Synopsis Document

SYNOPSIS OF THE 2021 ECFA DETECTOR
RESEARCH AND DEVELOPMENT ROADMAP

by the European Committee for Future Accelerators
Detector R&D Roadmap Process Group

European Strategy
Update

ECFA
European Committee
for Future Accelerators

_Building the Foundations

"Strong planning and appropriate investments in Research and Development (R&D) in relevant technologies are essential for the full potential, in terms of novel capabilities and discoveries, to be realised."

The field of particle physics builds on the major scientific revolutions of the 20th century, particularly on the experimental discoveries and theoretical developments which culminated in the Nobel Prize-winning discovery of the Higgs boson at CERN in 2012. The ambitions for the field going forward are set out from a European perspective in a global context in the European Strategy for Particle Physics (ESPP) which was updated in 2020. This strategy lays down a vision for the coming half-century, with a science programme which, in exploring matter and forces at the smallest scales and the Universe at earliest times, will continue to provide answers to questions once thought only to be amenable to philosophical speculation, and has the potential to reveal fundamentally new phenomena or forms of matter never observed before.

The ESPP recognises the huge advances in accelerator and detector technologies since the world's first hadron collider, the Intersecting Storage Rings, started operation at CERN 50 years ago. These advances have not only supported, and in turn benefited from, numerous other scientific disciplines but have spawned huge societal benefits through developments such as the World Wide Web, Magnetic Resonance Imaging, Positron Emission Tomography and 3D X-ray imaging.

Installation of the CMS Central Tracking Detector with 10 million read-out channels and using silicon detectors covering an area of over 200 m². (© CERN)

The far-reaching plans of the ESPP require similar progress over the coming decades in accelerator and detector capabilities to deliver its rich science programme. Strong planning and appropriate investments in Research and Development (R&D) on relevant technologies are essential for the full potential, in terms of novel capabilities and discoveries, to be realised.

The 2020 update of the ESPP called on the European Committee for Future Accelerators (ECFA) to develop a global Detector R&D Roadmap defining the backbone of detector R&D required to deploy the community's vision. This Roadmap aims to cover the needs of both the near-term and longer-term programme, working in synergy with neighbouring fields and with a view to potential industrial applications.

Event display of a candidate Higgs boson decaying into two photons as recorded by the CMS experiment. (© CERN)

ATLAS gas detector based muon spectrometer, which covers a total area the size of a football field and measures the paths of the muons that pass through it to an accuracy of better than a tenth of a millimetre. (© CERN)

_Setting the Priorities

"To fully explore the properties of the Higgs boson and study many of the other deepest questions in physics necessitates the development of a roadmap for the required detector technologies."

Vertex Locator (VELO) of the LHCb experiment allowing short lived particle lifetimes to be measured with precision of a twentieth of a picosecond. (© CERN)

Insertion of lead tungstate crystals (cover three times the density of conventional glasses) into the high granularity electromagnetic calorimeter of the ALICE detector giving percent scale energy measurements. (© CERN)

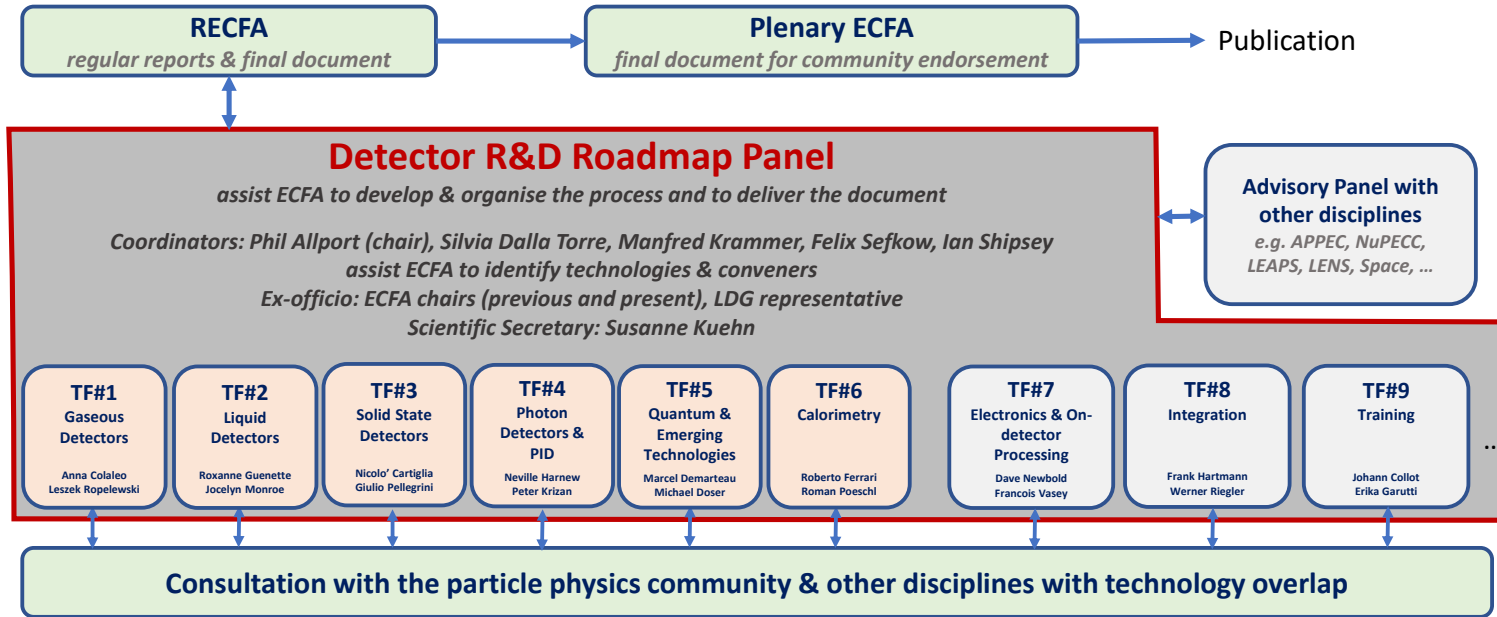

ProtoDUNE: three hundred cubic metre volume prototype Liquid Argon Neutrino Detector being constructed at CERN. (© CERN)

The highest priority laid down by the updated ESPP is for a future Higgs factory to thoroughly explore the properties of this completely new type of particle, which is seen as a key to a much deeper understanding of how the Universe works. Until the discovery of the Higgs boson, every known particle was either a "matter" or a "force" particle, describing the world in terms of fundamental entities and their interactions without being able to accommodate the fact that particles also have mass. In the ESPP, the vision for the future facilities to fully explore the properties of the Higgs boson and study many of the other deepest questions in physics necessitates the development of a roadmap for the required detector technologies (in much the same way as the LHC and its upgrades significantly guided R&D planning for previous decades). The ECFA Detector R&D Roadmap addresses this need whilst highlighting synergies with other projects on nearer timescales and showing how they are also embedded in the longer-term context.

In the area of detector development, it is vital to build on Europe's world-leading capabilities in sensor technologies for particle detection, using gas and liquid-based or solid-state detectors, as well as energy measurement and particle identification. Also required are cutting-edge developments in bespoke microelectronics solutions, real-time data processing and advanced engineering. Adequate resourcing for such technology developments represents a vital component for future progress in experimental particle physics. Talented and committed people are another absolutely core requirement. They need to be enthused, engaged, educated, empowered and employed. The ECFA Detector R&D Roadmap brings forward concrete proposals for nurturing the scientists, engineers and technicians who will build the future facilities and for incentivising them by offering appropriate and rewarding career opportunities.

The Detector R&D Roadmap Process

- **Task forces** were composed of experts from the community covering key sub-topics in the relevant technology areas, including **two conveners** (who are part of the Roadmap Panel)
- Progress with emerging technologies in adjacent fields is provided through an **Advisory Panel with Other Disciplines** (→ expert contacts by Task Forces area)

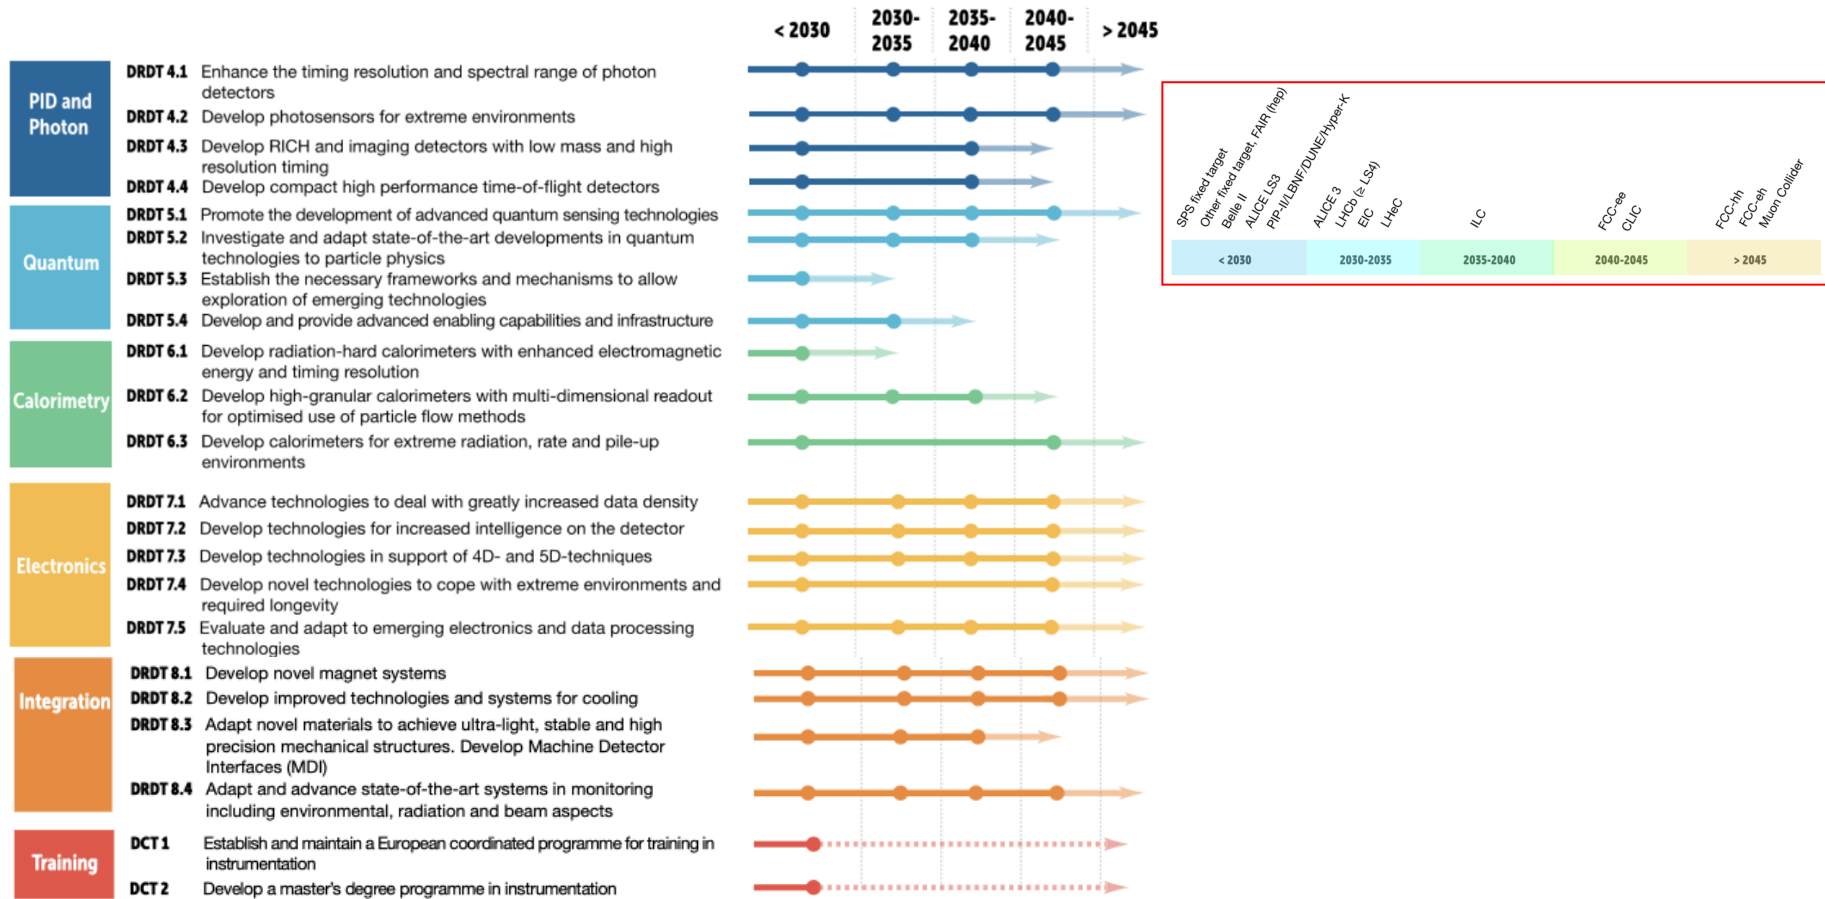

Information on the full process: [ECFA Detector R&D Roadmap](#)

Detector R&D Roadmap: Detector R&D Themes (DRDTs)

- Stepping stones are shown to represent the R&D needs of facilities intermediate in time.
- The faded region acknowledges the typical time needed between the completion of the R&D phase and the readiness of an experiment at a given facility.
- Future beyond the end of the arrows is simply not yet defined, **not that there is an expectation that R&D for the further future beyond that point will not be needed.**

Detector R&D Roadmap: Detector R&D Themes (DRDTs)

Detector R&D Roadmap: General Strategic Recommendations

- GSR 1 - Supporting R&D facilities
- GSR 2 - Engineering support for detector R&D
- GSR 3 - Specific software for instrumentation
- GSR 4 - International coordination and organisation of R&D activities
- GSR 5 - Distributed R&D activities with centralised facilities
- GSR 6 - Establish long-term strategic funding programmes
- GSR 7 - Blue-sky R&D
- GSR 8 - Attract, nurture, recognise and sustain the careers of R&D experts
- GSR 9 - Industrial partnerships
- GSR 10 - Open Science

More details in backup slides

Next Steps: Implementation Plan

In its December meeting, CERN Council has mandated ECFA to work out a plan

“The Council further took note of the report by the Scientific Policy Committee Chair, Professor Rivkin, on the SPC’s positive response to the roadmaps [Accelerator and Detector R&D] at its September and December meetings, and of the statements by delegations voicing support for the content of the documents and expressing appreciation to ECFA, the LDG and all the members of the respective communities who had contributed to the preparation of the roadmaps.

*The Council agreed **to invite ECFA and the LDG to elaborate, in close collaboration with the SPC, the funding agencies and the relevant research organisations in Europe and beyond, detailed implementation plans** setting out milestones, priorities and funding sources, for consideration by the Council at its Session in March 2022.”*

Consensus that momentum must be kept and a plan be put in place as early as possible

Next Steps: Implementation Plan

- ECFA Roadmap Coordination group has been entrusted to work out the implementation plan

Coordination Group: Phil Allport, Silvia Dalla Torre, Jorgen D'Hondt, Karl Jakobs,
Manfred Krammer, Susanne Kühn, Felix Sefkow and Ian Shipsey
- To be iterated with Restricted ECFA
- Discussions with Funding Agencies are planned (together with LDG) before March Council week
- First presentation and discussion in March Council

2. Physics, Experiments and Detectors at a Future Higgs/EW/Top Factory

Plenary ECFA statement (July 2020)

- ECFA recognizes the need for the experimental and theoretical communities involved in physics studies, experiment designs and detector technologies at future Higgs factories to gather. **ECFA supports a series of workshops** with the aim to **share challenges and expertise, to explore synergies in their efforts** and to respond coherently to this priority in the European Strategy for Particle Physics (ESPP).

Goal: bring the entire e^+e^- Higgs factory effort together, foster cooperation across various projects; collaborative research programmes are to emerge

- Study has been launched, **Working Groups** have started their activities, important **Topical Meeting** have been held / are upcoming
- The study is open to all interested physicists and a strong participation from the ILC, CLIC, FCC-ee and CEPC communities and beyond, e.g. (HL)-LHC, Belle, ... are highly welcome; Also open for cooperation with other activities, e.g. Snowmass, ...

ECFA Working Groups

WG 1: Physics Potential

Convener: Juan Alcaraz (CIEMAT - Madrid), Jenny List (DESY), Fabio Maltoni (UC Louvain / Bologna) and ~~James Wells (Univ. Michigan)~~ Jorge de Blas (Granada)

WG 2: Physics Analysis Methods

Convener: Patrizia Azzi (INFN-Padova / CERN), Fulvio Piccinini (INFN Pavia) and Dirk Zerwas (IJCLab / DMLab)

[Kick-off meeting](https://indico.cern.ch/event/1033941/) to start WG1 and WG2 activities took place on 18th June: <https://indico.cern.ch/event/1033941/>

WG 3: Detector R&D

Activities to be aligned with the [ECFA Detector R&D Roadmap](#) implementation

It may be possible that important detector R&D activities can be embedded in the defined Detector R&D Themes (DRDTs) of the ECFA Detector R&D Roadmap and in the emerging structures set up during the implementation process

**Overall Goal: ECFA workshops in 2022 and 2023;
Final Report in 2024**

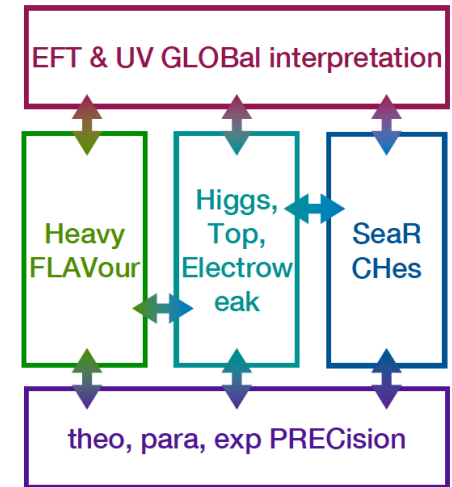

- Status of Working Group activities
- Discussion of future plans
- Interaction between theory and experiments
- ...
- An important **Outreach Event** is planned;

Public Talk (kick-off for e⁺e⁻ activities / next large collider in Europe)

Ongoing Activities of WG1 and WG2

- **WG1:** Five sub-activities have been established:
 - **WG1-GLOB:** Global interpretation in (SM)EFT and UV complete models
 - **WG1-PREC:** Precision calculations and theoretical, parametric and experimental syst. uncertainties
 - **WG1-HTE:** Higgs, top and electroweak physics, incl. high-pT
 - **WG1-FLAV:** Flavour physics
 - **WG1-SRCH:** Direct discovery potential, incl. FIP
- **Seminar Series**
(to be established, together with WG2)

Juan Alcaraz, Jorge de Blas,
Jenny List, Fabio Maltoni

<https://indico.cern.ch/event/1044297/page/23971-wg1-group-activities>

- **WG1-GLOB:** Global interpretation in (SM)EFT and UV complete models
 - concrete scenarios: mapping on EFT and selection of uncovered scenarios (aim: select the concrete BSM scenarios that should be investigated and the relevant experts)
 - EFT developments beyond today's state-of-the-art: CP violation, flavour, uncertainties (aim: select key directions in EFT evolution that are relevant for us)
 - Fingerprinting new physics: how do we infer the underlying new physics if we see deviations in measurements/EFT fits and excesses searches?
 - Pick up Snowmass SMEFT fit activities in summer
- **WG1-PREC:** Precision calculations and theoretical, parametric and experimental syst. Uncertainties
 - Planning first meeting on $\alpha_s(M_Z)$, $\alpha_{\text{QED}}(M_Z)$, m_{top} -> end of February?
 - General discussion on conventions and assumptions of theory and experimental systematic uncertainties
- **WG1-HTE:** Higgs, top and electroweak physics, incl. high-pT
 - First workshop 3 afternoons April 20-22, hybrid (CERN)
 - One afternoon for Higgs, top, EW each, picking up after Snowmass white papers are out
- **WG1-FLAV:** Flavour physics
 - Identified various topics, incl. connection with B-anomalies, LFU/LFV, Vcb from W decays, flavour in high-pt tails of $ee \rightarrow ff$, flavour with polarised beams, new physics in b / tau decays, ...
 - Aiming for first workshop May/June
- **WG1-SRCH:** Direct discovery potential, incl. FIP
 - Start by making a list of people interested
=> O (50) people on mailing list already either doing work already or expressing serious interest
 - "mapping" of BSM scenarios vs experimental approaches considered so far, identify "holes"
 - Planning on first workshop in spring

Ongoing Activities of WG1 and WG2

Patrizia Azzi, Fulvio Piccinini,
Dirk Zerwas

- **WG2:** Has started to organise a series of important **Topical Meetings:**
 - **First Topical Meeting on Generators** on 9 -10th November 2021: <https://indico.cern.ch/event/1078675/>
(common workshop for WG1 and WG2)
 - **Second Topical Meeting on Simulation** on 1 -2nd February 2022: <https://indico.cern.ch/event/1097819/>
 - **Third Topical Meeting on Reconstruction** scheduled for 4 – 5th May 2022
(Agenda will develop here: <https://indico.cern.ch/event/1124095/>)
- Follow-up in dedicated Focus Meetings
- Organisation in close interaction with **Software Ecosystem (KEY4HEP)** representatives of the various communities (Frank Gaede ILC, Gerardo Ganis FCC-ee, and André Sailer CLIC)

WG2

Focus Meetings

Access to Information, e-group

- Major entry portal to collect information on the ongoing activities:

<https://indico.cern.ch/event/1044297/> All upcoming events will be announced there!

- Registration of kick-off meeting has been used to define an e-group for further information

ECFA-Workshop-Higgs-factory@cern.ch

Subscription is still possible, please do so, if interested!

3. Joint ECFA-NuPECC-APPEC Activities

Six Expressions of Interest endorsed:

- *Dark Matter (iDMEu)*
- *Machine-learning Optimized Design of Experiments (MODE)*
- *Gravitational Waves for fundamental physics*
- *Nuclear Physics at the LHC*
- *Storage Rings for the Search of Charged-Particle Electric Dipole Moments*
- *Synergies between EIC and LHC*

(ECFA participation in **blue**)

Expressions of Interest and more information:

<http://nupecc.org/jenaa/?display=eois>

Next JENA Seminar in Madrid 2022

3 – 6 May 2022

<https://indico.cern.ch/event/1040535/>

JENAS-2022

2nd Joint ECFA-NuPECC-APPEC Seminar

Exploring synergies between Particle, Astroparticle and Nuclear Physics

TOPICS:

- Physics highlights
- Future projects and overall strategies
- Detector technologies
- Computing and software
- Diversity and recognition in large scale projects
- Education and Outreach
- Transfer of knowledge

May 3-6, 2022
Madrid, Spain

The many synergies between **Particle, Astroparticle and Nuclear Physics** are addressed in the second Joint Seminar. Physics highlights, future projects and strategies as well as challenges in detector technology and computing are discussed.

JENAS 2022 Committee

ECFA: Karl Jakobs (Univ. Freiburg)
Patricia Conde Muñio (LIP, Lisboa)
Jorgen D'Honnin (VUB, Brussels)

APPEC: Andreas Haungs (KIT, Karlsruhe)
Katharina Henjes-Kunst (DESY, Hamburg)
Teresa Montarull (Univ. Geneva)

NuPECC: Marek Lewitowicz (GANIL, Caen)
Eberhard Widmann (SMI, Wien)
Gabriele-Elisabeth Körner (TU Munich, Garching)

Local Committee

María José García Berge (IEM, Madrid)
Antonio Bueno (UGR, Granada)
Carlos Peña Garay (LSC, Canfranc)
Joaquín Gómez Camacho (US, Sevilla)
Celia Martínez Rivero (IFCA, Santander)
Luis Mario Fraile (UCM, Madrid)

- Discussion of Joint ECFA-NuPECC-APPEC Activities
- Discussion with Funding Agencies

- Topics:
- Present the Science Case, Big Questions
 - Detector R&D, Computing;
Discussion on (additional, common) funding for these activities;
 - Governance models for large facilities
 - ...

ECFA
European Committee for Future Accelerators

NuPECC

APPEC

ECFA Early Career Researchers Panel

“The objective of the ECFA Early-Career Researchers (ECR) Panel is for its members to discuss all aspects that contribute in a broad sense to the future of the research field of particle physics.”

The ECR Panel has appointed an **Organising Committee**, responsible for organising and chairing meetings, and handling outside correspondences with the ECR panel.

More information: <https://ecfa.web.cern.ch/ecfa-early-career-researchers-panel>

Email contact: ecfa-ecr-organisers@cern.ch

Backup Slides

Detector R&D Roadmap: General Strategic Recommendations

GSR 1 - Supporting R&D facilities

It is recommended that the structures to provide **Europe-wide coordinated infrastructure in the areas of: test beams, large scale generic prototyping and irradiation be consolidated and enhanced to meet the needs of next generation experiments** with adequate centralised investment to avoid less cost-effective, more widely distributed, solutions, and to maintain a network structure for existing distributed facilities, e.g. for irradiation

GSR 2 - Engineering support for detector R&D

In response to ever more integrated detector concepts, requiring holistic design approaches and large component counts, the R&D should be supported with **adequate mechanical and electronics engineering resources**, to bring in expertise in state-of-the-art microelectronics as well as advanced materials and manufacturing techniques, to tackle generic integration challenges, and to maintain scalability of production and quality control from the earliest stages.

GSR 3 - Specific software for instrumentation

Across DRDTs and through adequate capital investments, the availability to the community of **state-of-the-art R&D-specific software packages must be maintained and continuously updated**. The expert development of these packages - for core software frameworks, but also for commonly used simulation and reconstruction tools - should continue to be highly recognised and valued and the community effort to support these needs to be organised at a European level.

GSR 4 - International coordination and organisation of R&D activities

With a view to creating a vibrant ecosystem for R&D, connecting and involving all partners, there is a **need to refresh the CERN RD programme structure and encourage new programmes for next generation detectors**, where CERN and the other national laboratories can assist as major catalysers for these. It is also recommended to revisit and streamline the process of creating and reviewing these programmes, with an extended framework to help share the associated load and increase involvement, while enhancing the visibility of the detector R&D community and easing communication with neighbouring disciplines, for example in cooperation with the ICFA Instrumentation Panel.

Detector R&D Roadmap: General Strategic Recommendations

GSR 5 - Distributed R&D activities with centralised facilities

Establish in the relevant R&D areas a distributed yet connected and supportive tier-ed system for R&D efforts across Europe. Keeping in mind the growing complexity, the specialisation required, the learning curve and the increased cost, consider more focused investment for those themes where leverage can be reached through centralisation at large institutions, while addressing the challenge that distributed resources remain accessible to researchers across Europe and through them also be available to help provide enhanced training opportunities.

GSR 6 - Establish long-term strategic funding programmes

Establish, additional to short-term funding programmes for the early proof of principle phase of R&D, also **long-term strategic funding programmes to sustain both research and development of the multi-decade DRDTs** in order for the technology to mature and to be able to deliver the experimental requirements. Beyond capital investments of single funding agencies, international collaboration and support at the EU level should be established. In general, the cost for R&D has increased, which further strengthens the vital need to make concerted investments.

GSR 7 – “Blue-sky” R&D

It is essential that **adequate resources be provided to support more speculative R&D** which can be riskier in terms of immediate benefits but can bring significant and potentially transformational returns if successful both to particle physics: unlocking new physics may only be possible by unlocking novel technologies in instrumentation, and to society. Innovative instrumentation research is one of the defining characteristics of the field of particle physics. “Blue-sky” developments in particle physics have often been of broader application and had immense societal benefit. Examples include: the development of the World Wide Web, Magnetic Resonance Imaging, Positron Emission Tomography and X-ray imaging for photon science.

Detector R&D Roadmap: General Strategic Recommendations

GSR 8 - Attract, nurture, recognise and sustain the careers of R&D experts

Innovation in instrumentation is essential to make progress in particle physics, and R&D experts are essential for innovation. It is recommended that ECFA, with the involvement and support of its Detector R&D Panel, continues the study of **recognition with a view to consolidate the route to an adequate number of positions with a sustained career in instrumentation R&D** to realise the strategic aspirations expressed in the EPPSU. It is suggested that ECFA should explore mechanisms to develop concrete proposals in this area and to find mechanisms to follow up on these in terms of their implementation. Consideration needs to be given to creating sufficiently attractive remuneration packages to retain those with key skills which typically command much higher salaries outside academic research. It should be emphasised that, in parallel, society benefits from the training particle physics provides because the knowledge and skills acquired are in high demand by industries in high-technology economies.

GSR 9 - Industrial partnerships

It is recommended to **identify promising areas for close collaboration between academic and industrial partners**, to create international frameworks for exchange on academic and industrial trends, drivers and needs, and to establish strategic and resources-loaded cooperation schemes on a European scale to intensify the collaboration with industry, in particular for developments in solid state sensors and micro-electronics.

GSR 10 – Open Science

It is recommended that the concept of **Open Science be explicitly supported in the context of instrumentation**, taking account of the constraints of commercial confidentiality where these apply due to partnerships with industry. Specifically, for publicly-funded research the default, wherever possible, should be open access publication of results and it is proposed that the Sponsoring Consortium for Open Access Publishing in Particle Physics (SCOAP³) should explore ensuring similar access is available to instrumentation journals (including for conference proceedings) as to other particle physics publications.
