Global fits of s-channel simplified models for dark matter with GAMBIT

Thursday, 11 August 2022 16:10 (20 minutes)

Dark matter candidates can arise from a wide range of extensions to the Standard Model. Simplified models with a small number of new particles allow for the optimisation and interpretation of dark matter and collider experiments, without the need for a UV-complete theory. In this talk, I will discuss the results from a recent GAMBIT study of global constraints on vector-mediated simplified dark matter models. I will cover several models with differing spins of the dark matter candidate. Along with these constraints, I will provide new unitarity bounds from the self-scattering of vector dark matter and discuss their effect on collider constraints.

Collaboration name

GAMBIT

Primary author: CHANG, Christopher

Co-authors: SCOTT, Pat (The University of Queensland); GONZALO, Tomas (RWTH Aachen); KAHLHOEFER, Felix (RWTH Aachen); WHITE, Martin John (University of Adelaide (AU)); KVELLESTAD, Anders (University of Oslo)

Presenter: CHANG, Christopher

Session Classification: Dark Matter

Track Classification: Dark Matter
