

Discussion Session

- **First things first -> MANY THANKS**

- Two main deliverables of the workshop
 - status summary (PBC pre-study, physics workshops, a lot of work across teams)
 - -> **clarify if/how we go into a feasibility study**

- **Related key 'questions'**

- i. is there a sufficiently strong physics case (and related push from present/future collaborations)
- ii. do we know and can we meet (at least theoretically) the beam and respective parameter requirements
- iii. what technical R&D would be required to get there and what are the next steps

-> Session chairs and Silvia have prepared a few slides collecting some online feedback/conclusions to animate and guide us through the discussion session
