- 2nd CernVM workshop outside CERN
  - Very productive having all the experts in one place
  - Very helpful for us to get a fresh look onto what's going on in cvmfs-land
  - Workshop is a good opportunity to get things done

- Some (yet undigested) themes
  - Client performance (ALICE, LHCb): new or more stressful access patterns
    - Proxy sharding, symlink caching, HTTP line optimization
  - Multiple publishers & gateway
    - Gaining traction for nightly build / integration build boxes
    - Scheduling of garbage collection is an issue
    - Key management should be addressed (outsourced)
    - More robust link between publisher and gateway
  - Container integration
    - Release & deploy containerd snapshotter at CERN
    - Helm chart / "official" plugin for client/clusters on k8s
    - Mid-term: aim for upstream integration instead of plugins

  Huge Thanks to NIKHEF for making this such a pleasant experience!
