Partial replacement of Firewall

Bruno Hoeft
Reducing the complexity by removing the central Firewall
Replace central Firewall hostbased firewall → for WorkerNodes

- IPv6 → can go straight ahead → to ever host an ipv6 address is attached
- IPv4 →
  - currently every WorkderNode a privat address only attached (requires NAT)
  - the NAT shall get replaced by public address
- A host based firewall (ip[6]tables) shall replace the central firewall
  - Statefull expection – communication initiated from inside only

Therefore the two /22 address ranges
- 157.180.228.0/22
- 157.180.232.0/22

This are the two new bgp advertisements at LHC[OPN/ONE]
