ALICE

# EP-DT

# contribution to ALICE

Massimo Angeletti

Yannick, Pieter, Philippe, Jaap, Gregory, Didier (DT-CO),  
Paolo (DT-TP), Petra (DT-DD), Giovanna (DT-DI), Corrado (DT-EO)

DSF QART and Bonding lab, Composite lab,  
Micropattern lab, Workshop 162, Magnet  
M&O, GasSystem M&O, Irradation Facilities.

# Outline

## Long Shutdown 2 Detector installation

MFT

ITS Outer Barrel

ITS Inner Barrel

## Long Shutdown 3

## R&D Inner Tracking System

# Inner detectors: MFT, ITS OB, ITS IB

ITS IB

MFT

IP

ITS OB

# Inner detectors: MFT, ITS OB, ITS IB

MFT Top inserted

## Dry insertion test

3D scan, metrology

MFT Bottom insertion

## Installation

MFT Top inserted

MFT Bottom insertion

# ITS2 Outer Barrel

OB bottom insertion

OB Top rotation

OB Top insertion

Dry insertion test

OB Bottom inserted

I/F verification

Minimum nominal gap 1.4mm

# ITS2 Outer Barrel

## Installation

OB in its final position

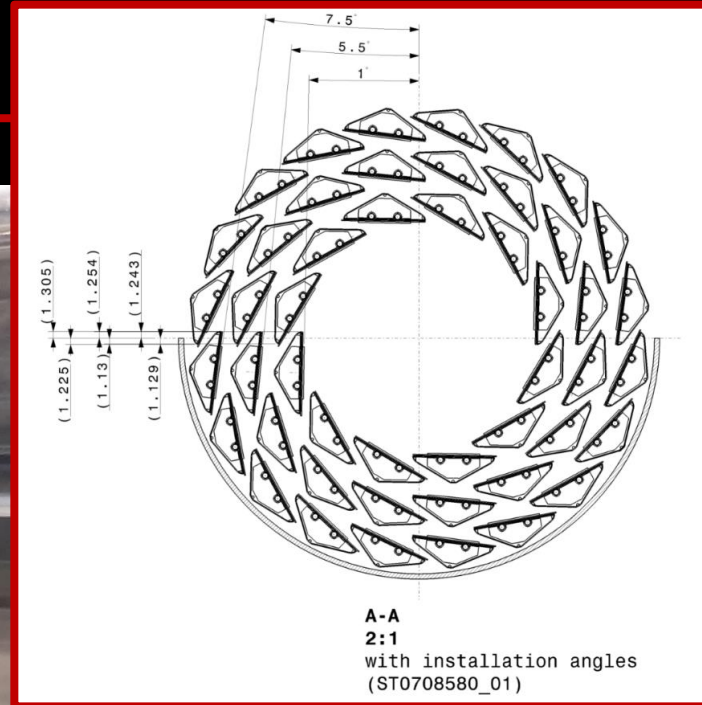

Closing the gap

# ITS2 Inner Barrel

Dry insertion test

## Inspection I/F verification

3D scan, metrology

# ITS2 Inner Barrel

IB bottom inserted

Installation

ITS IB

Tool >3.5m far away

Back side view

**EP-DT CONTRIBUTION TO ALICE: (ITS2 FOR RUN3)**  
*Detector design and construction and pre-commissioning (EP-DT-DD/TP/EO/CO).  
Development of the entire installation sequence around the beampipe. (EP-DT-EO/CO).  
Installation in ALICE of the two ITS OB H-barrels followed by the two ITS IB H-barrels*

## ITS2 safety system (ITS2S)

ALICE ITS Main Page

PLC Information

PLC\_1  
PLC\_2  
PLC\_3

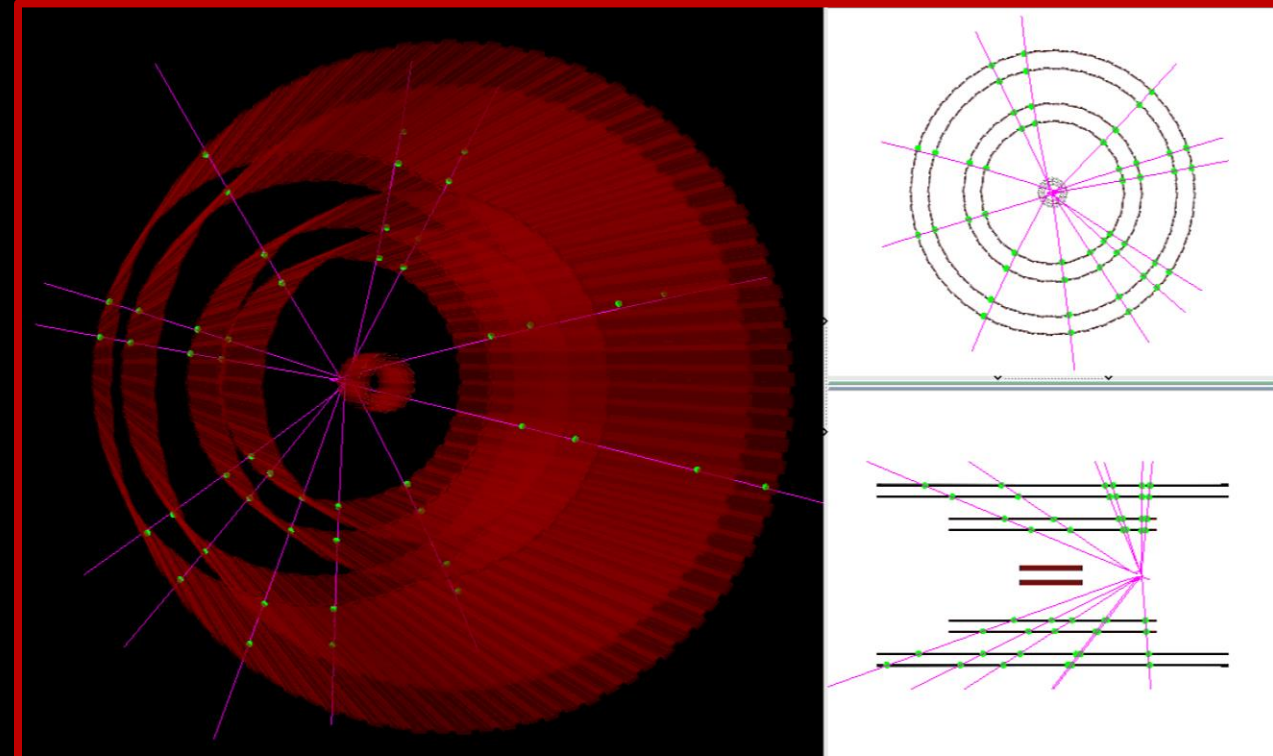

DI Status

Rail5, Box5  
Rail5, Box6

ITS2S main panel

## 1<sup>st</sup> Acquisition

First pp event reconstructed with ITS2

**EP-DT CONTRIBUTION TO ALICE: (ITS2 FOR RUN3)**

*Safety system for the new ALICE ITS protected against over temperatures (EP-DT-DI)*

# Inner Tracking System 3 (ITS3) – LS3

**R&D** Directions towards unprecedented vertex minimum layers materials

(unprecedented low material budget of 0.05%)

→ minimum material support and gas cooling

Carbon foam

→ Wire bonding at the edge side

→ Curved Silicon sensors

→ Chip stitching

12"

# Inner Tracking System 3 (ITS3) – LS3

Metrology assessment on the first prototype model

Baseline:  
Carbon foam material

**Support**

ERG Carbon  
@Duocel  
 $\rho = 0.06 \text{ kg/dm}^3$   
 $K = 0.033 \text{ W/m}\cdot\text{K}$

**Support & cooling**

Allcomp K9  
Standard Density  
 $\rho = 0.2\text{-}0.26 \text{ kg/dm}^3$   
 $K = >17 \text{ W/m}\cdot\text{K}$

# Inner Tracking System 3 (ITS3) – LS3

**NEXT:** wind tunnel thermal test of new dummy model with carbon foam radiators

Heat dissipation is non-uniform

L0 Matrix= 1W

L0 Periphery= 5.1W

Allcomp K9 standard density

**EP-DT CONTRIBUTION TO ALICE: (ITS3 FOR RUN4)**

*Development of the mechanics and cooling system of a novel vertex detector, the ITS3. (EP-DT-EO/CO, MPT, TFG lab)*

Thank you for your attention
