# The new Fast TapeStation at Isolde

Isolde Workshop

**Tim Giles** 

### Why a new FTS?

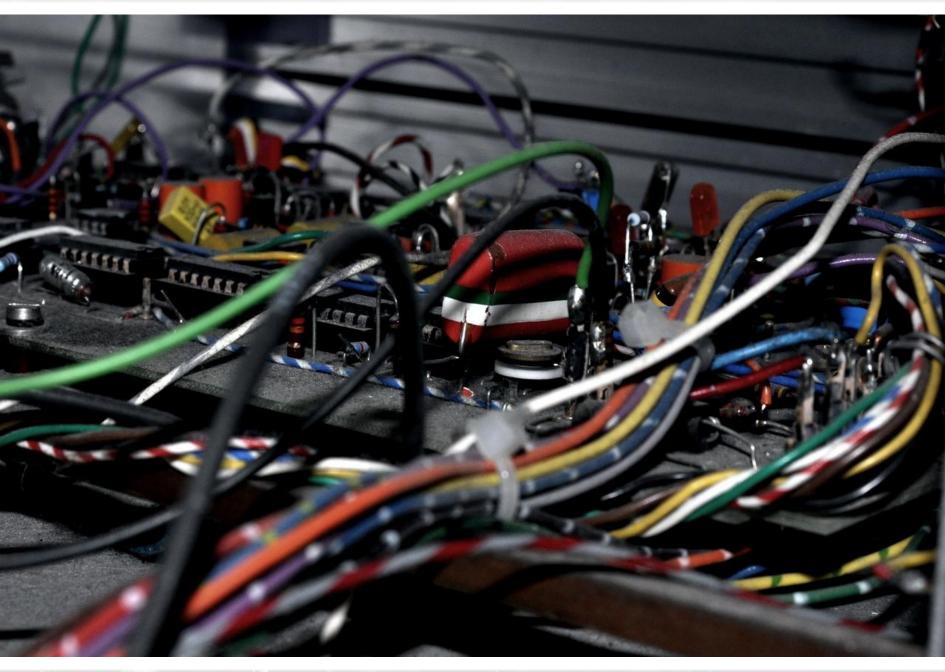

- Electronics & hardware of old tapestation unmaintainable
- → New tapestation designed and built at IReS, Strasbourg
- ➡ Faster tape transport : 200 ms vs 1000 ms 232 isotopes in the range 250 - 1000 ms 186 isotopes in the range 50 - 250 ms
- → New feature : in-beam measurement

104 isotopes in the range 10 - 50 ms (only works for isotopes without long-lived daughters)

Lim Giles

December 2010

### Measure

# ·Speed Limit

Isolde Workshop

200ms transport time: Maximum speed constrained by inertia of tape-bobbins, and tension of pinch-roller

December 2010

- Tape-overshoot on decelleration

Lim Giles

- Pinch-roller opens during acceleration
- Tape tension to be taken into consideration

# Yield Analysis

atoms/s

Giles

Read data-points from tapestation file

Find isotope decay chain

$$^{n}X \xrightarrow{n-4} \gamma \xrightarrow{n-4} \beta Z$$

Calculate decay curve

Make initial guess at release-curve parameters

Calculate modelled counts for each data point "fit model to data" resists problems with long collection times

Minimise average error-per-point "robust" fit, in units of std. error

"Simplex" n-dimensional optimiser

Common-sense check eg.  $t_{f2} > t_{half}$ ; delete outlying points Release curve parameters:

time

 $n_0$ 

t<sub>r</sub>

t<sub>f1</sub>

 $t_{f2}$ 

r

yield [atoms / uC] fast : slow yield ratio rise-time [s] fast fall-time [s] slow fall-time [s]

December 2010

### Software Demo

### Isolde Workshop

### Tim Giles

### Example Results: Yield's

Fall-time (fast) = 0.064 [s]

Rise-time = 0.002 [s]

(warning: t-fall > t-half) Fall-time (slow) = 5.226 [s]

Fast yield = 2.49e+003 [at/uC] (32.1 %) Slow yield = 5.28e+003 [at/uC] (67.9 %)

Total yield = 7.77e+003 [at/uC]

counts

counts

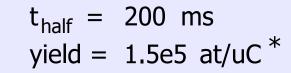

30Na yield

 $^{30}$ Na $\rightarrow$ <sup>30</sup>Mg t<sub>half</sub> = 48 $\rightarrow$ 335 ms yield = 2.5e3 at/uC

> t<sub>half</sub> = 365 ms yield = 1.1e3 at/uC

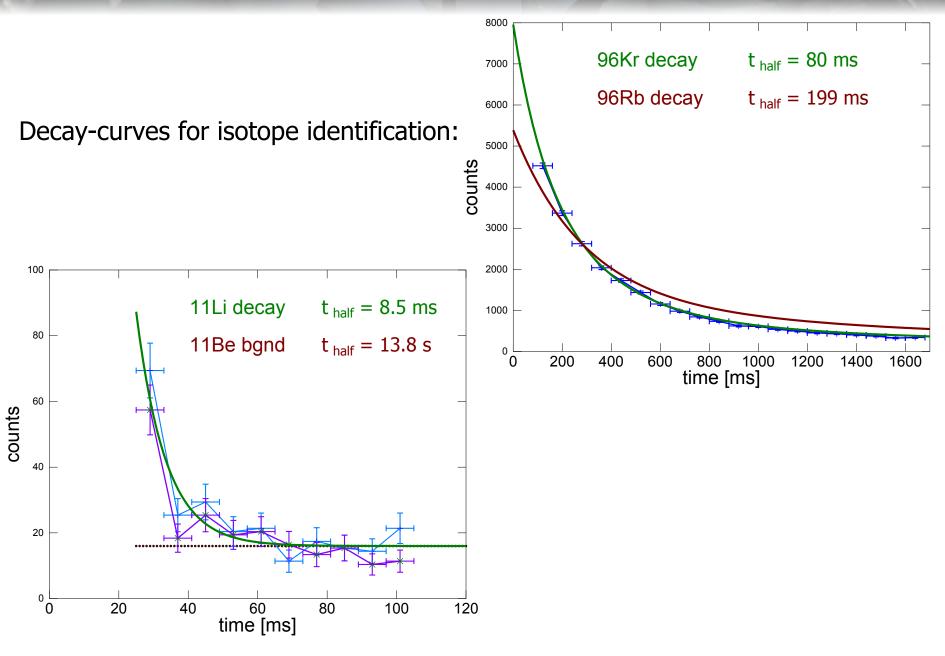

<sup>94</sup>Kr

 $^{51}$ K

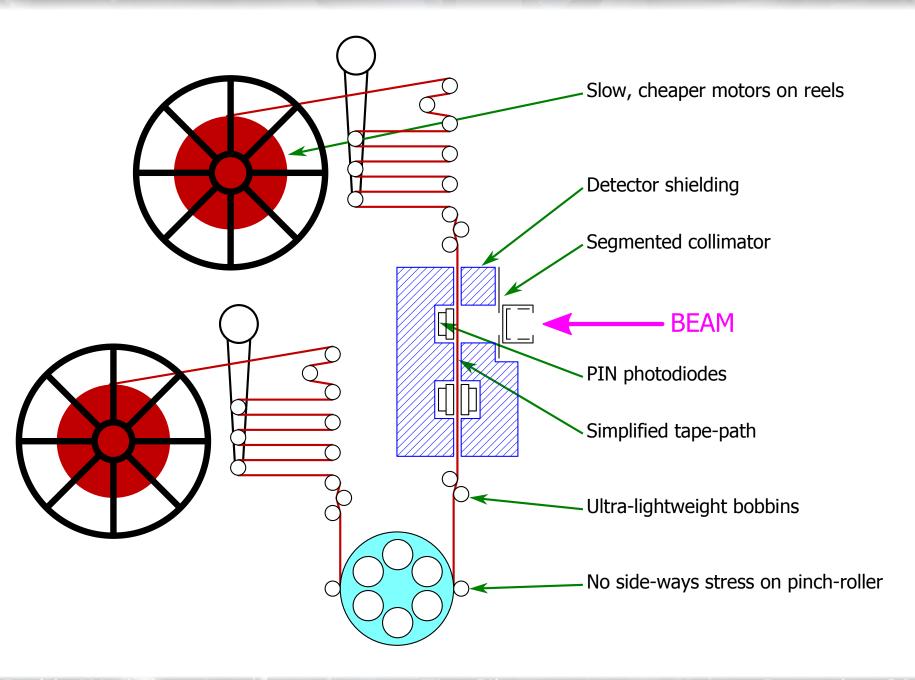

### In-beam measurements

l im Giles

Isolde Workshop

### A Future FTS Design

### Conclusion

- $\bigstar$  Reliability testing is vital
- ★ Decay curves: Software upgrades in progress
- **Faster counters:** New counters planned
- Installation in CA0
- Rapid yield analysis is essential
