Connected vacua in string models

Tuesday 28 June 2022 16:00 (20 minutes)

Global consistency condition of string theory plays important role in obtaining vacua of string theory. It does not only restrict possible vacua, but also suggest that many vacua are connected, if the systems are protected by SUSY. We visit some examples in heterotic orbifold and F-theory, focusing on the small instanton transitions and their duals.
