

LoRaWAN at CERN vs pandemics: 1:0

Wednesday, 27 October 2021 11:35 (25 minutes)

To counteract the spread of the COVID-19 virus as much as possible, a device has been developed at CERN, the Proximeter, which sends information about contact tracing via an IoT network. In this respect, some hurdles had to be overcome in terms of data protection and compromises concerning the network and the actual protocol.
