Torelli groups of high-dimensional manifolds

Tuesday, August 30, 2022 5:00 PM (50 minutes)

I will explain joint work with Oscar Randal-Williams, in which we study Torelli groups of the higher-dimensional analogues of surfaces. This is done by combining the work of Galatius–Randal-Williams on stable moduli spaces of manifolds with Goodwillie–Klein–Weiss embedding calculus. Particular attention will be given to the relationship between our results and graph complexes.

Presenter: KUPERS, Alexander (Toronto)
