

## Flavour and dark matter in a hybrid seesaw/scotogenic model

*Thursday 30 June 2022 17:30 (15 minutes)*

I will present our recent work based on a hybrid Type-II seesaw/scotogenic model supplemented with a discrete flavour symmetry where CP is broken by the vacuum. Namely, we analyse compatibility with low-energy neutrino observables, study the charged lepton flavour violation implications and review the scalar and fermionic dark matter prospects of our framework.
