

Alice and LHCb in the HL-LHC era.

Thursday, 27 January 2011 19:10 (25 minutes)

So far all the upgrade schemes have been studied assuming only two general purpose detectors, ATLAS and CMS, operating. Will Alice and LHCb run in HL-LHC time? When and what process to decide it? What are the beam parameters they want to exploit and the hardware changes they need in case of an upgrade?

Presenter: BERTOLUCCI, Sergio (CERN)

Session Classification: Session 08 High Luminosity (HL-LHC)
