

# Very-high-energy gamma rays from gamma-ray bursts

*Wednesday 12 October 2022 11:30 (30 minutes)*

The study of gamma-ray bursts (GRBs) is often advanced by detections of individual spectacular events. In the last few years, very-high-energy (VHE,  $>100$  GeV) emission from GRBs has been detected for the first time, allowing us to build a multiwavelength picture of GRBs that extends all the way up to TeV energies. In this talk, I will give an overview of the current state of VHE GRB detections, and the potential implications for the 'standard' model of GRB emission.

## **Track**

GRBs

**Primary author:** ZHU, Sylvia Jiechen

**Presenter:** ZHU, Sylvia Jiechen

**Session Classification:** Plenary 6
