MINIBALL + T-REX

(Coulex + Transfer)

Thorsten Kröll (TU Darmstadt)

TECHNISCHE UNIVERSITÄT DARMSTADT

… essentially we will use the existing set-up already optimized for the conditions at REX-ISOLDE developed in the last 10 years!

Beam requirements

TECHNISCHE UNIVERSITÄT DARMSTADT

- **Slow extraction!!!**
  10^6 pps means up to 10^9 pps instantanous rate

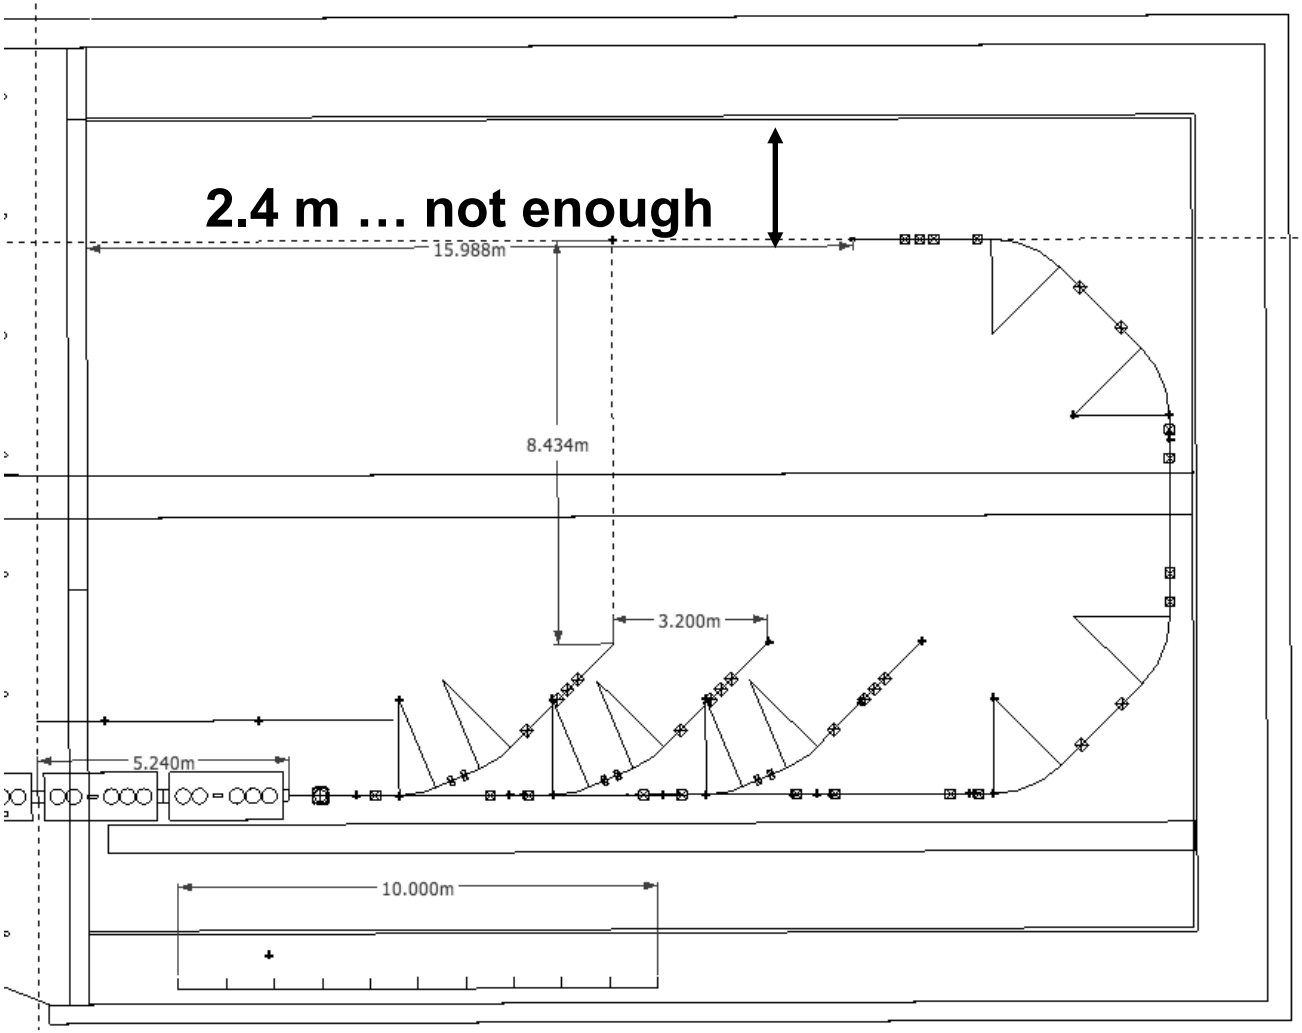
- **Beam spot size < 3 mm desirable**
  Determination of particle angles
  Doppler correction
  Deposited radioactivity in chamber

- **Beam purity (as good as possible, of course)**
  … depends on isotope
  improvements more than welcome!!!!

- **Energy resolution as at REX is ok**

Floor space

TECHNISCHE UNIVERSITÄT DARMSTADT



Floor space / ancillary detectors

TECHNISCHE UNIVERSITÄT DARMSTADT

MINIBALL: 7 m (width) x 10 m (last lense – beam dump)

Electronics/Control: 7 m x 9 m (5 racks, 2 cup boards, 3 tables)
needed 2 additional racks
new ancillaries: e-detection, plunger, beam dump

Max. distance MINIBALL/Electronics: 10 m

1. floor / platform ?

Preparing/Repair: 10 m x 4 m (4 tables, 5 cup boards)
needed additional 2 cup boards for ancillaries

Spectrometer / Separator … space needed
(Partial) alternative: fusion veto … operational (needs no extra space)
NO identification of beam impurities
