

# multivio

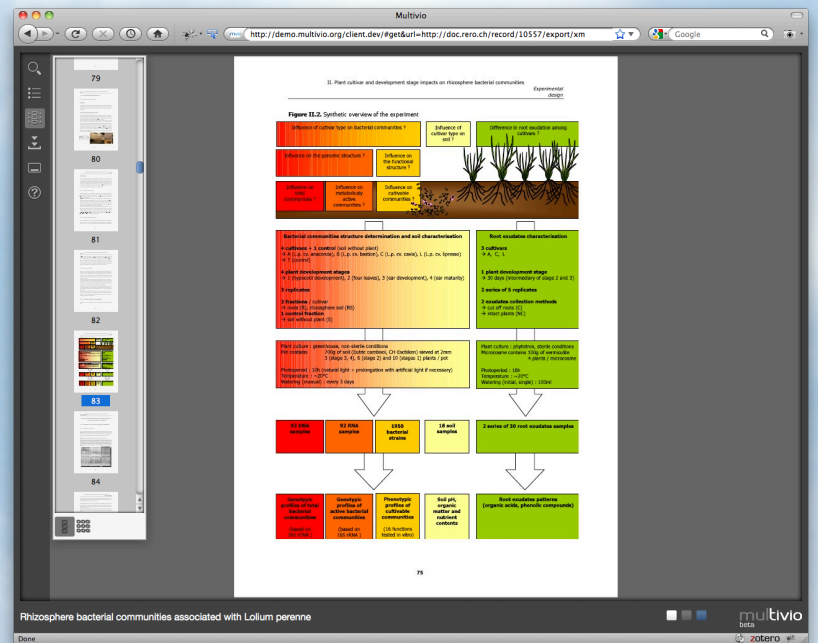

# open-source HTML5 document viewer

## highlights

- no browser plugin required (based on HTML + JavaScript + CSS)
- super-fast and lightweight web client (serves very large documents with limited bandwidth)
- easy integration into any institutional repository or digital library
- supports PDF, image, audio, video...

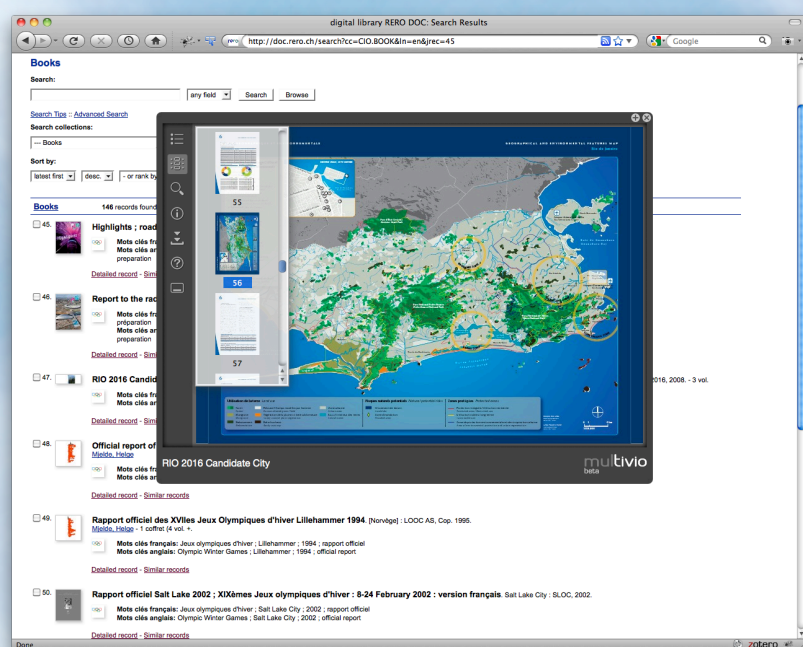

## features

- extensible and configurable
- fast, on-the-fly document preprocessing (no need to create and store presentation-ready versions of files)
- several metadata formats supported (DublinCore, MODS, MARC, METS...)
- authentication-based access to protected documents
- multi-file documents supported, with easy navigation

multivio is a digital document viewer in the form of a **web application**, that can be used as **add-on to institutional repositories and digital libraries**

it provides the user with direct and immediate access to digital content, inside the web browser

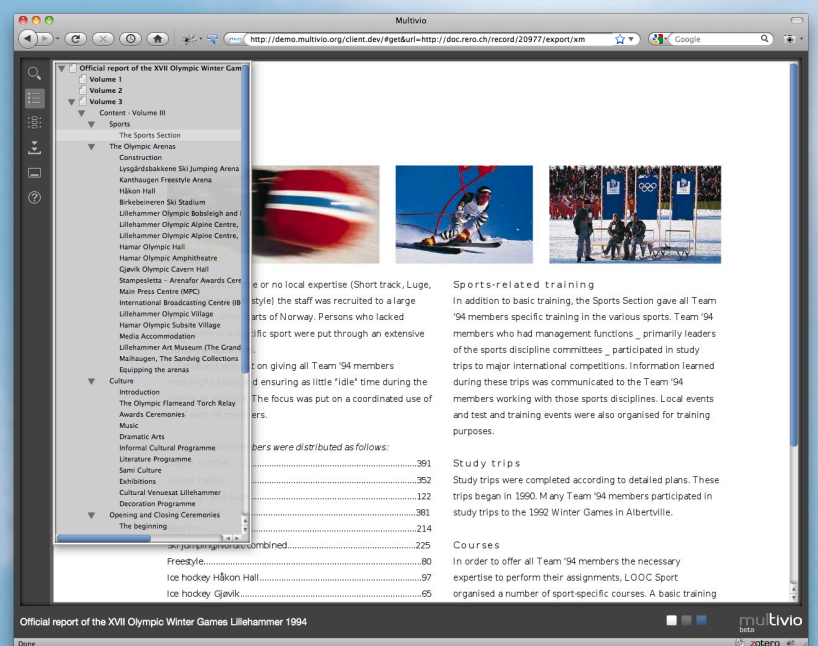

## multivio avoids the shortcomings of the "plain file download" approach

- avoids downloading the entire file
- handles multi-file documents gracefully
- avoids a redundant search operation (search query can be imported and applied by multivio at launch)

## functionalities

- structural navigation (toc)
- page thumbnails
- full-text search and text selection
- zoom, rotation
- overview window
- file download
