1D Unfolding of distributions N_{ch}^{TS}

Purpose: To obtain a better estimate of the true distribution of the multiplicity of charged particles from the development of experimental distributions.

$N_{ch,true}^{TS}$: True multiplicity in the Transverse region.
 N_{acc}^{TS} : Multiplicity distribution of measured events in the Transverse region.
 $P(N_{acc}^{TS} | N_{ch,true}^{TS})$: Multiplicity response matrix.

2D Unfolding of p_T spectra

First: Apply the tracking efficiency and secondary particle contamination

Second:

$$\left(\text{Multiplicity response matrix, } P(N_{\text{acc}}^{\text{TS}} | N_{\text{ch,true}}^{\text{TS}}) \right) \times \left(\text{Weight of the number of measured particles} \right)$$

Weekly Report

☑ Run on GRID - improvement in the percentage of accepted jobs.

Jobs Overview		
State	Jobs	
	#	%
Done	210	61.4
Error_V	29	8.5
Error_E (TTL)	1	0.3
Error_E (mem)	66	19.3
Error_E (disk)	0	0.0
Error E_W	0	0.0
Other	36	10.5

Jobs Overview		
State	Jobs	
	#	%
Done	387	78.7
Error_V	29	11.4
Error_E (TTL)	4	0.6
Error_E (mem)	27	21.1
Error_E (disk)	0	0.0
Error E_W	1	0.0
Other	44	8.5

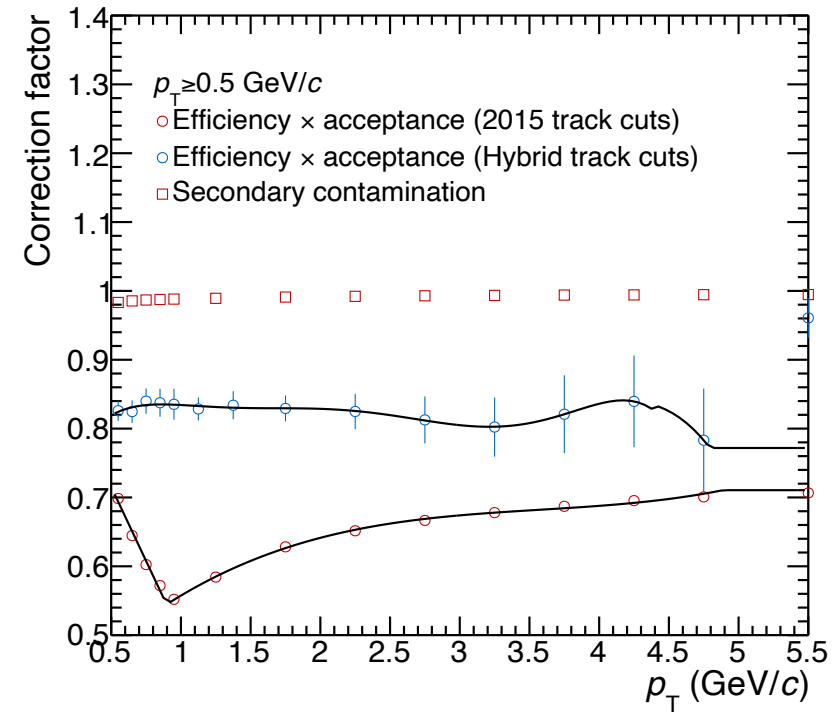

Response matrices and correction factor

Response matrix - 2015 track cuts

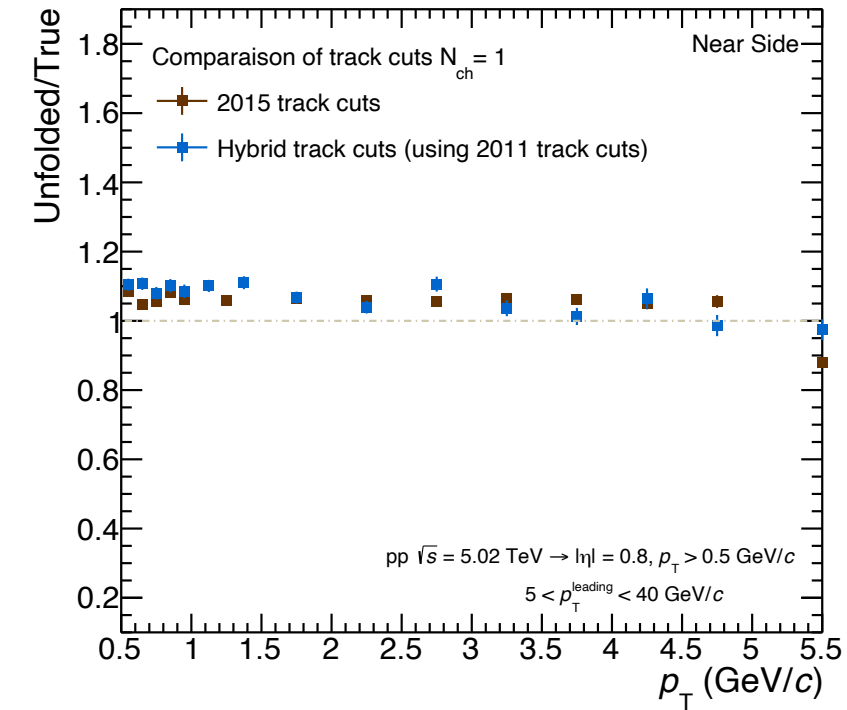

Response matrix - hybrid track cuts

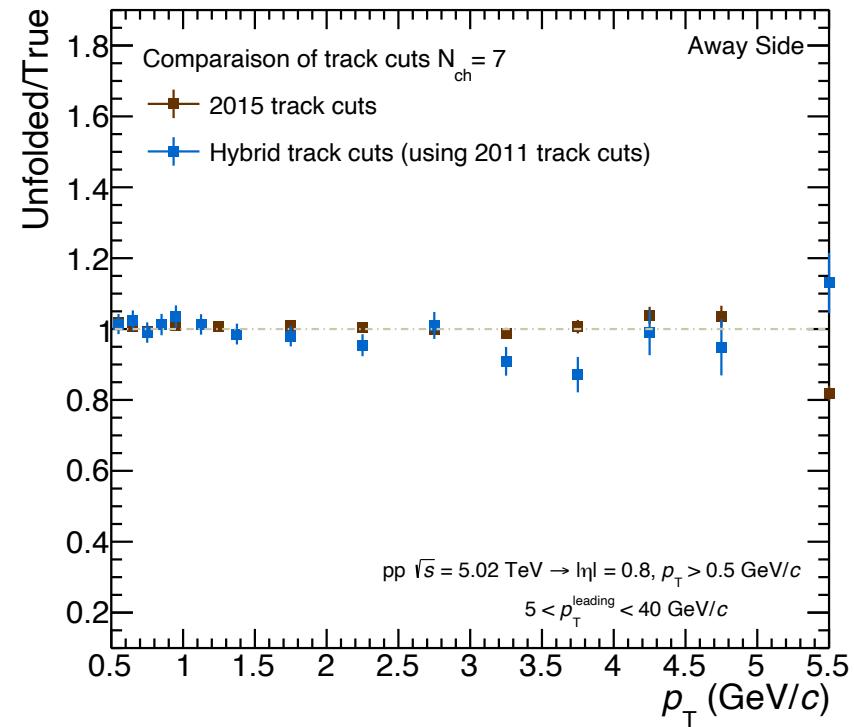

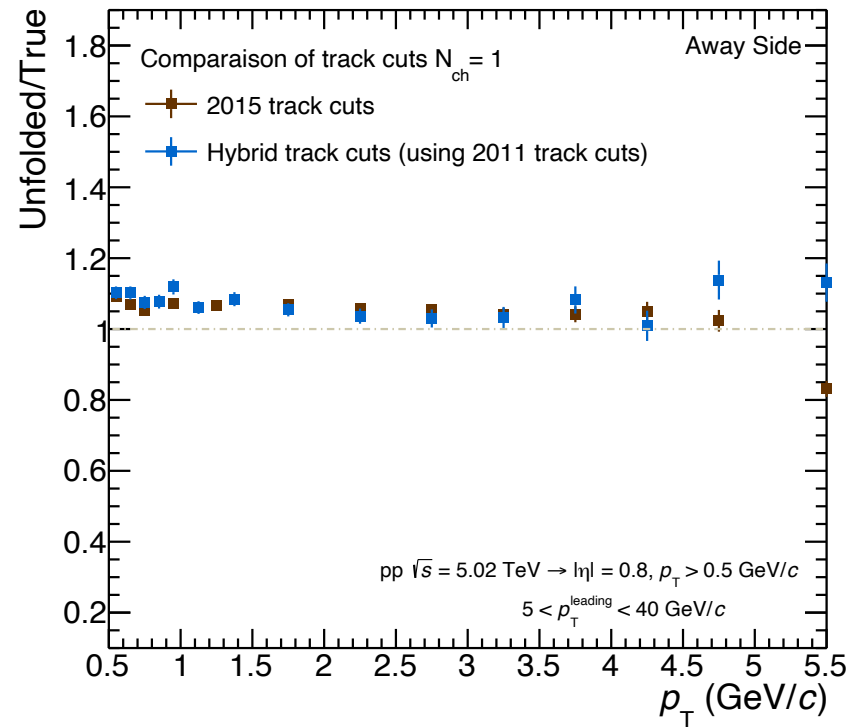

Correction factor associated with efficiency by acceptance and secondary contamination

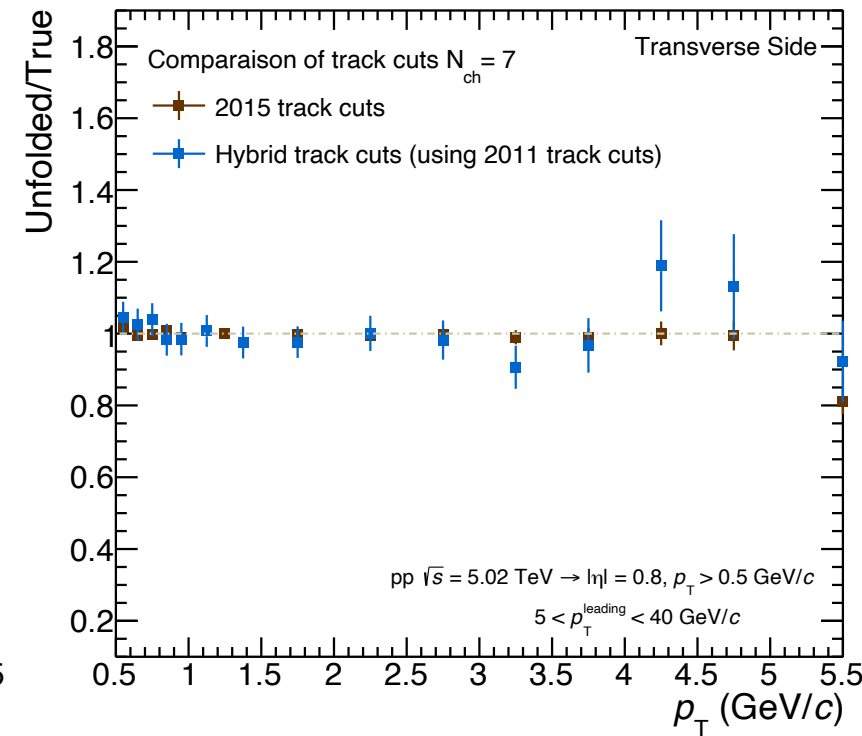

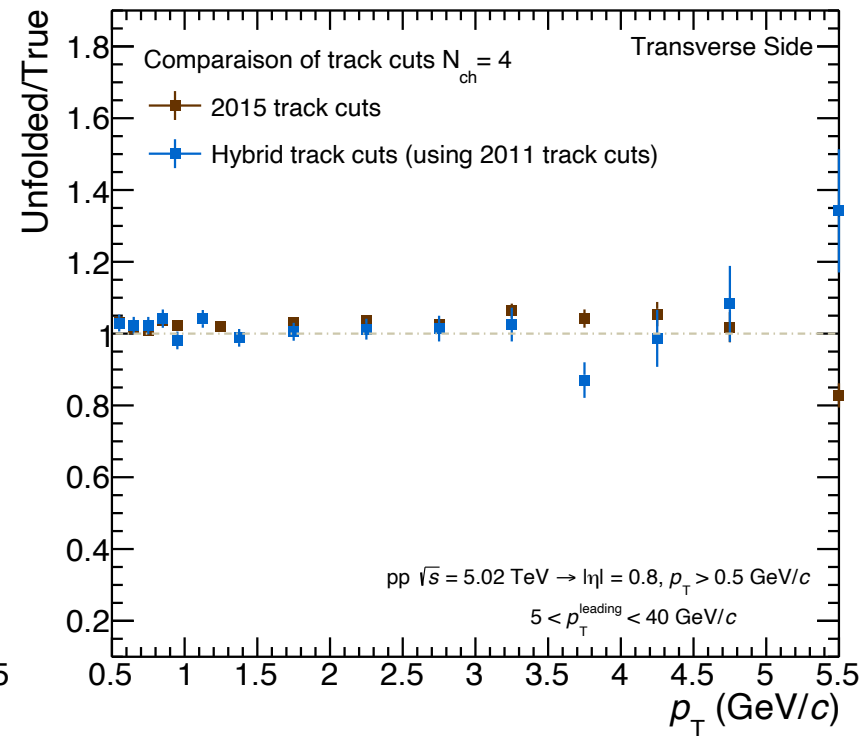

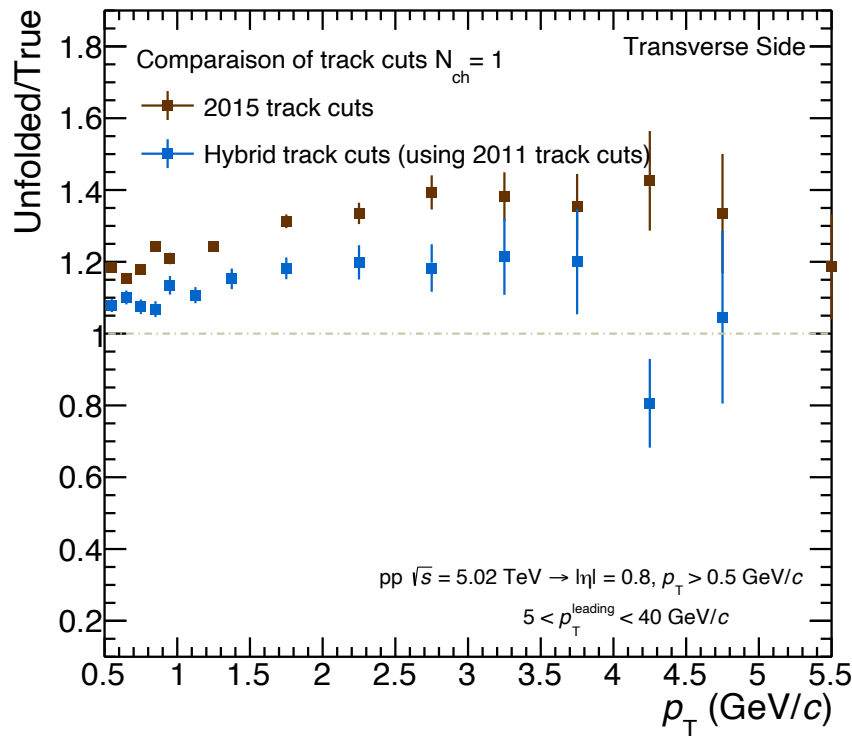

MC closure test

Away Side

Transverse Side

Next steps

- Run on GRID - MC (pp, p+Pb, Pb+Pb) with modes MC closure and normal. Also with data pp, p+Pb and Pb+Pb.
- Analyze the results.

Thank you
