Transport requirements

Thursday 2 June 2022 14:00 (20 minutes)

Logistic of equipment and personnel is a major aspect during the assembly, installation but also operation of the future FCC. The transport and handling tools and means need to be studied in details, in an early phase, in order to control the associated costs as well as the duration of interventions.

The presentation will give an overview on the requirements for the special vehicles dedicated to the underground transportation and handling of magnets for FCC-ee machine, transportation of people and their tooling, mainly focusing on dimensions, performance and boundaries conditions.
