BESIII Detector Simulation with Geant4

Friday 14 September 2007 14:40 (20 minutes)

The BESIII is a new detector which will take data in 2008 on the upgraded electron-positron collider (BEPCII) at 2-5 GeV. The development of the BESIII MC program based on Geant4 is outlined. The status and performance of the simulation are reported. Some problems and user requirements are mentioned.
