Radiation Hardness of Carbonated CNM-IMB LGAD samples

We revisit the radiation hardness of Carbonated CNM LGAD detectors (50 active thickness, run 10478) irradiated with PS protons up to $10^{15} n_{eq}/cm^2$. The study comprises electrical characterization of the gain layer doping removal, charge collection and timing with radioactive source.

Primary authors: NAVARRETE RAMOS, Efren (Universidad de Cantabria and CSIC (ES)); CURRAS RIVERA, Esteban (CERN); VILA ALVAREZ, Ivan (Instituto de Física de Cantabria (CSIC-UC)); FERNANDEZ GARCIA, Marcos (Universidad de Cantabria and CSIC (ES)); MOLL, Michael (CERN)

Presenter: FERNANDEZ GARCIA, Marcos (Universidad de Cantabria and CSIC (ES))

Session Classification: LGAD - Low Gain Avalanche Diodes
