Conclusions

- Obviously Basel-Geneva is very busy
 - Some lambdas can be brought in to CERN via Lyon (but at additional cost)
- Further investigations required in particular concerning:
 - Physical routing of Qwest USLHCNET lambda
 - Physical routing of GRIDKA-IN2P3 in Strasbourg/Kehl
 - Street level routing of GRIDKA-SARA (& GEANT2 fibre) near FFM airport
 - Physical routing of SARA-NDGF (Hamburg-Copenhagen)
 - Physical routing of COLT/VSNL USLHCNET lambda (VSNL N CLS-FFM)
 - Physical routing of GRIDKA-IN2P3 in Paris area
- Firmer conclusions will be drawn after these have been resolved
