

Collider and GW complementarity in the 2HDM

Wednesday, 14 July 2021 15:30 (15 minutes)

We study electroweak phase transition and resultant GWs of a CP conserving 2HDM with a softly broken Z_2 symmetry. We analysed the parameter space of both type I and type II 2hdm without relying on any decoupling limit. We observe $M_{H^\pm} \approx M_H$ or $M_{H^\pm} \approx M_A$ favours SFOEWPT in 2HDM. In addition to di-Higgs production, scalar to fermion decay channel is also important to probe phase transition behaviour in 2HDM. We also comment about the shape of potential leading to SFOEWPT in 2hdm.

Are you are a member of the APS Division of Particles and Fields?

No
