

Chapter 5: 1st Editor Feedback

- ▶ Short comments and observations
 - ▶ Nice account of future plans and technology developments
 - ▶ A short intro would help to set the scene (CERN as an example)
 - ▶ Overlap with Chapter 4 (physics)?
 - ▶ Technical editing needed (format, sub-chapter indexing etc.)
 - ▶ (Final) conclusions missing (to address questions 4-6)
 - ▶ References missing
 - ▶ Condensing may be needed (currently 16 pages, not including references)

Editor 2 – Chapter 5

- ▶ Michael's outline is excellent and need to integrate Panos inputs.
- ▶ This chapter looks at the Future LHC and some of the challenges for particle physics community
- ▶ A section to bring together past experience and how FLHC could avoid falling into some difficulties would be desirable.
- ▶ A section on the commentary of future physics, cost and efforts involved and justification for the benefits can be useful – although it is hard to have cost benefit analysis of FLHC, it would be useful to reflect on cost/benefits
