

Science Mesh for EFSS Providers

Ron Trompert

Science Mesh workshop January 26th 2022

- * What is the Science Mesh?
- * Architecture
- * Authentication and Authorisation
 - Invitation workflow
- Monitoring and usage metrics
- Operational procedures
- **★ Governance Structure**
- * Security
- Nore information ★
 - * How to join

Science Mesh

* What is the Science Mesh?

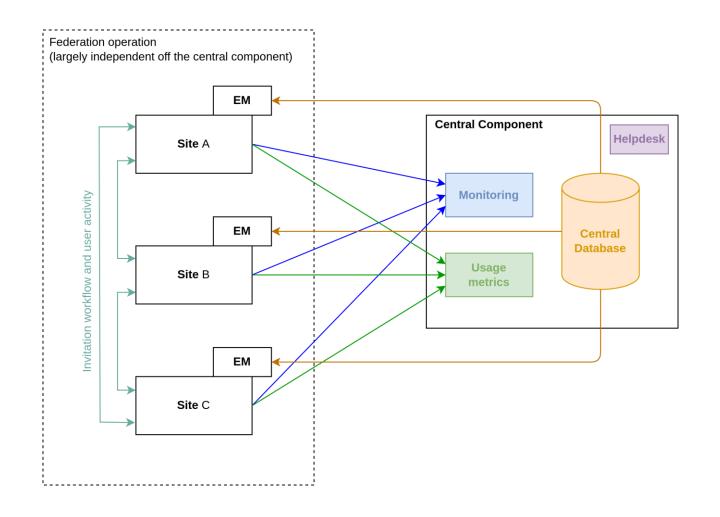

- * A community of sites running Enterprise File Sync-and-Share Services (EFSS)
- * Sites are autonomous but bound together by:
 - Protocols
 - Procedures
 - * Policies
- * Sites providing collaboration services allowing their existing users to share data and applications not only within their own service but also with users from other EFSS sites
- Light-weight by design

- * Central component
 - * Availability monitoring
 - Usage metrics
 - Central database with mesh topology
 - Helpdesk for sites
- * Executive Module (EM)
 - * Service discovery interface
 - ♥ Where Are You From (WAYF)
 - * Enforce local sharing policies
 - Establish trust between users and sharing resources
- * Sites can run autonomously

Science Mesh workshop, January 26th 2022

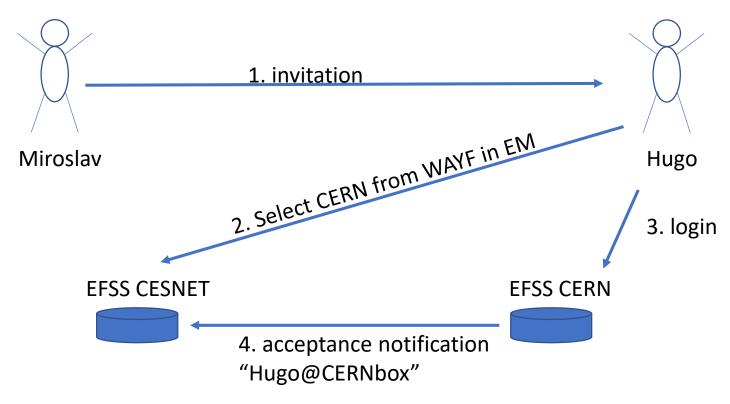

Current Science Mesh Testbed

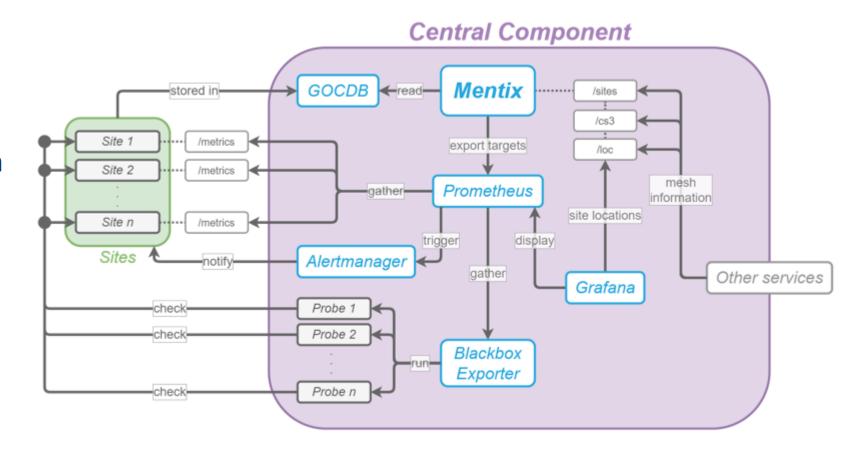

- * Federated AAI can be used but is not needed. Your own favorite AAI system is fine too.
- * Building trust based on an invitation workflow
 - Collecting the name of the target EFSS as well as the target users' identity
- ★ See Milan's talk

Monitoring and usage metrics

- * GOCdb
 - ★ Central database
- * Prometheus
 - Collects information from various sources
- **★ Blackbox exporter**
 - * Runs probes to test services
- * Alert manager
 - Informs sites about issues

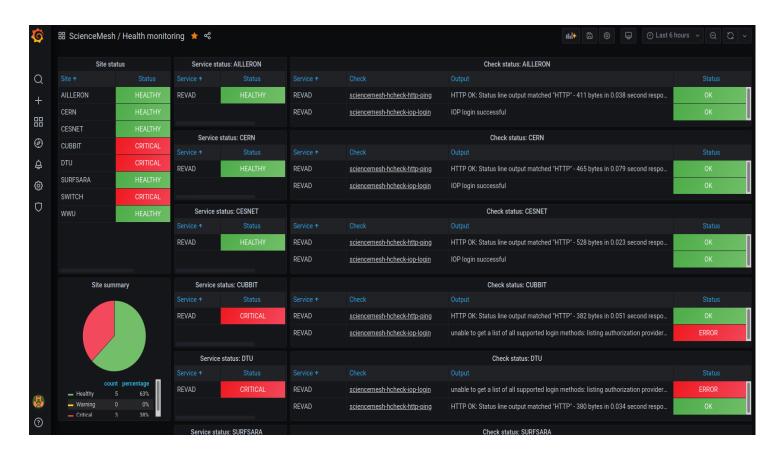

Monitoring and usage metrics

- * Grafana dashboard displaying the Science Mesh sites
- * Metrics
 - * Number of users
 - * Amount of data stored
 - #

Monitoring and usage metrics

- Internal monitoring tool
- * Shows the latest results of availability tests
- * Tests run periodically to check the proper functioning of the Science Mesh

Operational procedures

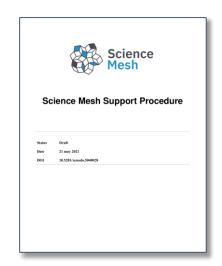

Operational procedures

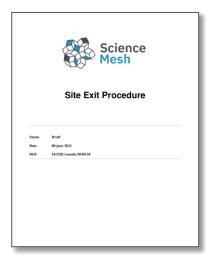

- Describing steps undertaken for admission, leaving or suspension from the Science Mesh
- Site Admission Procedure
 - * Technical requirements
- Note: No
 - Consequences of leaving the Science Mesh
- Site Suspension Procedure
 - Consequences of being suspended
 - Lifting suspension
 - Permanent disqualification

Support

- Central Helpdesk only for sites for scalability reasons
- Users go to the helpdesk of their own EFSS
- Community support though informal communication channels

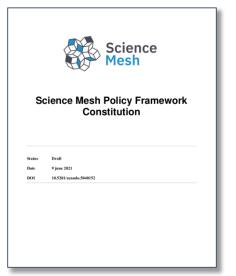

Governance

* Constitution

- Governance bodies
 - Science Mesh Steering Group
 - Representatives of each site
 - Decides on policy changes by majority vote
 - Science Mesh Executive Board
 - Representatives of Sponsors of the Central Services
 - Ratifies decisions by Science Mesh Steering Group
 - Note: No
 - Operations
 - Support
 - Reviewing and approving memberships of new sites
 - **4**
- Administrative requirements for joining the Science Mesh
- Declaration
 - Needs to be signed by the site that wants to join the Science Mesh
 - * Responsibilities
 - Provide information and keeping it up to date
 - Having "Terms and Conditions" and a "Privacy Policy" in place
 - *****

- * Light weight central security overhead
- Lean heavily on local security expertise
- * Central security procedures based on the <u>AARC Policy Development Kit</u>
 - * Incident Report Procedure
 - * Service Operations Security Policies
- * Pentesting

* Still in a draft state:

- ***** Governance
- Operational procedures
- * Helpdesk
- * Security

* Your input is very welcome

working on it...

How to join Science Mesh

The steps to join the Science Mesh

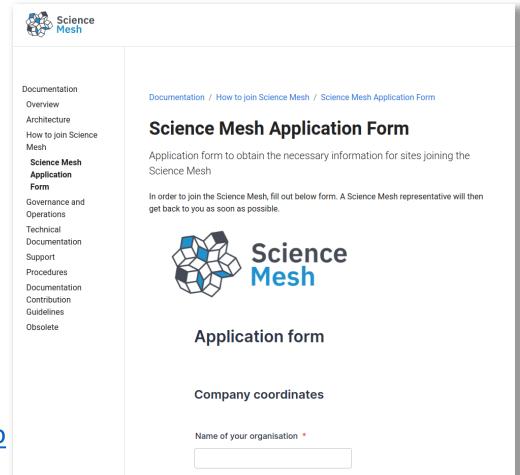

To join the Science Mesh, there are several formal and technical steps. If you encounter any problems during this process or have some general questions, feel free to contact the Science Mesh administration.

- In order to join the Science Mesh, you as the operator of a site are expected to run one of supported EFSS (sync and share systems). FIXME link
- 2. Get into contact with a Science Mesh representative by using this form
- After that, a Science Mesh representative will get back to you, detailing the next steps to get your site into the mesh
- 4. While the system may support all necessary protocols (CS3 APIs, OCM) by itself (or you can run any protocol-compatible implementation to your taste), it is quite probable that you will need to install the Reva IOP (interoperability platform) acting as an Executive Module of your EFSS instance in the Science Mesh.
- 5. Your site needs to be registered in the Central Database where metadata about your site and applications running there are stored. A Science Mesh representative will create initial entries for your site, but from there on, it will be your responsibility to keep these entries up to date.

More information

- * How to join
 - Necessary steps
 - Need a supported EFSS
 - Nextcloud, Owncloud, Seafile (under development)
 - Get in touch with us by filling out a form
 - Install the Inter Operability Platform (REVA)
 - Register in the central database
 - Setup monitoring and metrics collection
 - * Formal paperwork (can be skipped for now since things are not finalized yet)
- * Contact us:
 - * Email address and helpdesk are in preparation but for now you can reach us at gitter: https://gitter.im/sciencemesh/community
- * Keep an eye on https://development.sciencemesh.io in order to keep yourself posted on our progress
