1   Update to HEP-SCORE group *<2021-06-02 Wed>*

We received example CPU2017 instructions from Domenico and are working on running the containerised versions as per the instructions. The team member doing the work said "I am impressed" at how well things are working. QUESTION: are our results already being automatically uploaded to "the matrix"?

The intent now is consistency, that we can reproduce Domenico's results on our own machines. When that is reached, we will play a bit with compiler flags (looking forward to the talk this afternoon) to see if we can find a "max performance" configuration, as we discussed several months ago.

Given that we can run the containers at this point, we could also run other community workloads and contribute to "the matrix" at that point!
