

Plans for LHC ion operation in Run 3 (20' + 10')

Wednesday, November 24, 2021 4:00 PM (30 minutes)

This talk gives an overview of the foreseen running periods for Pb-Pb and p-Pb operation in Run 3, as well as the foreseen machine configuration and expected beam parameters. The projected luminosity performance will be presented, as well as possible paths for improvement. In addition, the tentative plans for the LHC pilot run with oxygen beams will be discussed.

Presenter: BRUCE, Roderik (CERN)

Session Classification: Session 3
