

Welcome to the

9th CERN Patatrack Hackathon @TUE

Yanja Dajsuren, Reijn van den Burg, Damian Tamburri, Ekhtiar Syed,
Gemma Catolino, Dario Di Nucci for TUE

Leonardo Cristella, Loukas Gouskos, Benedikt Maier, Huilin Qu,

Felice Pantaleo, Wahid Redjeb, Marco Rovere for CERN

<https://indico.cern.ch/e/tue-hackathon-9>

felice@cern.ch

Patatrack

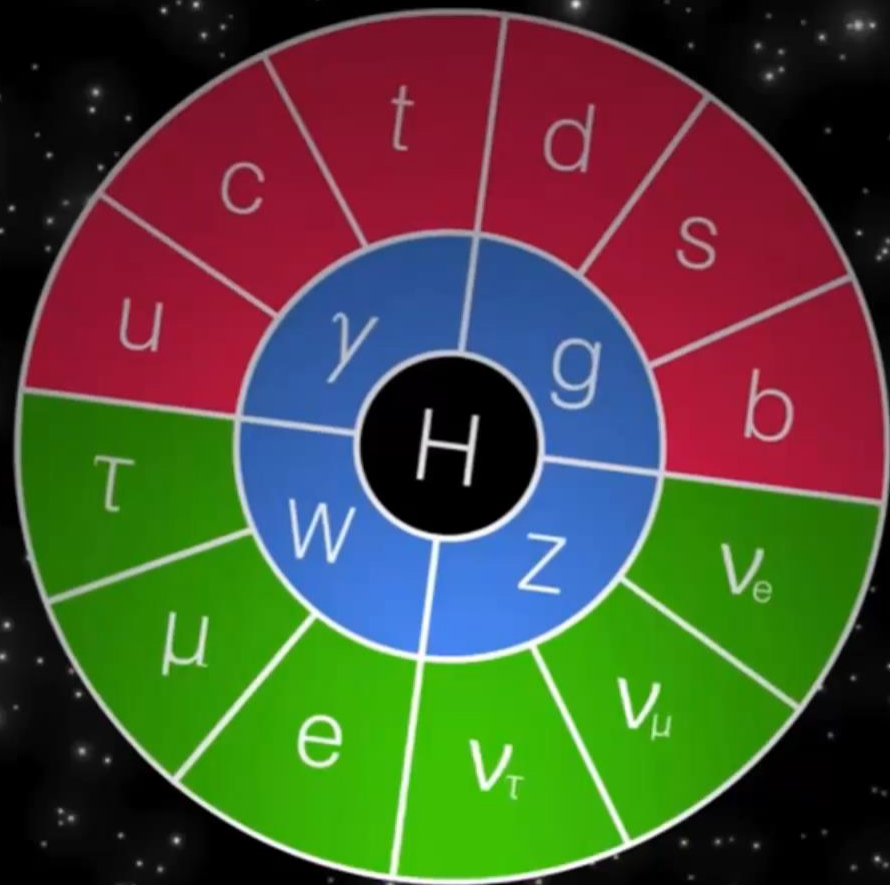

- Patatrack is a software R&D incubator
- Born in 2016 by a very small group of passionate people at CERN
- Interests: algorithms, HPC, heterogeneous computing, machine learning, software engineering

HISTORY OF THE UNIVERSE

0) Is the theory correct?

We discovered the Higgs boson

We don't know much about it

1) Antimatter

Big bang: equal amounts of matter
and antimatter

Today our universe exists...

Why?

2) What about the rest of our universe?

1949

CERN today

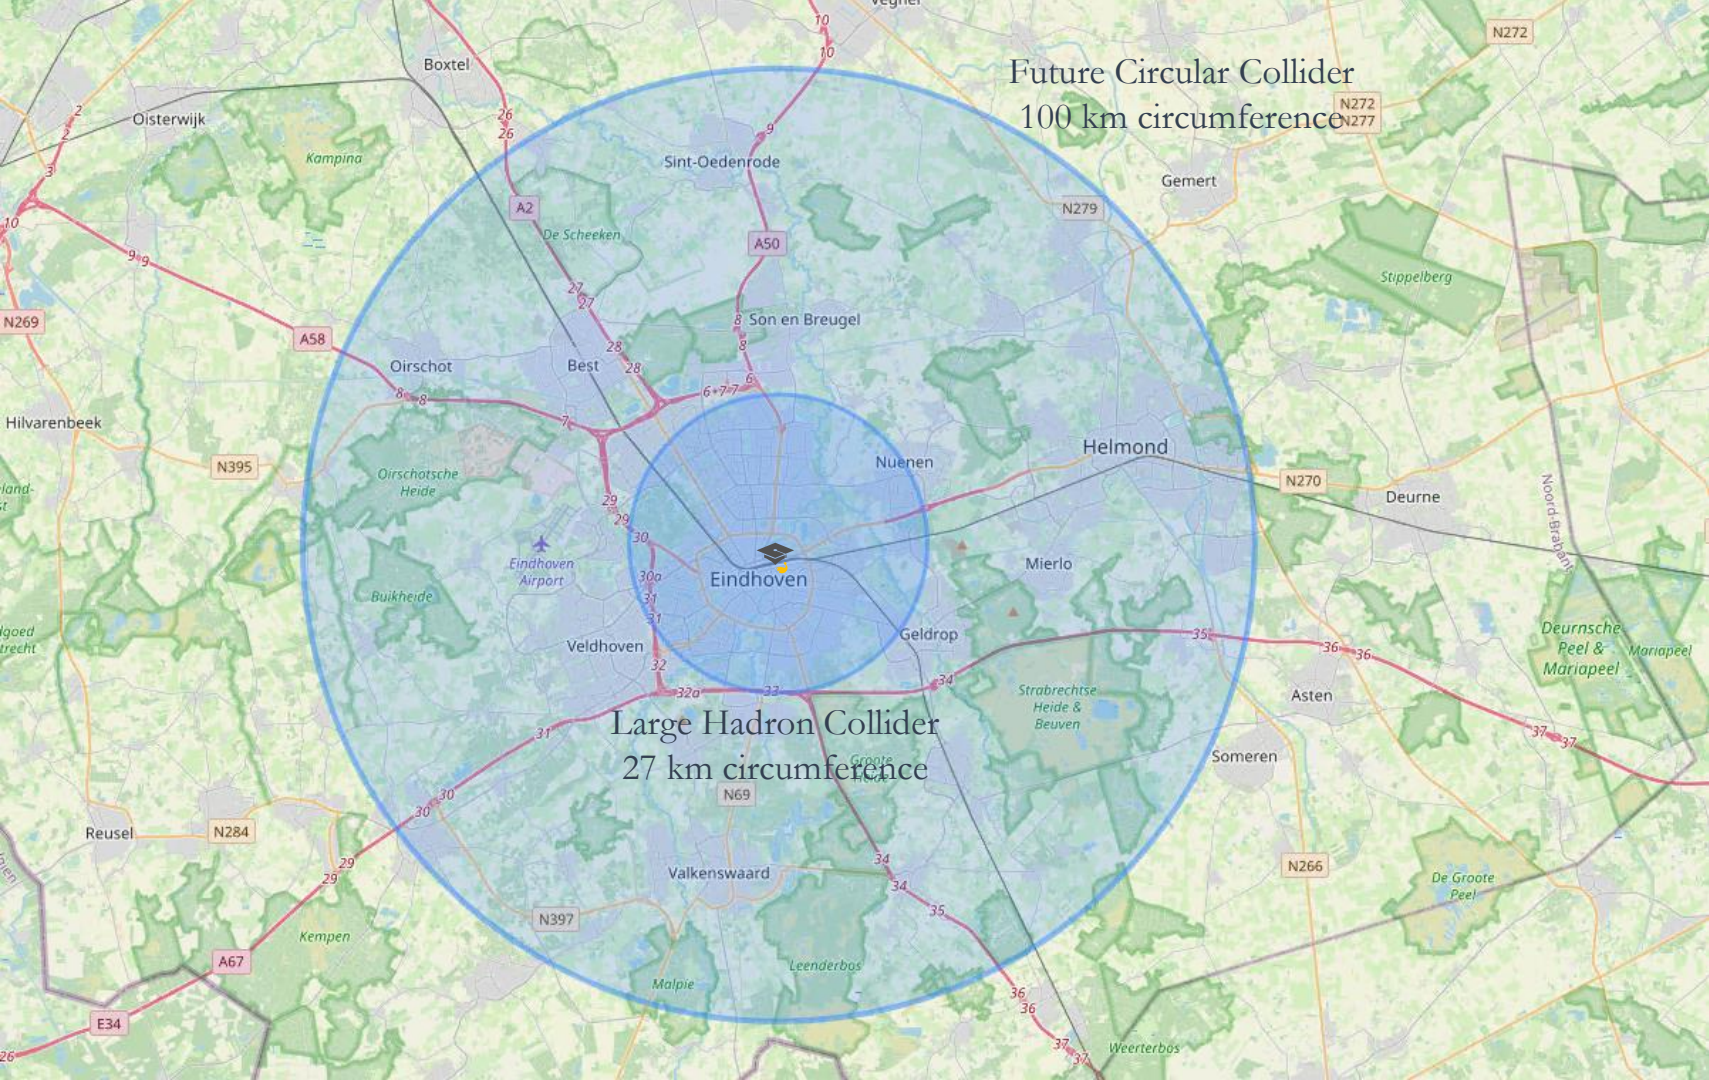

Today CERN has 23 Member States: Austria, Belgium, Bulgaria, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Israel, Italy, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovak Republic, Spain, Sweden, Switzerland and United Kingdom.

Cyprus, Estonia and Slovenia are Associate Member States in the pre-stage to Membership.

Croatia, India, Lithuania, Pakistan, Turkey and Ukraine are Associate Member States.

Future Circular Collider
100 km circumference

Large Hadron Collider
27 km circumference

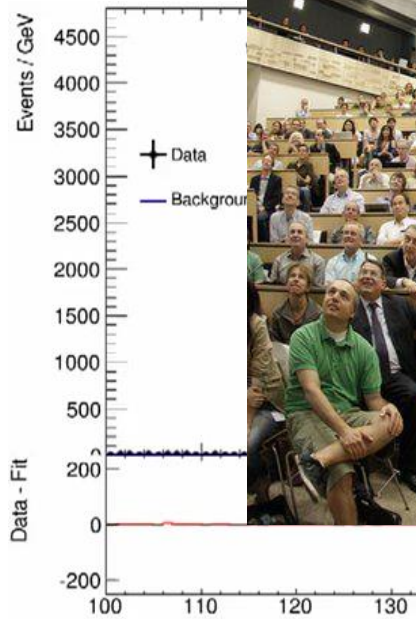

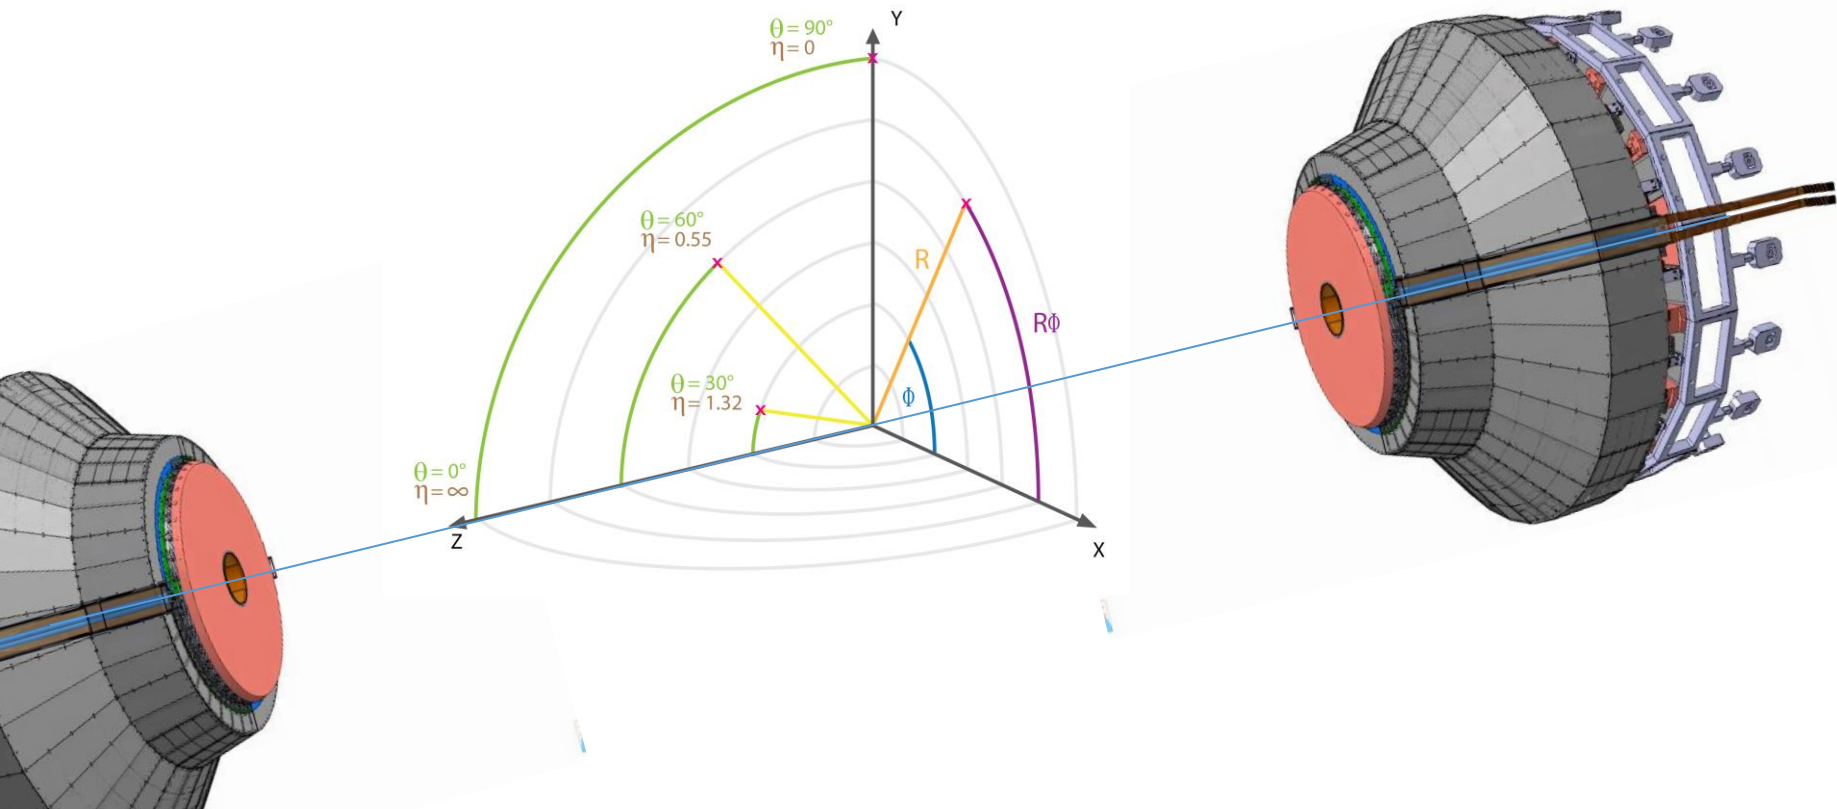

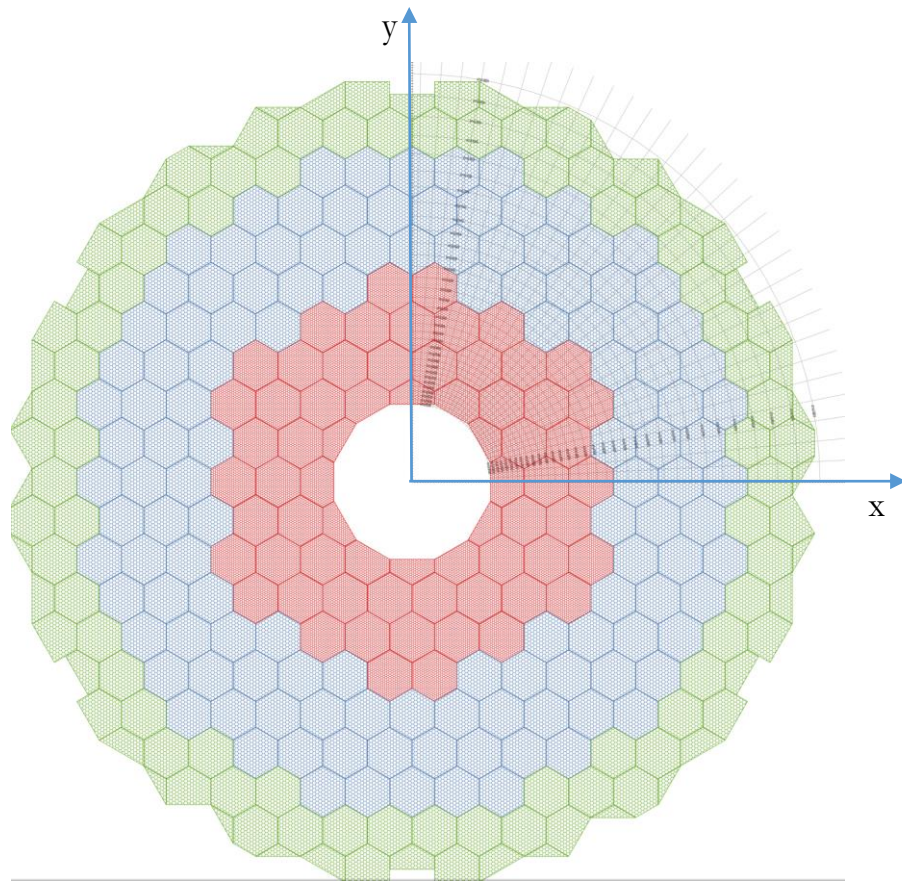

The Hackathon

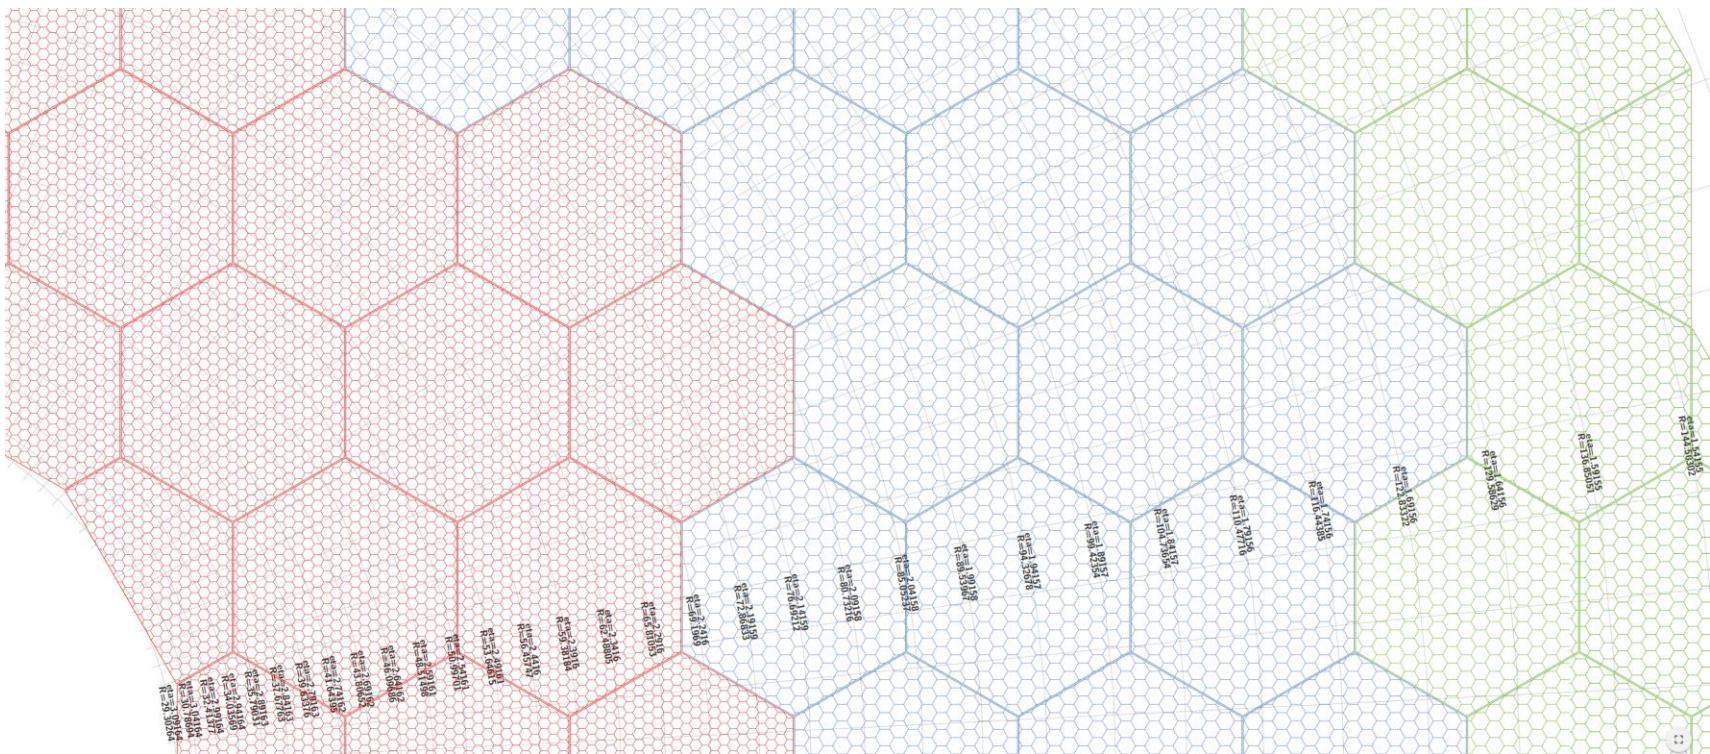

The Phase-2 CMS detector

Layer Clusters

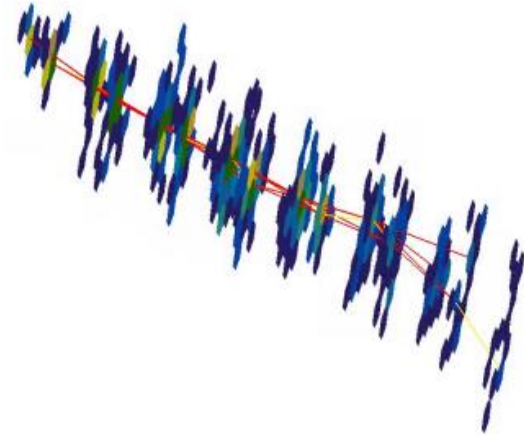

CMS Experiment at LHC, CERN
Data recorded: Thu Jan 1 00:00:00 1970 UTC
Run/Event: 1 / 10
Lumi section: 1

CMS Experiment at LHC, CERN
Data recorded: Thu Jan 1 00:00:00 1970 UTC
Run/Event: 1 / 10
Lumi section: 1

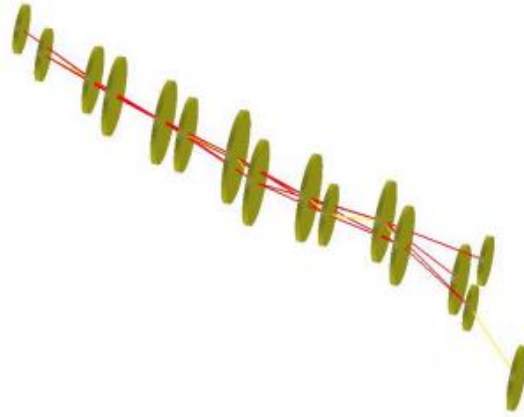

A pattern recognition to rule them all

A pattern recognition to rule them all

A pattern recognition to rule them all

Input dataset

Layerclusters (lc) to be linked together in a 3d trackster

Input dataset would look like:

lc_id	pos_x	pos_y	pos_z	layerId	Energy	time	eta	phi	truth_TracksterIDs	fractions
5	11.4	88.3	327.1	18	20	5	1.8	2.7	<2,17,19>	<0.3,0.4,0.3>

The truth is out there!

You will have the truth information as SimTracksters together with the true fractions

Expected output

Assign each layercluster in input to at most 3 tracksters with a fraction of the energy

lc_id	Reconstructed trackster ids	Reconstructed fractions
5	<2,17,19>	<0.3,0.4,0.3>

You can start with a one-to-one association between layerclusters and tracksters

The challenge

- You have until Wednesday 14/07 at 8am to submit a solution
- We will execute your solution on Wednesday morning over an evaluation dataset and produce a score for each of the proposed solutions
- On Wednesday afternoon you will be asked to present your solution with what you think are its pros and cons, together with some “future possible improvements”
- Winners will be announced on Wednesday at 4pm

The CERN team

Leonardo Cristella

Senior Applied Fellow at CERN

Physics analyses: B Physics

Machine learning techniques for event reconstruction

Particle shower reconstruction in HGCal, Computing+Data
Management

Loukas Gouskos

Staff Physicist at CERN

Physics analyses: Higgs measurements and searches for new physics

Jet physics particularly with the deployment of Machine learning techniques

CMS Upgrades towards High-Luminosity LHC: High Granularity
Calorimeter (HGCAL) focusing on the particle shower reconstruction

Future experiments: FCC-hh/ee

Benedikt Maier

Senior Research Fellow at CERN

Physics analyses: searches for dark matter and dark interactions

Machine learning techniques for event reconstruction

Particle shower reconstruction in HGCal, Computing+Data
Management

Felice Pantaleo

Staff Physicist at CERN

Pattern Recognition and Algorithms

Heterogeneous computing and Performance Portability

Quantum Computing

Huilin Qu

Senior Research Fellow at CERN

Physics analyses: Higgs measurements and searches for new physics

Jet physics particularly with the deployment of Machine learning techniques

CMS Upgrades towards High-Luminosity LHC: High Granularity
Calorimeter (HGCAL) focusing on the particle shower reconstruction

Wahid Redjeb

- PhD at RWTH in collaboration with CERN
- Software development for High Energy Physics
- CMS High Granularity Calorimeter (HGCal) particle shower reconstruction
- Heterogeneous Computing

Marco Rovere

Staff Physicist at CERN

Pattern Recognition and Algorithms

Heterogeneous computing and Performance Portability

Support during hackathon

Some of us will be always connected during the hackathon to provide support

A mattermost team was created

https://mattermost.web.cern.ch/signup_user_complete/?id=by1b4s3ap3fobbbcekyymobse

Enjoy the hacking!
