

# Automated Backup and Recovery for the Database on Demand service using EOS

*Thursday, October 28, 2021 11:20 AM (25 minutes)*

Last year we deployed a new automated backup and recovery setup for the Database on Demand Service at CERN. This setup comprises of 2 services-

1. Backup service - Stores encrypted and zipped backups of all DBOD production instances to EOS storage.
2. Restore service - Continuously restores and tests connectivity of snapshots of all production instances.

This presentation aims to shed light on the structure and working of this setup.

## Desired slot length

## Speaker release

Yes
