

# Prospects for single- and di-Higgs measurements at the HL-LHC with the ATLAS and CMS experiments

*Wednesday, November 9, 2022 3:15 PM (15 minutes)*

The large dataset of about  $3 \text{ ab}^{-1}$  that will be collected at the High Luminosity LHC (HL-LHC) will be used to measure Higgs boson processes in detail. Studies based on current analyses have been carried out to understand the expected precision and limitations of these measurements. The large dataset will also allow for better sensitivity to di-Higgs processes and the Higgs boson self coupling. This talk will present the prospects for Higgs and di-Higgs results with the ATLAS detector at the HL-LHC.

### Type of talk

Future prospects

**Presenter:** VERNIERI, Caterina (SLAC National Accelerator Laboratory (US))

**Session Classification:** Wednesday Session B

**Track Classification:** Physics Topics: Future Colliders
