

Chapter 8: 1st Editor Feedback

- ▶ Short comments and observations
 - ▶ Interesting account about the scientific and technological challenges facing the Australian astronomy community and the Gravitational waves community (LIGO, US)
 - ▶ The success and potential failures – name of Chapter 8 – remain a bit hidden in the current version and would merit a clearer summary or emphasis (in the conclusions? Any take-aways from Chapter 2?)
 - ▶ Would benefit from a short intro setting the scene, e.g. examples of global Big Science efforts seen from the Australian and US perspectives
 - ▶ Conclusions missing
 - ▶ Slight condensing needed (currently 17 pages, including references)

2nd Editor -Chapter 8

- Great chapter which outlines big science other than CERN.
- Examples of astrophysics and introduction of gravitational waves and black holes well presented.
- ESO and telescope section needs careful editing and checking
- Section explaining Australian contribution to astrophysics and connection to future physics problems well presented.
- Some work need to be done to integrate all section to seamless story line
