# LabVIEW FPGA @ CERN 2021

- Unofficial
- For fun
- Share knowledge

# LabVIEW FPGA @ CERN 2021

# About the workshop

- 2 sessions
  - 14.06 at 16:00 2 hours
  - 17.06 at 16:00 2 hours

## Repeat

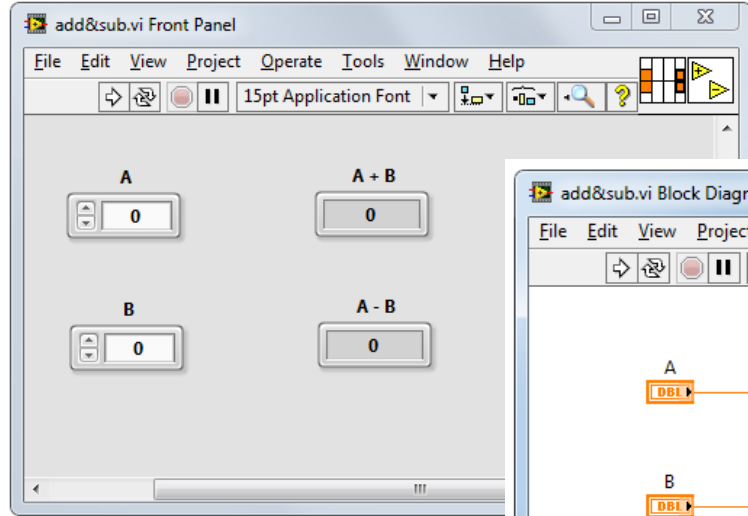

- 11.10 at 16:00 2 hours
- 14.10 at 16:00 2 hours

# About the workshops

- Minimize theory
- Maximize practice
- Some fun examples

# LabVIEW

- Intuitive
- Data driven
- Hardware integration

# National Instruments

Leader in data acquisition technology with innovative modular instruments and LabVIEW graphical programming software

- Corporate headquarters in Austin, TX
- Offices in nearly 50 countries
- 35,000+ companies served annually
- More than 1,000 products
- Approx. 7,100 employees
- 600 Alliance Partners

# Diversity of applications

SpaceX

Falcon rocket launch pad software

# LabVIEW on different hardware

# Projects based on NI @ CERN

- LHC collimators real-time control system

## Control system requirements

Axes positioning accuracy	few $\mu\text{m}$
Axes motion synchronization	below 1 ms
Response delay to a digital start trigger	100 $\mu\text{s}$
Position sensors RT survey frequency	100 Hz
Reliability	Very high

# • LHC collimators real-time control system

Layout

LHC PROJECT

120 systems

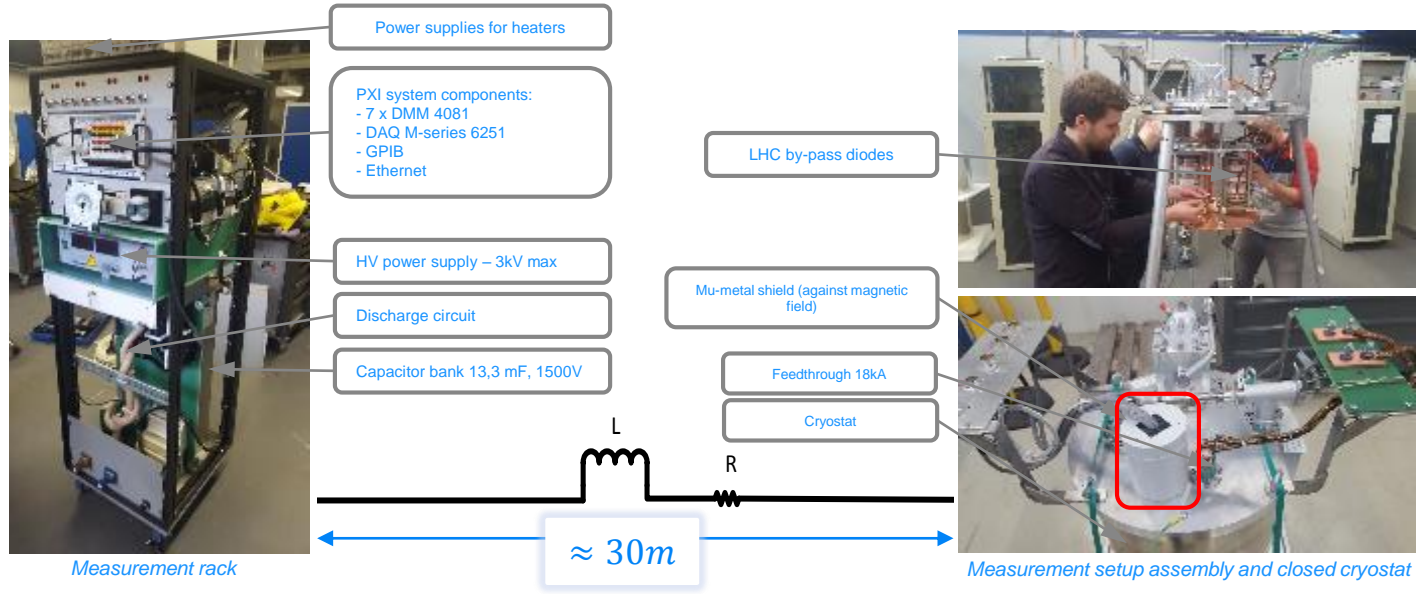

Architecture

# Projects based on NI @ CERN

- Measurement setup for characterization of the radiation hardness of cryogenic bypass diodes for the LHC-HL

# CERN LabVIEW support

- Website: [cern.ch/labview](http://cern.ch/labview)
- E-mail: [labview.support@cern.ch](mailto:labview.support@cern.ch)

# Getting the most out of this course

- Ask questions!
- Use the "raise hand" function in Zoom for direct questions
- Use the chat for indirect questions
- Experiment with hands-on exercises to understand the methods used
- Explore – there are always several solutions possible

# Why LabVIEW?

- Same concepts as in traditional languages (data types, loops, event handling, recursion and OOP)
- **Data flow** (execution is data-driven, not determined by sequential lines of text)
- **Intuitive**
- **Easy to debug**
- **Automatic parallelism**
- **Combines with other languages**
- **Hardware integration**

---

## **B. Project Explorer**

Project Explorer Window

Files Types

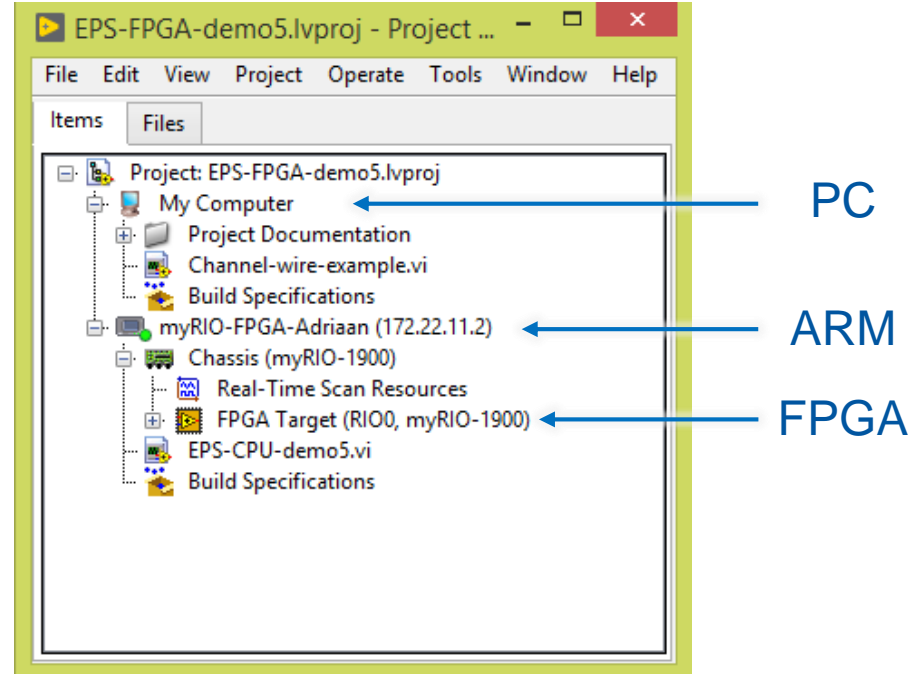

Project Folders

# Project Explorer

- See the hierarchy
- Organise project files
- Deploy files to targets
- Manage code for build options
  - Executables, installers, and zip files
- Integrate with source code control providers

# Project Explorer

# LabVIEW Files

- Common LabVIEW file extensions:

LabVIEW project — .lvproj

Virtual instrument (VI) — .vi

Custom control — .ctl

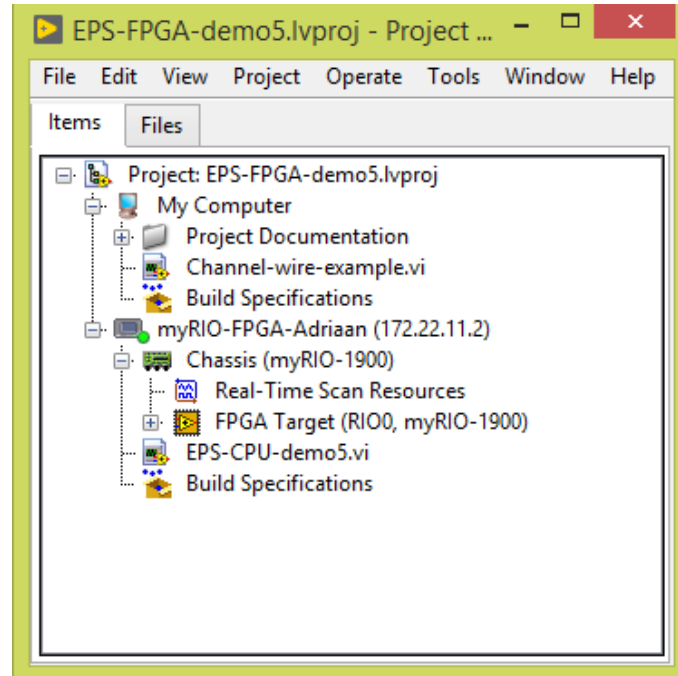

# Adding Folders to a Project

- Virtual folder
  - Organizes project items and does not represent files on disk

- Auto-populating folder
  - Adds a directory on disk to the project
  - LabVIEW continuously monitors and updates the folder according to changes made in the project and on disk

## C. Parts of a VI

Front Panel

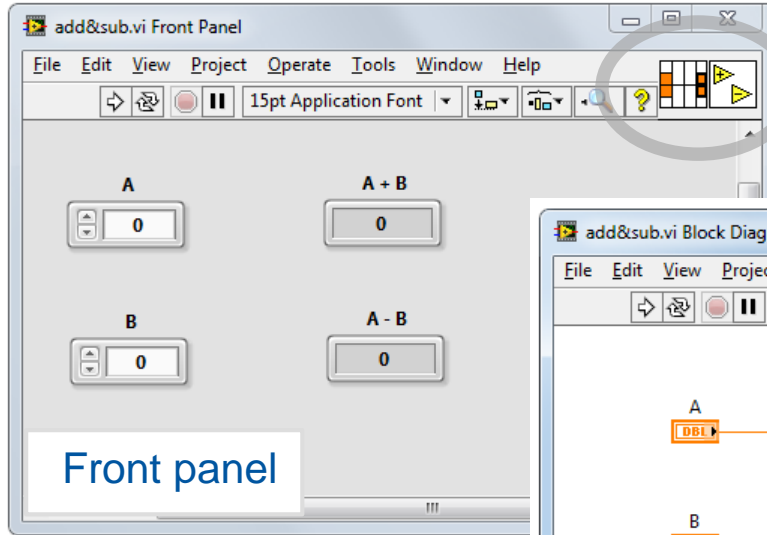

Block Diagram

Icon

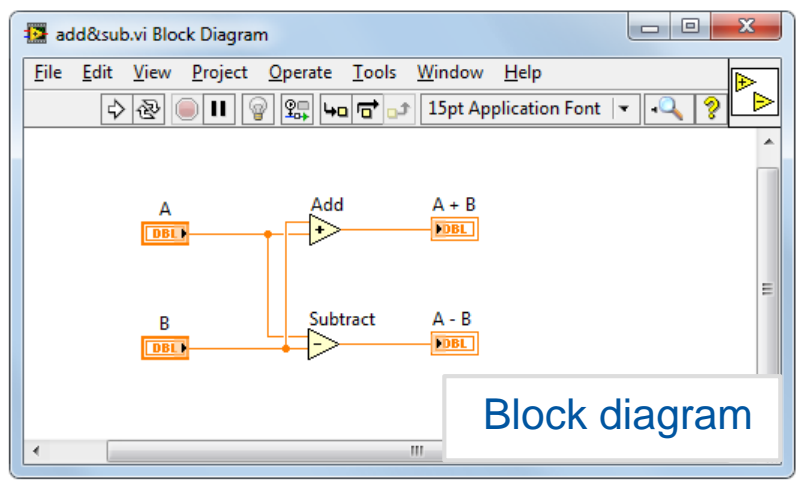

Connector Pane

# Parts of a VI

VIs have 3 main components:

Icon/Connector pane

Block diagram

# Parts of a VI – Front Panel

Front Panel – User interface for the VI

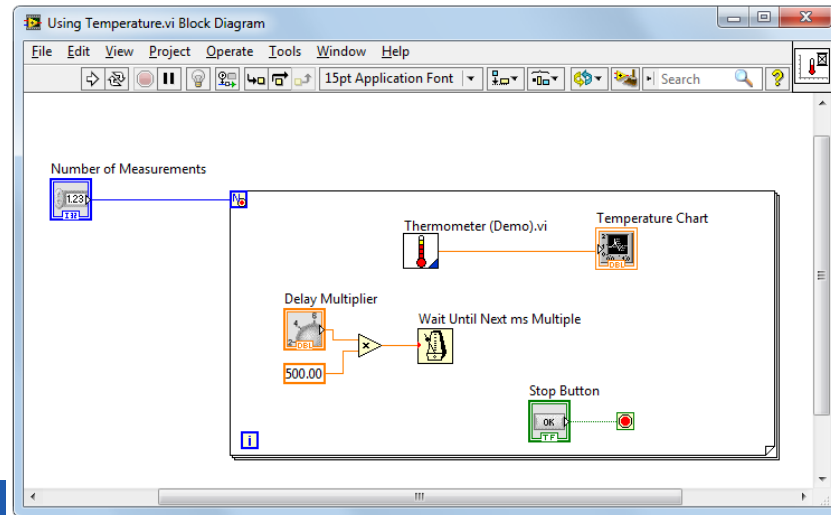

You build the front panel with controls (inputs) and indicators (outputs).

# Parts of a VI – Block Diagram

Block Diagram – Contains the graphical source code

Front panel objects appear as terminals on the block diagram.

# Parts of a VI – Icon/Connector Pane

**Icon** – Graphical representation of a VI

**Connector Pane** – Map of the inputs and outputs of a VI

Icons and connector panes are necessary to use a VI as a subVI.

- A subVI is a VI that appears on the block diagram of another VI.
- A subVI is similar to a subroutine or function in a text-based programming language.

# D. Front Panel

Controls and Indicators

Object Styles

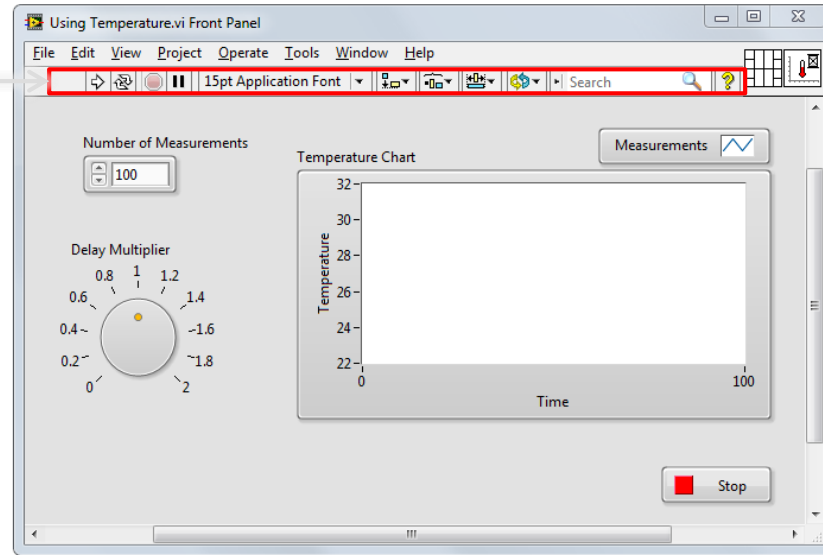

Object Types

Boolean

Numeric

String

# Front Panel

# Controls and Indicators

## Controls

- Input devices
- Knobs, buttons, slides
- Supply data to the block diagram

## Indicators

- Output devices
- Graphs, LEDs
- Display data the block diagram acquires or generates

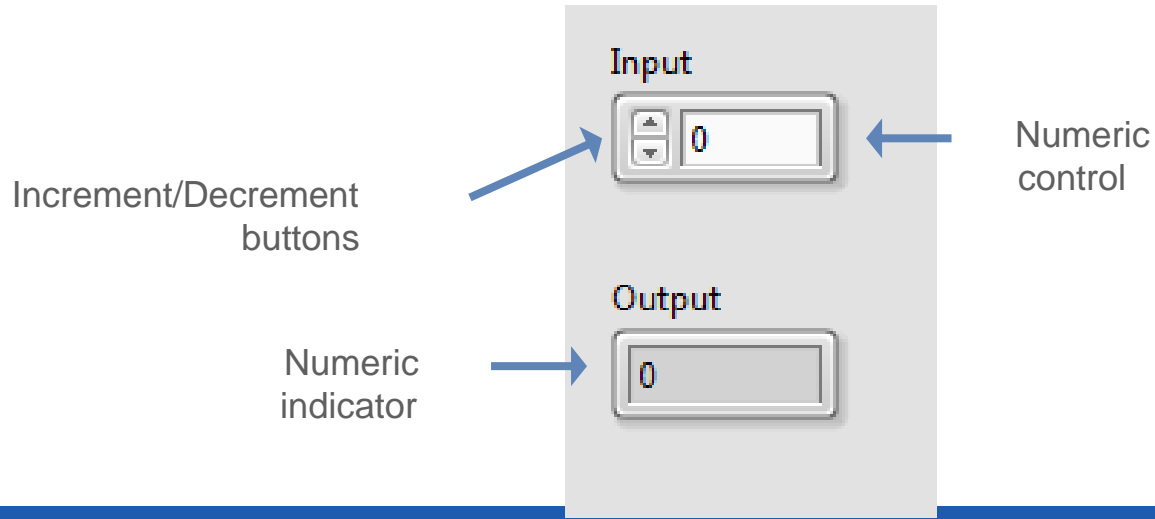

# Front Panel Object Styles

# Numeric Controls and Indicators

The numeric data in a control or indicator can represent numbers of various types, such as integer or floating-point.

# Boolean Controls and Indicators

- The Boolean data type represents data that has only two options, such as True/False or On/Off.
- Use Boolean controls and indicators to enter and display Boolean (TRUE/FALSE) values.
- Boolean objects simulate switches, push buttons and LEDs.

# Strings

- The string data type is a sequence of ASCII characters.
- Use string controls to receive text from the user.
- Use string indicators to display text to the user.

The screenshot displays three distinct UI components on a light gray background:

- String Control:** A rectangular box with a thin border containing the text "Receive text from user here." This is used for receiving user input.
- String Indicator:** A rectangular box with a thin border containing the text "Display text to the user here. Add a scrollbar if necessary." To the right of the text is a small vertical scrollbar icon, indicating that the text can be scrolled.
- Table:** A table with a grid structure. The first row contains two columns labeled "Heading 1" and "Heading 2". The subsequent rows contain data: (1, A), (2, B), (3, C), (4, D), (5, E), and (6, F). The table includes a vertical scrollbar on the right side and a horizontal scrollbar at the bottom.

# E. Block Diagram

Terminals

Nodes

Wires

Help

# Block Diagram

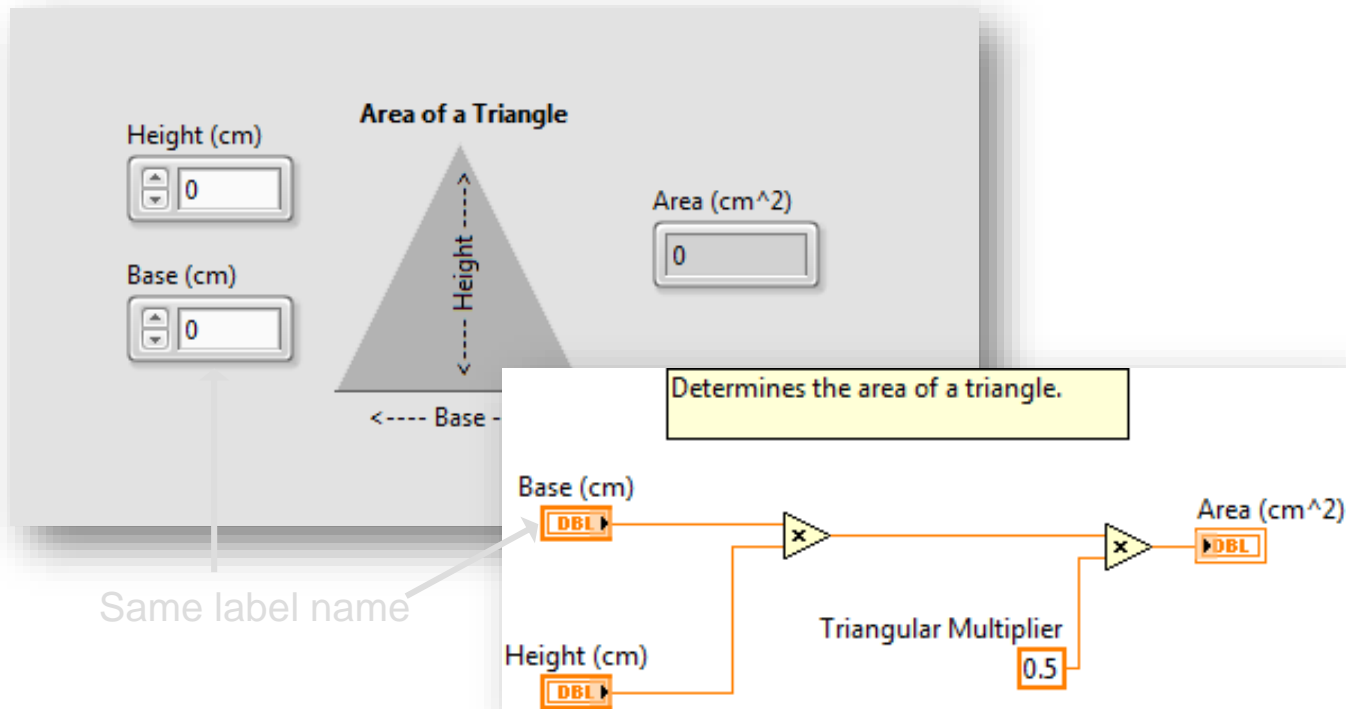

# Block Diagram

- Block diagram items:
  - Terminals
  - Constants
  - Nodes
  - Functions
  - SubVIs
  - Structures
  - Wires
  - Free labels

# Terminals

# Terminals for Front Panel Objects

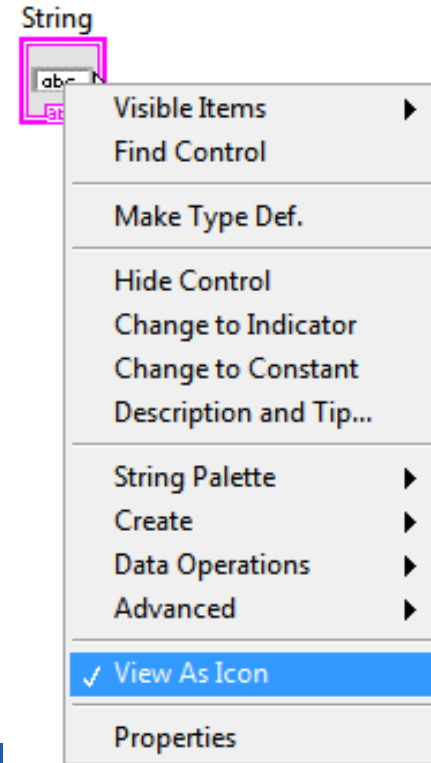

- Terminals are:
  - Entry and exit ports that exchange information between the front panel and block diagram.
  - Analogous to parameters in text-based programming languages.
- Double-click a terminal to locate the corresponding front panel object.

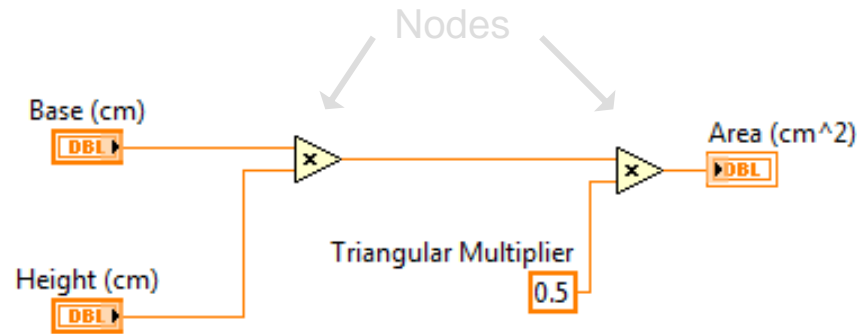

# View Terminals as Icons

- By default, View as Icon option enabled.
- Deselect View as Icon for a more compact view.

# Nodes

Nodes are objects on the block diagram that have inputs and/or outputs and perform operations when a VI runs.

# Function Nodes

- Functions are:
  - Fundamental operating elements of LabVIEW.
  - Do not have front panels or block diagrams, but do have connector panes.
  - Has a pale yellow background on its icon.
- Double-clicking a function only selects the function.
- Functions do not open like VIs and subVIs.

# SubVI Nodes

Write To Spreadsheet File.vi

- SubVIs :
  - Are VIs that you use on the block diagram of another VI.
  - Have front panels and block diagrams.
  - Use the icon from the upper-right corner of the front panel as the icon that appears when you place the subVI on a block diagram.
- When you double-click a subVI, the front panel and block diagram open.
- Any VI has the potential to be used as a subVI.

# Express VIs

- Express VIs:
  - Are a special type of subVI.
  - Require minimal wiring because you configure them with GUI dialog boxes.
  - Save each configuration as a subVI.
- Icons for Express VIs appear on the block diagram as icons surrounded by a blue field.

# Structures

- Structures in LabVIEW have the form of frames.

- Other nodes (functions, subVIs, more structures) can be inserted into the frames.

# Wires

- Wires transfer data between block diagram objects.
- Wires are different colors, styles, and thicknesses, depending on their data types.

	Floating-point	Integer	String	Boolean
Scalar				
1-D Array				
2-D Array				

- A broken wire appears as a dashed black line with a red X in the middle.

# Constants

- Constants are the source of values just as control terminals, but their value is fixed in the code.
- You can create a constant of each data type.

F

LabVIEW course

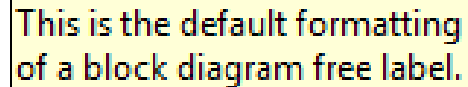

# Free labels

- A free label is a label (a text box) not attached to any object.
- Free labels can be put on the front panel or block diagram. They are created by double-clicking on empty space in the window.
- They can serve as comments or instructions to the user of the application.

This is a free label on the front panel. You can change the formatting of the text and background color as well.

This is the default formatting of a block diagram free label.

# Context Help

- Displays basic information about wires and nodes when you move the cursor over an object.
- Can be shown or hidden in the following ways:
  - Select **Help»Show Context Help** from the LabVIEW menu.
  - Press <Ctrl-H>.
  - Click the following button on the toolbar:

# LabVIEW Help

- Contains detailed descriptions and instructions for most palettes, menus, tools, VIs, and functions.
- Can be accessed by:
  - Selecting Help» LabVIEW Help from the menu.
  - Clicking the Detailed help link in the Context Help window.
  - Right-clicking an object and selecting Help from the shortcut menu.

# Examples

- LabVIEW includes hundreds of example VIs.
- Use NI Example Finder to browse and search installed examples.
  - Select **Help»Find Examples** in the menu.
- Click the example buttons in *LabVIEW Help* topics.

Open example

Find related examples

# Group Exercise

## Concept: Exploring a VI

Identify the parts of an existing VI.

---

## F. Searching for Controls, VIs and Functions

Palettes

Quick Drop

NI Global Search

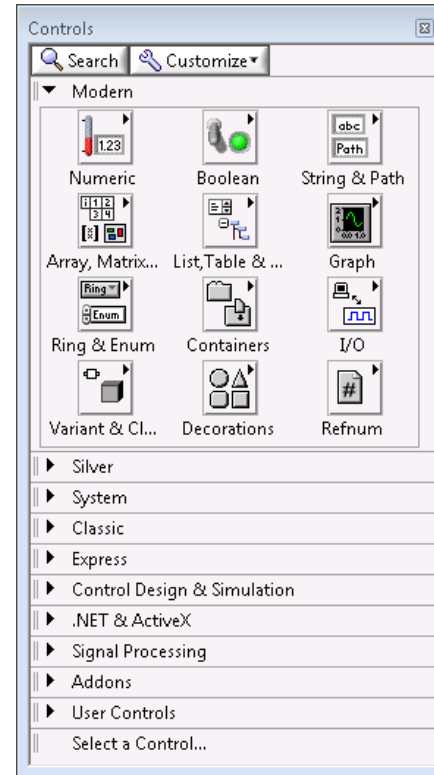

# Searching for Controls, VIs and Functions

Ways to find controls, VIs, and functions:

- Search or navigate the palettes.
  - Controls palette
  - Functions palette
- Search by name of object.
  - Quick Drop dialog box
- Search palettes, *LabVIEW Help*, and `ni.com`.
- Search text box in toolbar

# Controls Palette

- Contains the controls and indicators you use to create the front panel.
- Navigate the subpalettes or use the **Search** button to search the Controls palette.

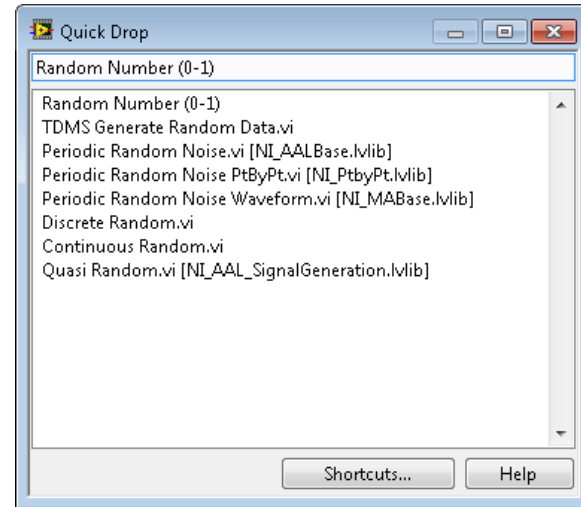

# Functions Palette

- Contains the VIs, functions, and constants you use to create the block diagram.
- Navigate the subpalettes or use the **Search** button to search the Functions palette.

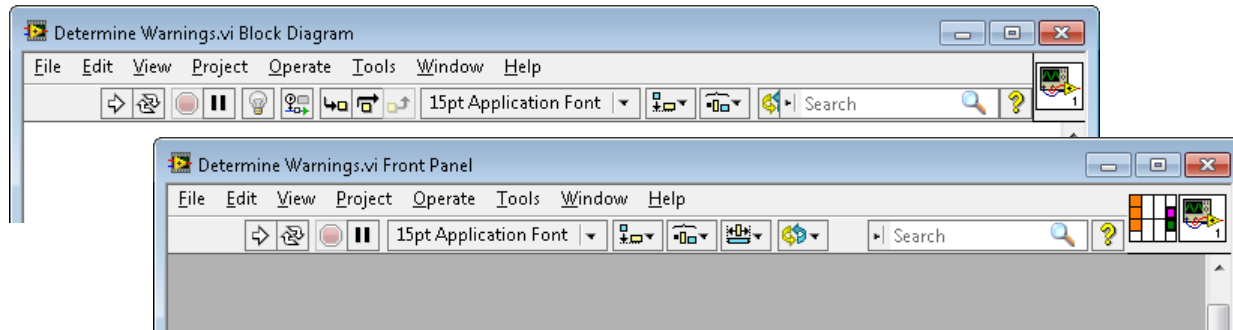

# Searching with Quick Drop

- Lets you quickly find controls, functions, VIs, and other items by name.
- Press the <Ctrl-Space> keys to display the Quick Drop dialog box.

# Global Search

Use the Search bar in the top right of the front panel and block diagram windows to search palettes, *LabVIEW Help*, and `ni.com`.

# Search for Controls, VIs and Functions

- Configure palettes to customize visible palettes.
- Search and navigate the palettes.
- Search for help using global search.
- Use Quick Drop to search by name.

---

# G. Selecting a Tool

Selecting a Tool

Block Diagram Clean-Up

# Selecting a Tool

- A tool is a special operating mode of the mouse cursor.
- Create, modify, and debug VIs using the tools provided by LabVIEW.
- By default, LabVIEW automatically selects tools based on the context of the cursor.
- If you need more control, use the **Tools** palette to select a specific tool.
  - Select **View»Tools Palette** to open the **Tools** palette.

# Wiring Tips

- Press <Ctrl-B> to delete broken wires.
- Right-click and select **Clean Up Wire** to reroute the wire.

# Wiring Tips – Clean Up Diagram

Use the Clean Up Diagram tool to reroute multiple wires and objects and to improve readability.

1. Select a section of your block diagram.
2. Click the Clean Up Diagram button on the block diagram toolbar (or press <Ctrl-U>).

# Cloning and Moving Items

- Move an object using the following steps:
  1. Select the Positioning tool.
  2. Click and drag the object to new location.
  
- Clone an object using the following steps:
  1. Select the Positioning tool.
  2. Press the <Ctrl> key while clicking an object.
  3. Drag the copy to new location.

# Selecting, Editing, Resizing and Wiring

- Select item to move, copy, or delete
- Edit text
- Resize an object
- Wire terminals and nodes
- Automatic and manual tool selection

# Setting Options for the Environment

- In **Tools»Options...** dialog box you can customize settings for the LabVIEW environment.
- Suggested changes:
  - Front Panel page
    - Set Control Style for New VIs to **Silver style**
  - Block Diagram page
    - Uncheck **Place front panel terminals as icons**
    - Configure **Block Diagram Cleanup** to customize your block diagram

---

# H. Dataflow

# Dataflow

LabVIEW follows a dataflow model for running VIs.

- A node executes only when data are available at all of its required input terminals.
- A node supplies data to the output terminals only when the node finishes execution.

# Dataflow – Quiz

What are the nodes in this fragment of code?

Which node executes first?

# Dataflow – Quiz Answer

There are two nodes: „square” and „greater than?” functions.

Square executes first.

# Dataflow – Quiz

Which node executes first?

- a) Add
- b) Subtract
- c) Random Number
- d) Divide
- e) Sine

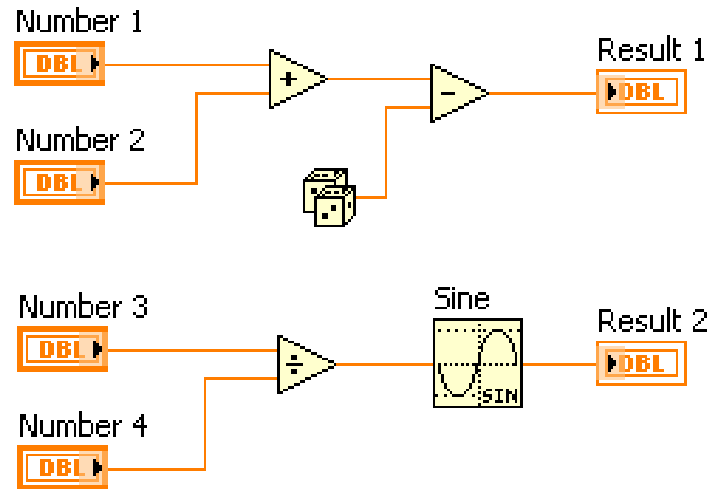

# Dataflow – Quiz Answer

No single correct answer.

Which node executes first?

- a) Add – **Possibly**
- b) Subtract – **Definitely not**
- c) Random Number – **Possibly**
- d) Divide – **Possibly**
- e) Sine – **Definitely not**
