Unique Properties of the 3rd Group of Cosmic Rays: Results from the Alpha Magnetic Spectrometer

Tuesday 9 August 2022 16:10 (20 minutes)

Cosmic Nitrogen, Sodium, and Aluminum nuclei are a combination of primaries, produced at cosmic-ray sources, and secondaries resulting from collisions of heavier primary cosmic rays with the interstellar medium. We present high statistics measurements of the N, Na and Al rigidity spectra. We discuss the properties and composition of their spectra and present a novel model-independent determination of their abundance ratios at the source. The systematic comparison with the latest GALPROP cosmic ray model is presented.

Collaboration name

AMS-02 collaboration

Primary author: Dr FORMATO, Valerio (INFN - Sezione di Roma Tor Vergata)

Presenter: Dr FORMATO, Valerio (INFN - Sezione di Roma Tor Vergata)

Session Classification: Cosmic Rays

Track Classification: Cosmic Rays
