direct detection of weakly interacting massive particles (WIMPs) by scintillation light and ionization charge.
In this talk we review the status of the project.
