Brief update on the LHCb benchmark

- Update from the LHCb simulation WG (thanks to Gloria Corti!)
    - New Gauss v55r1 will be released by the end of this week based on LCG_100
    - Should use that for the new LHCb benchmark container (CentOS7/gcc9 on x86_64)
    - Event type: inclusive b events (around ~50 events should be appropriate)

- Building the container by itself should then be relatively straightforward
    - I just need to find the time myself to do it – June is a very busy month
