

TCLPX – TCTPXH – TCSPM

Bake out systems

WP5.2 Technical meeting

L. Gentini

TCLPX HEATING JACKETS

Body jackets

Pump jackets

Bellow jackets

- The jackets must be installed on the collimator before to put the collimator on its support.
- 7 electrical lines are used on the hypertac.

TCLPX HEATING JACKETS

BODY JACKETS ASSEMBLY - LHCTCLPX_T0001

- 25 mm thickness.
- Just one single jacket for the bottom side and the two lateral sides.
- For space matters on jacket has just one electrical connector.

ION PUMP JACKETS - LHCVEJEC0006

- 25 mm thickness.
- The two jackets of the ion pumps are connected in series to reduce the number of electrical connections on the hypertac.

BELLOW JACKETS - LHCTCLPX_T0019

- 10 mm thickness.

TCTPXH HEATING JACKETS

Body jackets

Pump jackets

- The jackets must be installed on the collimator before put the collimator on its support.
- 7 electrical lines are used on the hypertac.

Bellow jackets

TCTPXH HEATING JACKETS

BODY JACKETS ASSEMBLY - LHCTCLPX_T0011

- 25 mm thickness.
- Just one single jacket for the bottom side and the two lateral sides.
- For space matters on jacket has just one electrical connector.

ION PUMP JACKETS - LHCVEJEC0006

- 25 mm thickness.
- The two jackets of the ion pumps are connected in series to reduce the number of electrical connections on the hypertac. (Same of TCLPX)

BELLOW JACKETS - LHCTCLPX_T0019

- 10 mm thickness.
- Same design of TCLPX

TCTPXV HEATING JACKETS

- The jackets must be installed on the collimator before put the collimator on its support.
- 6 electrical lines are used on the hypertac.

TCTPXV HEATING JACKETS

BODY JACKETS ASSEMBLY - LHCTCTPX_T0001

- 25 mm thickness.
- Two jackets for the bottom side and the two lateral sides.

2nd BEAM JACKETS – LHCTCTPXV_0104

- 20 mm thickness.

EXTREMITY JACKET
NECESSARY ?

TCSPM BAKE OUT SYSTEM IMPROVEMENT 1

BODY JACKETS ASSEMBLY – LHCTCSPM0105

- 6 electrical lines are used on the hypertac.

DESIGN IMPROVEMENT

A lot of eating is lost in the pick-up area:

- There is not heating on the tank between the pick-up
- There is not heating on the pick-up flanges.

SOLUTION 1

- Remove the aperture between the pick-up.
- Close the gap between the pick-up (20 mm of jacket).

This solution does not change the design

SOLUTION 1

SOLUTION 2

SOLUTION 2

- Remove the aperture between the pick-up.
- Put a collar on the lateral jacket to heat also the pick-up flanges.

For this solution, the pick-up of the cartridge must be moved by 10 mm.

TCSPM BAKE OUT SYSTEM IMPROVEMENT 2

MKT CHAIN SYSTEM

By conduction, the extremities of the tanks are cooled down.

A solution could be to add two thermal insulating plates between the MKT system and the tank (2 or 3 mm) as we have done on the IR collimators.

To do not decrease the stroke of the MKT, the space must be obtained on the thickness of the MKT plate.
The MKT system must be slightly modified.

Thank you for your attention

HYPERTAC – BAKE OUT CONNECTOR

Case Name	Patin Size			Conimotor Size			Comments	Distribution name
