

Daily new confirmed COVID-19 cases & deaths per million people

7-day rolling average. Limited testing and challenges in the attribution of cause of death means the cases and deaths counts may not be accurate.

LINEAR LOG Uniform y-axis

Daily COVID-19 vaccine doses administered per 100 people

Number of daily doses administered (7-day rolling average), divided by the total population of the country. All doses, including boosters, are counted individually.

LINEAR LOG

Source: Official data collated by Our World in Data. For vaccines that require multiple doses, each individual dose is counted.

Share of the population fully vaccinated against COVID-19

Our World
in Data

Total number of people who received all doses prescribed by the vaccination protocol, divided by the total population of the country.

LINEAR LOG

Source: Official data collated by Our World in Data. Alternative definitions of a full vaccination, e.g. having been infected with SARS-CoV-2 and having 1 dose of a 2-dose protocol, are ignored to maximize comparability between countries.

COVID-19: Stringency Index

The stringency index is a composite measure based on nine response indicators including school closures, workplace closures, and travel bans, rescaled to a value from 0 to 100 (100 = strictest). If policies vary at the subnational level, the index shows the response level of the strictest subregion.
