
Valuable lessons and plans

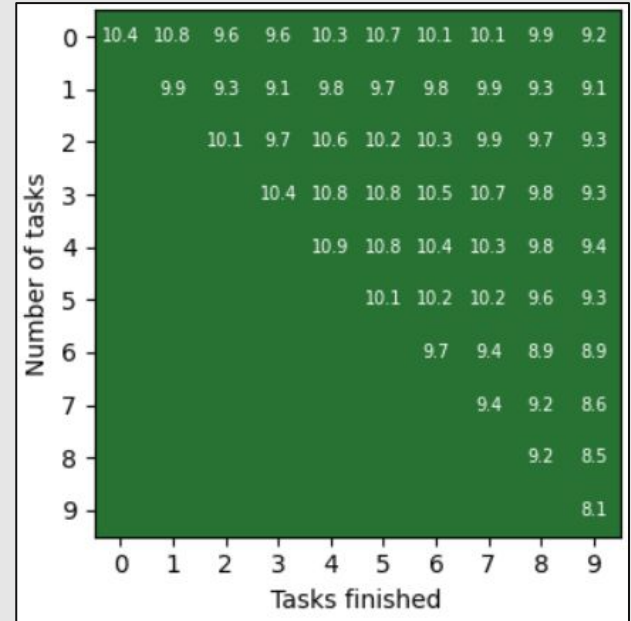

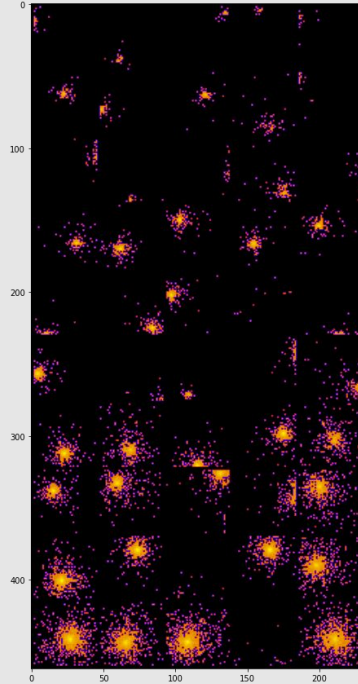

- We can recommend ONNX as an integration tool
- Software we develop is very ZDC specific

- We might want to think about how we want to retrain model with additional data - we don't want to do it from scratch every time we have some changes
- Preliminary results with our continual learning method are promising

Continual learning - preliminary results

Training with
continuously increasing
amount of data

Without the assumption
of i.i.d. data

Wasserstein distance on all channels with
continuously increased amount of data
