

Chapter 9: 1st Editor Feedback

- ▶ Short comments and observations
 - ▶ The introduction (abstract) makes an interesting proposition but the chapter structure and inserted texts (eg NTOF) look incomplete and disconnected
 - ▶ Interesting ingredients (social value of basic science, social value, leadership, human value, art and science etc.) but they do not make a natural flow
 - ▶ An introduction to the Chapter would be helpful, to connect the ingredients with the context of Big Science (referring to e.g. chapters 1, 12, 14 etc.)
 - ▶ References are incomplete and scattered in several places
 - ▶ Conclusions missing
 - ▶ Length on the low side? (currently 6 pages)

Editor 2 - Comments

- ▶ Another great examples of how big science can contribute to human health and wellbeing.
- ▶ Once all elements in the chapter will be very useful to see how knowledge get translated to medical applications.
- ▶ There are other examples from CERN like Medepix that authours may want to cross reference.
- ▶ Authours may also refer to detector technology as one of the key outcomes of big science investment.
