

A few pieces of News from IT/PES

- VOBox SLS Review
- New OS Update procedure
- Enabling netlog
- Remote syslog service

- Service Level Status (<http://sls.cern.ch/sls/>)
 - Display service availability
 - In a accurate manner (no hardcode “green”)
- Some services on VOBoxes:
 - are not displayed
 - are obsolete (see example)
 - CERN special facilities replaced by per-service ones
- Up to each VOC to review it:
 - SLS Manual for service managers
 - <https://twiki/twiki/bin/view/FIOgroup/SLSManualForSM>

CERN Special Facilities dedicated to VOs/experiments

21 Sep 2010 Tue 10:42:01

Special Facilities

availability:

(more)

percentage: 99%

status: **affected**

this service consists of:

- Special Facility (ALICE)
- Special Facility (ARDA)
- Special Facility (ATLAS)
- Special Facility (CMS)
- Special Facility (GRID)
- Special Facility (LHCb)

availability in the last 24 hours (more):

Additional information

full name: **CERN Special Facilities dedicated to VOs/experiments**

short name: Special Facilities

group: IT-FIO

site: CERN

email: Helpdesk@cern.ch

Availability update

last update: 10:32:06, 21 Sep 2010
(10 minutes ago)

expires after: 60 minutes

CERN Special Facility (atlas)

21 Sep 2010 Tue 10:47:41

Service information

full name: **CERN Special Facility (atlas)**
short name: Special Facility (ATLAS)
group: IT/FIO
site: CERN

email: Helpdesk@cern.ch

manager: **Ricardo Salgueiro Domingues Da Silva**

Part of (subservice of):

- Special Facilities
- Services for ATLAS

Subservices

none / not declared

Clusters, subclusters and nodes

none / not declared

Depends on

this service uses:

- Kerberos

Depended on by

none / not declared

Service availability [\(more\)](#)

availability:

percentage: 99%

availability info: This service is partially available: 1 out of 174 tested nodes are not reachable. 1 out of 174 tested nodes do not provide monitoring information.

New OS Update Procedure

- Agreed in ELFms meeting; Announced in CCSR
 - Emergency Updates (OS snapshots provided)
 - Responsibility where it belongs (no unknown intervention)
- VOC defines policy for cluster OS update:
 - OS update frequency needs vary
 - Uses OS time-stamp
 - prod/cluster/<CLUSTERNAME>/osdateversion.tpl
 - variable ELFMS_OSDATE ?= “20100916”;
 - New ELFMS_OSDATE every Saturday and in special occasions
 - More at: <https://twiki/twiki/bin/view/ELFms/OsUpdates>

Enabling netlog2

- SLC5 Kernel module.
- logs the opening and closing of network ports by process and user id: forensics.
- Recipe to enable it.
 - 1) Include file.
 - 2) Disable exception.
 - 3) Reboot or run commands.
 - 4) Check metric.
 - 5) Enable exception.
 - <https://twiki/twiki/bin/view/FIOgroup/FsVOBoxVOCCConf#Netlog2>

Remote syslog service

- Central Server gathering all syslogs
 - Only accessible by security team
 - For forensics purposes
- Easy recipe:
 - `include { 'components/syslog/remote_headnode' };`
 - `spma_wrapper.sh + ncm_wrapper.sh syslog`
