

Do we understand everything about MP system response?

Wednesday 8 December 2010 14:00 (15 minutes)

The presentation will give a brief overview on the performance of the machine protection system during the 2010 run with an emphasis on highlighting suspicious events which still need to be fully understood. Improvements and mitigations of potential holes in the protection systems will be discussed along with their impact on the 2011 run. A summary of the currently available tools and necessary improvements for the assessment of beam dump events will conclude the presentation.

Presenter: ZERLAUTH, M.

Session Classification: Session 4: Machine Protection systems
