Cosmic-ray Neutrino Boosted Dark Matter (ν BDM)

Tuesday, 9 August 2022 15:00 (20 minutes)

We propose a novel mechanism of boosting dark matter by cosmic-ray neutrinos. The new mechanism is so significant that the arriving flux of cosmic-ray neutrino boosted dark matter (ν BDM) lighter than $O(1)$ MeV on Earth substantially larger than the one of the cosmic-ray electron boosted dark matter. Therefore, ν BDM can dominantly contribute in direct detection experiments. We derive conservative but still stringent bounds and future sensitivity limits for ν BDM from advanced underground dark matter and neutrino experiments such as XENON1T/nT, LZ, Borexino, and JUNO.

Collaboration name

Primary author: Prof. PARK, Jong-Chul (Chungnam National University)

Co-authors: Mr JHO, Yongsoo (Yonsei University); Prof. PARK, Seong Chan (Yonsei University); Prof. TSENG, Po-Yen (National Tsing Hua University)

Presenter: Prof. PARK, Jong-Chul (Chungnam National University)

Session Classification: Dark Matter

Track Classification: Dark Matter
