

Size of periphery – a first guess (GENUS area-report)

EOC FIFOs depth (width =24 bit)	TX FIFO depth (width = 32 bit)	Area (whole periphery)
16	64	2.5 mm <sup>2</sup>
32	128	4.1 mm <sup>2</sup>

~ +5% needed for easier PnR (no ungrouping + pin constraints)
