Dear Helge, all,

this afternoon we will have a Tracker Electronics review, and I am not sure we will be done by 4 pm.

In case, I would like to write here the short statement for CMS, as you requested :

"CMS does not expect significant changes (== which can affect a benchmark) in the next few months, wrt what was presented earlier this year. So the workflow we have proposed is still a valid one, and is reasonably close to what we will run in production during Run3. Clearly, our software evolves continuously, and for sure if there is a later window of opportunity we will update to the state-of-the-art of that moment (most probably just release version, DB conditions and PU settings); but there is no phase-change expected."

ciao ciao

tom

Dear all,

a little later today or tomorrow, I will set up an Indico agenda for the meeting scheduled for this week. However, please note the following (those who attended the meeting last time will not be surprised):

- I invite experiment representatives to make a short statement in case there is significant progress on their workloads since the dedicated presentation, or in case there is better understanding of the time scales.

If helpful, you way wish to prepare a slide or two (but not more); slides are not compulsory.

- I invite site representatives to propose CPU server configurations we may wish to run "the basket" on. It should be systems exclusively reserved for benchmarking for the time we run benchmarks on them, and should be backed by some support capable of starting and following up the jobs (and act in case of issues).

I aim for a complete coverage of high-level views; we may wish to go into details in subsequent meetings.

Re: Meeting this Wednesday - please prepare

Again, if useful, you are free, but not obliged, to prepare a slide or two, but not more.

Those unable to join on Wednesday, please let me have the info (and the slide, if applicable) beforehand.

Cheers,

Helge
