

Goals

Sorry, I cannot attend because I am trapped in a review of a medical facility

The key workshop goals are to

- Identify the work more clearly and start distributing it
 - and who is going to do it
 - Remember report by the end of 2025 requires
 - theoretical studies to be completed before
 - experimental studies can still inject results in 2026
 - Important to distinguish between
 - essential work that absolutely must be done
 - important work that should be done
 - do not forget that we commit to the essential work
- Start forming the formal collaboration

Comments

Expression of potential interest for certain contributions are very important

Clearly, hard for most to make commitments at this moment

Will discuss the EU proposal, which could inject additional resources

Will receive some guidance from the Panel on their view on priorities
