

Guest lecture: Why is Higgs still a star?

Thursday, 14 October 2021 09:00 (1 hour)

The discovery of the Higgs boson particle in 2012 was an astonishing triumph of high energy physics. In this talk I will try to convince you that precision measurements of the Higgs boson properties are a very exciting prospect. Not only it will lead to a better understanding of our Universe but it is also one of our best windows in to the unknown.

Summary

Presenter: SCULAC, Toni (University of Split)

Track Classification: Additional lectures
