

DESY's user registry

Thursday 28 October 2021 19:15 (25 minutes)

DESY's current user registry is about to retire. During its use boundary conditions have shifted, the user groups have become more heterogeneous and in addition to collaborations with stable memberships the photon science community brought a higher rate of fluctuation of IT users. The successor incorporates those changes and delivers functionality based on Oracle's database (database, APEX, ORDS).

Desired slot length
