

Review of Gravitational Wave Results from the LIGO-Virgo-Kagra Collaboration

Tuesday 21 September 2021 09:10 (35 minutes)

It has been 6 years since the first gravitational wave event GW150914. Here, I review some of the most recent and exciting gravitational wave results. I will discuss the status of the current gravitational wave detectors and their performance as a network. I will summarize the, gravitational wave detections of the past observing runs, as well as the perspectives of the future observing runs. I will also highlight several special events.
